Preface	vii
Predicting Protein Tertiary Structure using a Global Optimization Algorithm with Smoothing <i>A. Azmi, R. H. Byrd, E. Eskow, R. B. Schnabel, S. Crivelli, T. M. Philip and T. Head-Gordon</i>	1
Methodology for Elucidating the Folding Dynamics of Peptides : Met-enkephalin Case Study <i>J. L. Klepeis and C. A. Floudas</i>	19
Energy Landscape Projections of Molecular Potential Functions <i>A. T. Phillips, J. B. Rosen and K. A. Dill</i>	47
Global Optimization and Sampling in the Context of Tertiary Structure Prediction: A Comparison of Two Algorithms <i>V. A. Eyrich, D. M. Standley and R. A. Friesner</i>	57
Protein Folding Simulations by Monte Carlo Simulated Annealing and Multicanonical Algorithm <i>Y. Okamoto</i>	73
Thermodynamics of Protein Folding - The Generalized-Ensemble Approach <i>U. H. E. Hansmann</i>	91
An approach to detect the dominant folds of proteinlike heteropolymers from the statistics of a homopolymeric chain <i>E. D. Nelson, P. G. Wolynes and J. N. Onuchic</i>	107
Gene Sequences are Locally Optimized for Global mRNA Folding <i>W. Seffens and D. Digby</i>	131
Structure Calculations of Symmetric Dimers using Molecular Dynamics/Simulated Annealing and NMR Restraints: The Case of the RII α Subunit of Protein Kinase A <i>D. Morikis, M. G. Newlon and P. A. Jennings</i>	141
Structure Prediction of Binding Sites of MHC Class II Molecules based on the Crystal of HLA-DRB1 and Global Optimization <i>M. G. Ierapetritou, I. P. Androulakis, D. S. Monos and C. A. Floudas</i>	157
A Coupled Scanning and Optimization Scheme for Analyzing Molecular Interactions <i>J. C. Mitchell, A. T. Phillips, J. B. Rosen and L. F. Ten Eyck</i>	191
Improved Evolutionary Hybrids for Flexible Ligand Docking in AutoDock <i>W. E. Hart, C. Rosin, R. K. Belew and G. M. Morris</i>	209

Electrostatic Optimization in Ligand Complementarity and Design <i>E. Kangas and B. Tidor</i>	231
Exploring potential solvation sites of proteins by multistart local minimization <i>S. Dennis, C. J. Camacho and S. Vajda</i>	243
On relative position of two biopolymer molecules minimizing the weighted sum of interatomic distances squared <i>A. B. Bogatyrev</i>	263
Visualization of Chemical Databases Using the Singular Value Decomposition and Truncated-Newton Minimization <i>D. Xie and T. Schlick</i>	267
Optimization of Carbon and Silicon Cluster Geometry for Tersoff Potential using Differential Evolution <i>M. M. Ali and A. Törn</i>	287
D.C. Programming Approach for Large-Scale Molecular Optimization via the General Distance Geometry Problem <i>Le Thi Hoai An and Pham Dinh Tao</i>	301
