Contents

Applications of curves over finite fields
MICHAEL D. FRIED ix

1. Beyond Weil bounds; curves with many rational points 1

Curve sequences with asymptotically many rational points
HAROLD NIEDERREITER AND CHAOPING XING 3

Shimura curves over finite fields and their rational points
YASUTAKA IHARA 15

Distribution of minimal ideals in imaginary quadratic function fields
DAVID R. HAYES 25

Division points of Drinfeld modules and special values of Weil L-functions
ZESEN CHEN 31

Constructing curves over finite fields with many points by solving linear equations
GERARD VAN DER GEER AND MARCEL VAN DER VLUGT 41

On maximal curves having classical Weierstrass gaps
ARNALDO GARCIA AND FERNANDO TORRES 49

2. Monodromy groups of characteristic p covers 61

Twice more nice equations for nice groups
SHREERAM S. ABHYANKAR AND PAUL A. LOOMIS 63

Linearized algebra and finite groups of Lie type: I: Linear and symplectic groups
NOAM D. ELKIES 77

Regular realization of Abelian groups with controlled ramification
PIERRE DÈBES 109

On reduction of covers of arithmetic surfaces
MICHEL EMSALEM 117

Function field sieve method for discrete logarithms over finite fields
LEONARD M. ADLEMAN AND MING-DEH HUANG 133

3. Zeta functions and trace formulas 145

A quick introduction to Dwork's conjecture
DAQING WAN 147

On the degree of the zeta function of a complete intersection
ALAN ADOLPHSON AND STEVEN SPERBER 165

The modular points of a genus 2 quotient of $X_0(67)$
FRANCK LEPRÉVOST 181

Function fields: Arithmetic and applications
CHING-LI CHAI AND WEN-CHING WINNIE LI 189

Spanning trees in subgraphs of lattices
FAN CHUNG 201

Average rank for elliptic curves and a conjecture of Nagao
MICHAEL ROSEN 221
