Contents

Preface ix

Introduction 1

Chapter 1. Questions and Speculations 5
1.1. The filtrations 5
1.2. Dependence on the projective imbedding 6
1.3. The "Strong Lefschetz" mapping in Lawson Homology 6
1.4. Equivalence relations on algebraic cycles 7
1.5. Stabilized homotopy of moduli spaces 7
1.6. Joins and Resultants 8

Chapter 2. Abelian monoid varieties 9
2.1. Monoids 9
2.2. Limits 9
2.3. Directed systems attached to an abelian monoid 10
2.4. Limits of covariant functors 11
2.5. Bi-algebras 13
2.6. Abelian group completions 14
2.7. Constructing $\varinjlim H_*(\mathcal{M})$ from $H_*(M)$ 16
2.8. Base points 19
2.9. Primitive elements 20
2.10. Mixed Hodge Structure 22

Chapter 3. Chow varieties and Lawson homology 25
3.1. The Chow variety 25
3.2. Functoriality and Chow varieties 26
3.3. Functoriality: algebraic context 32
3.4. The additive monoid 35
3.5. Lawson homology 36

Chapter 4. Correspondences and Lawson homology 39
4.1. Correspondence homomorphisms 39

4.2. The Chow correspondence homomorphism 41
4.3. The Chow correspondence homomorphism and Lawson homology 44

Chapter 5. "Multiplication" of algebraic cycles 47
5.1. The multiplicative structure on Chow varieties 47
5.2. Bilinear pairings on group completions 50
5.3. The multiplicative structure on Lawson homology 51
5.4. The ring structure on Lawson homology of $\mathbf{P}^0$ 53

Chapter 6. Operations in Lawson homology 55
6.1. The structure of the algebra $\mathcal{A}$ 55
6.2. A "geometric" description of s 58
6.3. A homological description of iterates of s 58
6.4. The connection between s and the correspondence homomorphism 60
6.5. The operator σ_j and the Chow correspondence homomorphism 62
6.6. The operator h 63

Chapter 7. Filtrations 67
7.1. The Hodge Filtration 67
7.2. The Geometric filtration 67
7.3. The Topological filtration 68
7.4. The Correspondence subspace 68
7.5. Equality of correspondence and topological filtrations 70

Appendix A. Mixed Hodge Structures, Homology, and Cycle classes 73
A.1. Mixed Hodge Structure on homology and cohomology 73
A.2. Homology and cohomology of smooth varieties 74
A.3. Cycle classes in homology 75
A.4. Change of cycle class under l.c.i. morphisms 76
A.5. Relation to birational change of correspondence 77
A.6. Correspondences and suspensions 78

Appendix B. Trace maps and the Dold-Thom Theorem 81
B.1. The inverse image mapping on homology attached to a "weighted map" 81
B.2. The Dold-Thom theorem 85

Appendix Q. On the group completion of a simplicial monoid 89
Q.1. Rings of fractions 90
Q.2. Grading of RS^{-1} 91
Q.3. The Eilenberg-Moore spectral sequence 92
Q.4. A comparison lemma 94
Q.5. Good simplicial monoids 95
Q.6. Homology of the group completion 97

Q.7. Applications to K-theory 98
Q.8. A theorem of Mather 102
Q.9. The group completion theorem in Segal's setup 103
References for Appendix Q 105

Bibliography 107
