Fröhlich, A. (Albrecht), 1916 –

Galois module structure of algebraic integers.

(Ergebnisse der Mathematik und ihrer Grenzgebiete; 3. Folge, v. 1)

Bibliography: p. Includes index.

1. Algebraic number theory. 2. Galois theory. 3. Integral representations. I. Title. II. Series.

QA247.F76. 1983. 512.74. 82-19588

ISBN-13:978-3-642-68818-8 (U.S.)

Acknowledgement

My thanks are due to the Springer-Verlag for their patience and cooperation, to Mrs. Bunn for typing the whole book with her customary perfection, to Steve Ullom and Jan Brinkhuis and to the Bordeaux collective for proof-reading the typescript, and to Martin Taylor who read the manuscript draft and who made many suggestions leading to improvements of the presentation.

Table of Contents

Introduction	1
Notation and Conventions	3
I. Survey of Results	7
§1. The Background	7
§2. The Classgroup	17
§3. Ramification and Module Structure	26
§4. Resolvents	28
§5. L -Functions and Galois Gauss Sums	32
§6. Symplectic Root Numbers and the Class $U_{N/K}$	43
§7. Some Problems and Examples	47
Notes to Chapter I.	49
II. Classgroups and Determinants	53
§1. Hom-Description	53
§2. Localization	59
§3. Change in Basefield and Change in Group	61
§4. Reduction mod l and Some Computations	65
§5. The Logarithm for Group Rings	74
§6. Galois Properties of the Determinant	84
Notes to Chapter II	96
III. Resolvents, Galois Gauss Sums, Root Numbers, Conductors	102
§1. Preliminaries	102
§2. Localization of Galois Gauss Sums and of Resolvents	108
§3. Galois Action	117
§4. Signatures	123
§5. The Local Main Theorems	127
§6. Non-Ramified Base Field Extension	129
§7. Abelian Characters, Completion of Proofs	134
§8. Module Conductors and Module Resolvents	141
Notes to Chapter III.	144

IV. Congruences and Logarithmic Values	148
§1. The Non-Ramified Characteristic	148
§2. Proof of Theorem 31	158
§3. Reduction Steps for Theorem 30	162
§4. Strategy for Theorem 32	169
§5. Gauss Sum Logarithm	178
§6. The Congruence Theorems	180
§7. The Arithmetic Theory of Tame Local Galois Gauss Sums	186
Notes to Chapter IV.	198
V. Root Number Values	199
§1. The Arithmetic of Quaternion Characters.	199
§2. Root Number Formulae	203
§3. Density Results	207
§4. The Distribution Theorem	211
VI. Relative Structure	219
§1. The Background	219
§2. Galois Module Structure and the Embedding Problem.	222
§3. An Example	228
§4. Generalized Kummer Theory.	231
§5. The Generalized Class Number Formula and the Generalized Stickelberger Relation.	237
Appendix	249
Literature List.	254
List of Theorems	259
Some Further Notation	260
Index.	261
