Cartesian Currents in the Calculus of Variations I

Cartesian Currents

Springer

Contents

Volume I. Cartesian Currents

1.	General Measure Theory	1
1	General Measure Theory	1
1.1	Measures and Integrals	1
	(σ -measures and outer measures, measurable sets, Carathéodory measures. Measurable functions. Lebesgue's integral. Egoroff's, Beppo Levi's, Fatou's and Lebesgue's theorems. Product measures and Fubini-Tonelli theorem)	
1.2	Borel Regular and Radon Measures	10
	(Borel functions and measures, Radon measures. Carathéodory's criterion in metric spaces. Vitali-Carathéodory theorem. Lusin's theorem)	
1.3	Hausdorff Measures	12
	(Hausdorff measures and Hausdorff dimension, spherical measures. Isodiametric inequality. Cantor sets and Cantor-Vitali functions. Carathéodory construction. Hausdorff measure of a product)	
1.4	Lebesgue's, Radon-Nikodym's and Riesz's Theorems	23
	(Lebesgue's decomposition theorem, Radon-Nikodym differentiation theorem. Vector valued measures and Riesz representation theorem)	
1.5	Covering Theorems, Differentiation and Densities	29
	(Vitali's and Besicovitch's covering theorems. Symmetric differentiation and Radon-Nikodym theorem. Densities. Approximate limits and measurability. Densities and Hausdorff measure)	
2	Weak Convergence	36
2.1	Weak Convergence of Vector Valued Measures	36
	(Definitions. Banach-Steinhaus theorem and the compactness theorem. Convergence as measures and L^1 -weak convergence. Lebesgue's theorem about weak convergence in L^1)	
2.2	Typical Behaviours of Weakly Converging Sequences	40
	(Oscillation, concentration. distribution, and concentration-distribution. Nonlinearity destroys the weak convergence)	
2.3	Weak Convergence in L^q , $q > 1$	44
	(Weak convergence in L^p and weak and weak* convergence on Banach spaces. Riemann-Lebesgue's lemma. Radon-Riesz theorem and variants)	
2.4	Weak Convergence in L^1	50
	(The proof of Lebesgue theorem on weak convergence in L^1 . Weak convergence of the product)	
2.5	Concentration: Weak Convergence of Measures	55
	(The universal character of the concentration-distribution phenomenon. The concentration-compactness lemma)	
2.6	Oscillations: Young Measures	58
	(Equivalent definitions of Young measures. Examples)	
2.7	More on Weak Convergence in L^1	64
	(Convergence in the sense of biting and convergence of the absolutely continuous parts)	
3	Notes	67

2.	Integer Multiplicity Rectifiable Currents	69
1	Area and Coarea. Countably n -Rectifiable Sets	69
1.1	Area and Coarea Formulas for Linear Maps	69
	(Polar decomposition theorem. Area and change of variable formula for linear maps. Coarea formula for linear maps. Cauchy-Binet formula)	
1.2	Area Formula for Lipschitz Maps	74
	(Area formula for smooth and for Lipschitz maps: curves, graphs of codimension one, parametric hypersurfaces, submanifolds, and graphs of higher codimension)	
1.3	Coarea Formula for Lipschitz Maps	82
	(Coarea formula for smooth and for Lipschitz maps. C^1 -Sard type theorem)	
1.4	Rectifiable Sets and the Structure Theorem	90
	(Countably n -rectifiable and n -rectifiable sets. The approximate tangent space of sets and measures. The rectifiability theorem for Radon measures. Besicovitch-Federer structure theorem)	
1.5	The General Area and Coarea Formulas	99
	(Area and coarea formulas for sets on manifolds and for rectifiable sets. The divergence theorem)	
2	Currents	103
2.1	Multivectors and Covectors	104
	(k -vectors, exterior product of multivectors, simple k -vectors. Duality between k -vectors and covectors. Inner product of multivectors. Simple k -vectors and oriented k -planes. Simple n -vectors in the Cartesian product $\mathbb{R}^n \times \mathbb{R}^N$. Characterization of simple n -vectors in $\mathbb{R}^n \times \mathbb{R}^N$. Induced linear transformations)	
2.2	Differential Forms	118
	(Exterior differentiation, pullback, forms in a Cartesian product. Integration of differential forms)	
2.3	Currents: Basic Facts	122
	(Currents and weak convergence of currents. Boundary and support of currents. Product of currents. Currents with finite mass, currents which are representable by integration. Lower semicontinuity of the mass. Compactness-closure theorem for currents with locally finite mass. n -dimensional currents in \mathbb{R}^n and BV functions. The constancy theorem. Examples. Image of a current under a Lipschitz map. The homotopy formula)	
2.4	Integer Multiplicity Rectifiable Currents	136
	(Currents carried by smooth graphs. Rectifiable and integer multiplicity rectifiable currents. The closure theorem for integer multiplicity 0-dimensional and 1-dimensional rectifiable currents. Examples. Image of a rectifiable current under a Lipschitz map. The Cartesian product of rectifiable currents)	
2.5	Slicing	151
	(Slices of codimension one. Slices of codimension larger than one)	
2.6	The Deformation Theorem and Approximations	157
	(The deformation theorem. Isoperimetric inequality. Weak and strong polyhedral approximations. The strong approximation theorem for normal currents)	
2.7	The Closure Theorem	161
	(The classical proof: slicing lemma, the boundary rectifiability theorem, the rectifiability theorem. White's proof)	
3	Notes	173
3.	Cartesian Maps	175
1	Differentiability of Non Smooth Functions	179

1.1	The Maximal Function and Lebesgue's Differentiation Theorem	180
	(The distribution function. Hardy-Littlewood maximal function and inequality. Lebesgue's differentiation theorem. Lebesgue's points. The Hausdorff dimension of the set of non Lebesgue points. Calderón-Zygmund decomposition argument. The class $L \log L$)	
1.2	Differentiability Properties of $W^{1,p}$ Functions	192
	(Differentiability in the L^p sense. Calderón-Zygmund theorem. Morrey-Sobolev theorem)	
1.3	Lusin Type Properties of $W^{1,p}$ Functions	202
	(Kirszbraun and Rademacher theorems. Lusin type theorems for Sobolev functions. Whitney extension theorem. Liu's theorem)	
1.4	Approximate Differential and Lusin Type Properties	210
	(Approximate continuity and approximate differentiability. Lusin type properties are equivalent to the approximate differentiability)	
1.5	Area Formulas, Degree, and Graphs of Non Smooth Maps	218
	(Area formula, graphs and degree for non smooth maps. Rado'-Reichelderfer theorem)	
2	Maps with Jacobian Minors in L^1	228
2.1	The Class $\mathcal{A}^1(\Omega, \mathbb{R}^N)$, Graphs and Boundaries	229
	(The class $\mathcal{A}^1(\Omega, \mathbb{R}^N)$. The current integration over the graph. Convergence of graphs and minors)	
2.2	Examples	233
	(The map $x/ x $. Homogeneous maps: boundary and degree)	
2.3	Boundaries and Integration by Parts	238
	(Approximate differential and distributional derivatives. Analytic formulas for boundaries. Boundary and pull-back)	
2.4	More on the Jacobian Determinant	247
	(Maps in $W^{1,n-1}$. The distributional determinant. Isoperimetric inequality for the determinant. The class $\mathcal{A}_{p,q}$ and $\mathcal{A}_{n-1,n/(n-1)}$. Higher integrability of the determinant. BMO and Hardy space $\mathcal{H}^1(\mathbb{R}^n)$)	
2.5	Boundaries and Traces	265
	(The boundary of a current integration over a graph and the trace in the sense of Sobolev. Weak and strong anchorage)	
3	Cartesian Maps	276
3.1	Weak Continuity of Minors	277
	(Weak convergence of minors in L^1 , as measures, and convergence of graphs. Examples. Reshetnyak's theorem)	
3.2	The Class $\text{cart}^1(\Omega, \mathbb{R}^N)$: Closure and Compactness	285
	(The class of Cartesian maps. The closure theorem. A compactness theorem)	
3.3	The Classes $\text{cart}^p(\Omega, \mathbb{R}^N)$, $p > 1$.	293
	(The class $\text{cart}^p(\Omega, \mathbb{R}^N)$: closure and compactness theorems.)	
4	Approximability of Cartesian Maps	296
4.1	The Transfinite Inductive Process	299
	(Ordinal numbers. The transfinite inductive process and the weak sequential closure of a set)	
4.2	Weak and Strong Approximation of Minors	303
	(Sequential weak closure and strong closure of smooth maps in the class of Cartesian maps. $\text{Cart}^1(\Omega, \mathbb{R}^N) = \text{CART}^1(\Omega, \mathbb{R}^N) \subset \text{cart}^1(\Omega, \mathbb{R}^N)$)	
4.3	The Join of Cartesian Maps	313
	(Composition and join of Cartesian maps. Weak continuity of the join)	
5	Notes	318

4.	Cartesian Currents in Euclidean Spaces	323
1	Functions of Bounded Variation	327
1.1	The Space $BV(\Omega, \mathbb{R})$	329
	(The total variation. Semicontinuity. Approximation by smooth functions. A variational characterization of BV . Sobolev and Poincaré inequalities. Compactness. Fleming–Rishel formula)	
1.2	Caccioppoli Sets	340
	(Sets of finite perimeter. Isoperimetric inequality. Approximation by smooth open sets)	
1.3	De Giorgi's Rectifiability Theorem	346
	(Reduced boundary. De Giorgi's rectifiability theorem. Measure theoretic boundary. Federer's characterization of Caccioppoli sets)	
1.4	The Structure Theorem for BV Functions	354
	(Jump points and jump sets. Regular and singular points. The structure of the measure total variation. Lebesgue's points and approximate differentiability of BV -functions)	
1.5	Subgraphs of BV Functions	371
	(Characterization of BV functions in terms of their subgraphs; jump and Cantor part of Du in terms of the reduced boundary of the subgraph of u)	
2	Cartesian Currents in Euclidean Spaces	379
2.1	Limit Currents of Smooth Graphs	380
	(Toward the definition of Cartesian currents)	
2.2	The Classes $\text{cart}(\Omega \times \mathbb{R}^N)$ and $\text{graph}(\Omega \times \mathbb{R}^N)$	384
	(Cartesian currents and graph-currents)	
2.3	The Structure Theorem	391
	(The structure theorem. The map associated to a Cartesian current. Weak convergence of Cartesian currents)	
2.4	Cartesian Currents in Codimension One	403
	(BV functions as Cartesian currents and representation formulas. Cantor–Vitali functions. SBV functions)	
2.5	Examples of Cartesian Currents	411
	(Bubbling off of circles, spheres, tori. Attaching cylinders. Examples of vector-valued BV functions. A Cartesian current with a Cantor mass on minors. A Cartesian current which cannot be approximated weakly by smooth graphs)	
2.6	Radial Currents	439
	(Currents associated to radial maps $u(x) = U(x)x/ x $. A closure theorem)	
3	Degree Theory	450
3.1	n -Dimensional Currents and BV Functions	451
	(Representation formula and decomposition theorem for n -dimensional currents in \mathbb{R}^n . Constancy theorem and linear projections of normal currents)	
3.2	Degree Mapping and Degree of Cartesian Currents	460
	(Definition and properties of the degree for Cartesian currents and maps)	
3.3	The Degree of Continuous Maps	471
	(The degree of continuous Cartesian maps agrees with the classical degree for continuous maps)	
3.4	h -Connected Components and the Degree	474
	(Homologically connected components of a Caccioppoli set)	
4	Notes	479

5. Cartesian Currents in Riemannian Manifolds	493
1 More About Currents	494
1.1 The Deformation Theorem	494
(Proof of Federer and Fleming deformation theorem and of the strong approximation theorem)	
1.2 Mollifying Currents	505
(ϵ -mollified of forms and currents. A representation formula for normal currents)	
1.3 Flat Chains	512
(Integral flat and flat chains and norms. Image of a flat chain. Federer's flatness theorem. Mollification and a representation formula for flat chains. Federer's support theorem. Cochains)	
2 Differential Forms and Cohomology	527
2.1 Forms on Manifolds	528
(Tangent and cotangent bundle. Null forms to a submanifold)	
2.2 Hodge Operator	531
(Interior multiplication of vectors and covectors. Hodge operator. The L^2 inner product for forms)	
2.3 Sobolev Spaces of Forms	536
(The classes $L^2_p(X)$ and $W^{1,2}_p(X)$)	
2.4 Harmonic Forms	538
(The codifferential δ . Laplace-Beltrami operator on forms and the Dirichlet integral. Their expressions in local coordinates)	
2.5 Hodge and Hodge-Kodaira-Morrey Theorems	543
(Gaffney Lemma. Hodge-Kodaira-Morrey decomposition theorem. De Rham cohomology groups. Hodge representation theorem for cohomology classes)	
2.6 Relative Cohomology: Hodge-Morrey Decomposition	549
(Collar theorem. Tangential and normal part of a form. Coboundary operator. The lemma of Gaffney at the boundary. Hodge-Morrey decomposition. Hodge representation theorem of relative cohomology classes)	
2.7 Weitzenböck Formula	559
(Connections and covariant derivatives. Levi-Civita connection. Second covariant derivatives. Curvature tensor and Laplace-Beltrami operator on forms)	
2.8 Poincaré and Poincaré-Lefschetz Dualities in Cohomology	565
(De Rham cohomology groups. Poincaré duality. Relative cohomology groups on manifolds with boundary. Cohomology long sequence. Poincaré Lefschetz duality)	
3 Currents and Real Homology of Compact Manifolds	570
3.1 Currents on Manifolds	572
(Currents in X . Flatness and constancy theorems)	
3.2 Poincaré and de Rham Dualities	574
(Isomorphism of $(n - k)$ cohomology groups and k homology groups. Integration along fibers. Poincaré dual form. de Rham duality between cohomology and homology. Periods. Normal currents and classical real homology)	
3.3 Poincaré-Lefschetz and de Rham Dualities	589
(Relative homology. Homology long sequence. Poincaré-Lefschetz duality theorem. De Rham theorem for manifolds with boundary. Relative real homology classes are represented by minimal cycles)	
3.4 Intersection of Currents and Kronecker Index	599
(Intersection of normal currents in \mathbb{R}^n and on submanifolds of \mathbb{R}^n . Intersection of cycles is the wedge product of Poincaré duals. Kronecker index. Intersection index)	

3.5	Relative Homology and Cohomology Groups	608
	(Homology and cohomology in the Lipschitz category. Closure of cosets. Generalized de Rham theorem)	
4	Integral Homology	615
4.1	Integral Homology Groups	615
	(Integral homology groups. Integral relative homology groups. Isoperimetric inequalities and weak closure. Torsion groups. Integral and real homology)	
4.2	Intersection in Integral Homology	624
	(Intersection of cycles on boundaryless manifolds. Intersection of cycles on manifolds with boundary. Intersection index in integral homology. An algebraic view of integral homology)	
5	Maps Between Manifolds	631
5.1	Sobolev Classes of Maps Between Riemannian Manifolds .	632
	(Density results of Schoen-Uhlenbeck and Bethuel. d -homotopy White's results)	
5.2	Cartesian Currents Between Manifolds	640
	(Approximate differentiability. Area formula. Graphs. Cartesian currents. The class $\text{cart}^{2,1}(\Omega \times \mathcal{Y})$)	
5.3	Homology Induced Maps: Manifolds Without Boundary ..	648
	(Homology and cohomology maps associated to a Cartesian current)	
5.4	Homology Induced Maps: Manifolds with Boundary	658
	(Homology and cohomology maps associated to flat chains)
