

JEAN-YVES GIRARD

PROOF THEORY
AND
LOGICAL COMPLEXITY

VOLUME I

BIBLIOPOLIS

CONTENTS

<i>Foreword</i>	9
Background & Notation	21
INTRODUCTION: ELEMENTARY PROOF THEORY	29
1. The Fall of Hilbert's program	33
Hilbert's program, 33. Recursive functions, 38. The first incompleteness theorem, 52. The second incompleteness theorem, 66. Exercises, 77. Annex: Intuitionism, 82.	
PART I: \sum_1^0 PROOF THEORY	91
2. The calculus of sequents	95
Definitions, 97. Completeness of the sequent calculus, 102. The cut-elimination theorem, 105. The subformula property, 114. Intuitionistic sequent calculus, 115. Herbrand's theorem, 118. Generalization, 123. Annex: Natural deduction, 126. The Church-Rosser property, 135. Strong normalization, 150.	
3. The semantics of sequent calculus	161
Completeness of the cut-free rules, 162. Three-valued models, 168. Three-valued logic, 172. Annex: Takeuti's conjecture, 176. Limitations of Takeuti's conjecture, 183. Three-valued equivalence, 202. Cut-free analysis, 204. Three-valued semantics and generalized logics, 205.	
4. Applications of the «Hauptsatz»	209
The interpolation lemma, 209. The reflection schema of PA, 215. Elementary consistency proofs, 226. 1-consistency, 228. Annex: The <i>Hauptsatz</i> in a concrete case, 237. Normalization in HA, 251. Normalization for NL^2J , 269.	
PART II: \prod_1^1 PROOF THEORY	285
5. \prod_1^1 formulas and well-foundedness	289
The projective hierarchy, 289. Well-founded trees, 294. Well-orders, 297. Equivalents of $(\sum_1^0\text{-CA}^*)$, 299. Recursive well-orders, 311. Hyperarithmetical sets, 316. Annex: Kleene's \mathcal{O} , 321. Hierarchies indexed by \mathcal{O} , 329. Paths through \mathcal{O} , 335. The classification problem, 339.	

6. The ω-rule	347
<p>ω-logic, 347. The cut-elimination theorem, 362. Bounds for cut-elimination, 375. Equivalents for $(\sum_1^0\text{-CA}^*)$, 381. Annex: The calculus $L_{\omega_1\omega}$, 388. Cut-elimination in $L_{\omega_1\omega}$, 393.</p>	
7. The ordinal ε_0 and arithmetic	411
<p>Ordinal analysis of PA, 411. Extensions to other systems, 422. Ordinals and theories, 435. Annex: Gödel's system \mathcal{C}, 442. Functional interpretation, 459. Spector's interpretation, 476. No counterexample interpretation, 479. An application, 483.</p>	
Bibliography	497
Analytical Index	501
