

Contents

Part I. The Complex Mind-Brain

Chapter 1.	Dynamics, Evolution, Autopoiesis	1
	1.1. Introduction	1
	1.2. Attractors	3
	1.3. The Genetic Algorithm	7
	1.4. Magician Systems	13
	1.5. Dynamics and Pattern	16
Chapter 2.	The Psynet Model	21
	2.1. Introduction	21
	2.2. The Dual Network	22
	2.3. Evolution and Autopoiesis in the Dual Network	26
	2.4. Language and Logic	30
	2.5. Psynet AI	33
	2.6. Conclusion	38
	Appendix 1: The Psynet Model as Mathematics	39
	Appendix 2: Formal Definition of the Dual Network	41
Chapter 3.	A Theory of Cortical Dynamics	43
	3.1. Introduction	43
	3.2. Neurons and Neural Assemblies	44
	3.3. The Structure of the Cortex	47
	3.4. A Theory of Cortical Dynamics	49
	3.5. Evolution and Autopoiesis in the Brain	52
	3.6. Conclusion	55
Chapter 4.	Perception and Mindspace Curvature	57
	4.1. Introduction	57
	4.2. Producibility and Perception	58
	4.3. The Geometry of Visual Illusions	61
	4.4. Mindspace Curvature	68
	4.5. Conclusion	71

Part II. Formal Tools for Exploring Complexity

Chapter 5. Dynamics and Pattern	73
5.1. Introduction	73
5.2. Symbolic Dynamics	74
5.3. Generalized Baker Maps	78
5.4. The Chaos Language Algorithm	81
5.5. Order and Chaos in Mood Fluctuations	86
5.6. Two Possible Principles of Complex Systems Science	98
5.7. Symbolic Dynamics in Neural Networks	100
5.8. Dynamics, Pattern and Entropy	102
Chapter 6. Evolution and Dynamics	113
6.1. Introduction	113
6.2. The Dynamics of the Genetic Algorithm	115
6.3. The Simple Evolving Ecology (SEE) Model	121
6.4. The Search for Strange Attractors	127
6.6. Evolving Fractal Music	145
Chapter 7. Magician Systems and Abstract Algebras	159
7.1. Introduction	159
7.2. Magician Systems and Genetic Algorithms	160
7.3. Random Magician Systems	161
7.4. Hypercomplex Numbers and Magician Systems	166
7.5. Emergent Pattern	172
7.6. Algebra, Dynamics and Complexity	176
7.7. Some Crucial Conjectures	178
7.8. Evolutionary Implications	182

Part III. Mathematical Structures in the Mind

Chapter 8. The Structure of Consciousness	185
8.1. Introduction	185
8.2. The Neuropsychology of Consciousness	187
8.3. The Perceptual-Cognitive Loop	190
8.4. Subverting the Perceptual-Cognitive Loop	193
8.5. The Evolution of the Perceptual-Cognitive Loop	197
8.6. Hallucinations and Reality Discrimination	199
8.7. Proprioception of Thought	204
8.8. The Algebra of Consciousness	210
8.9. Modelling States of Mind	215

8.10. Mind as Pregeometry	223
8.11. Conclusion	232
Chapter 9. Fractals and Sentence Production	235
9.1. Introduction	235
9.2. L-Systems	236
9.3. Sentence Production and Thought Production	241
9.4. L-Systems and Sentence Production	246
9.5. L-Systems and Child Language Development	252
Chapter 10. Dream Dynamics	257
10.1. Introduction	257
10.2. Testing the Crick-Mitchison Hypothesis	258
10.3. A Mental Process Network Approach	261
10.4. Dreaming and Crib Death	267
Chapter 11. Artificial Selfhood	271
11.1. Introduction	271
11.2. Autopoiesis and Knowledge Representation	272
11.3. What Is the Self?	276
11.4. Artificial Intersubjectivity	280
Chapter 12. The World Wide Brain	285
12.1. Introduction	285
12.2. The World Wide Brain in the History of Computing ..	286
12.3. Design for a World Wide Brain	288
12.4. The World Wide Brain as a New Phase in Psycho-Cultural Evolution	294

Part IV. The Dynamics of Self and Creativity

Chapter 13. Subself Dynamics	299
13.1. Introduction	299
13.2. Subselves	300
13.3. I-It and I-You	303
13.4. The Fundamental Principle of Personality Dynamics ..	307
13.5. Systems Theory as a “Bridge”	309
Chapter 14. Aspects of Human Personality Dynamics	315
14.1. Introduction	315
14.2. The Laws of Love	315
14.3. The Development and Dynamics of Masochism	332

Chapter 15. On the Dynamics of Creativity 341

 15.1. Introduction 341

 15.2. The Experience of Inspiration 343

 15.3. The Creative Subself 346

 15.4. Creative Subself Dynamics 349

 15.5. Divine Inspiration and Emergent Pattern 352

 15.6. Inside the Creative Subself 356

 15.7. Conclusion 362
