	<i>Preface</i>	page xi
<b>1</b>	<b>A tour of matroids</b>	<b>1</b>
1.1	Motivation	1
1.2	Introduction to matroids	3
1.3	Geometries	11
1.4	Graphs and matroids	17
1.5	Bipartite graphs and transversal matroids	26
	Exercises	29
<b>2</b>	<b>Cryptomorphisms</b>	<b>39</b>
2.1	From independent sets to bases and back again	40
2.2	Circuits and independent sets	49
2.3	Rank, flats, hyperplanes and closure	51
2.4	Lattice of flats	61
2.5	Tying it together with the rank function	67
2.6	Cryptomorphisms between flats, hyperplanes and closure	73
2.7	Application to optimization: the greedy algorithm	81
	Exercises	87
<b>3</b>	<b>New matroids from old</b>	<b>100</b>
3.1	Matroid deletion and contraction	100
3.2	Deletion and contraction in graphs and representable matroids	108
3.3	Duality in matroids	112
3.4	Duality in graphic and representable matroids	120
3.5	Direct sums and connectivity	128
	Exercises	139
<b>4</b>	<b>Graphic matroids</b>	<b>152</b>
4.1	Graphs are matroids	153
4.2	Graph versions of matroid theorems	158
4.3	Duality and cocircuits in graphs	164

viii *Contents*

4.4	Connectivity and 2-isomorphism	168
	Exercises	173
<b>5</b>	<b>Finite geometry</b>	<b>180</b>
5.1	Affine geometry and affine dependence	181
5.2	Affine dependence	188
5.3	The projective plane $PG(2, q)$	194
5.4	Projective geometry	203
5.5	Counting $k$ -flats and $q$ -binomial coefficients	207
5.6	Abstract projective planes	212
	Exercises	214
<b>6</b>	<b>Representable matroids</b>	<b>221</b>
6.1	Matrices are matroids	221
6.2	Representing representable matroids	231
6.3	How representations depend on the field	240
6.4	Non-representable matroids	244
6.5	Representations and geometry	249
	Exercises	253
<b>7</b>	<b>Other matroids</b>	<b>261</b>
7.1	Transversal matroids	261
7.2	Transversal matroids, matching theory and geometry	264
7.3	Hyperplane arrangements and matroids	273
7.4	Cutting cheese; counting regions via deletion and contraction	281
	Exercises	287
<b>8</b>	<b>Matroid minors</b>	<b>296</b>
8.1	Examples, excluded minors and the Scum Theorem	296
8.2	Binary matroids	301
8.3	Summary of excluded minor results	310
	Exercises	316
<b>9</b>	<b>The Tutte polynomial</b>	<b>323</b>
9.1	Motivation and history	323
9.2	Definition and basic examples	324
9.3	Corank–nullity polynomial	327
9.4	Duality and direct sum	333
9.5	Tutte–Grothendieck invariants	336
9.6	The chromatic polynomial	340
	Exercises	349
	<b>Projects</b>	<b>355</b>
P.1	The number of matroids	355
P.2	Matrix-Tree Theorem	357
P.3	Relaxing a hyperplane	360

*Contents* ix

P.4	Bases and probability in affine and projective space	363
P.5	Representing affine space – the characteristic set of $AG(n, q)$	367
P.6	The card game SET® and affine geometry	371
P.7	More matroid constructions – truncation	377
<b>Appendix Matroid axiom systems</b>		<b>381</b>
A.1	Axiom lists	381
A.2	Axiom tables	382
<i>Bibliography</i>		385
<i>Index</i>		390
