Contents

Preface to the Second Edition	xv
Preface to the First Edition	xvii
Acknowledgments	xix
Chapter 1. Fundamental Concepts	1
§1.1. Elementary Properties of the Complex Numbers	1
§1.2. Further Properties of the Complex Numbers	3
§1.3. Complex Polynomials	10
§1.4. Holomorphic Functions, the Cauchy-Riemann Equations, and Harmonic Functions	14
§1.5. Real and Holomorphic Antiderivatives	17
Exercises	20
Chapter 2. Complex Line Integrals	29
§2.1. Real and Complex Line Integrals	29
§2.2. Complex Differentiability and Conformality	34
§2.3. Antiderivatives Revisited	40
§2.4. The Cauchy Integral Formula and the Cauchy Integral Theorem	43
§2.5. The Cauchy Integral Formula: Some Examples	50

§2.6. An Introduction to the Cauchy Integral Theorem and the Cauchy Integral Formula for More General Curves	53
Exercises	60
Chapter 3. Applications of the Cauchy Integral	69
§3.1. Differentiability Properties of Holomorphic Functions	69
§3.2. Complex Power Series	74
§3.3. The Power Series Expansion for a Holomorphic Function	81
§3.4. The Cauchy Estimates and Liouville's Theorem	85
§3.5. Uniform Limits of Holomorphic Functions	88
§3.6. The Zeros of a Holomorphic Function	90
Exercises	94
Chapter 4. Meromorphic Functions and Residues	105
§4.1. The Behavior of a Holomorphic Function Near an Isolated Singularity	105
§4.2. Expansion Around Singular Points	109
§4.3. Existence of Laurent Expansions	113
§4.4. Examples of Laurent Expansions	119
§4.5. The Calculus of Residues	122
§4.6. Applications of the Calculus of Residues to the Calculation of Definite Integrals and Sums	128
§4.7. Meromorphic Functions and Singularities at Infinity	137
Exercises	145
Chapter 5. The Zeros of a Holomorphic Function	157
§5.1. Counting Zeros and Poles	157
§5.2. The Local Geometry of Holomorphic Functions	162
§5.3. Further Results on the Zeros of Holomorphic Functions	166
§5.4. The Maximum Modulus Principle	169
§5.5. The Schwarz Lemma	171
Exercises	174

Chapter 6. Holomorphic Functions as Geometric Mappings	179
§6.1. Biholomorphic Mappings of the Complex Plane to Itself	180
§6.2. Biholomorphic Mappings of the Unit Disc to Itself	182
§6.3. Linear Fractional Transformations	184
§6.4. The Riemann Mapping Theorem: Statement and Idea of Proof	189
§6.5. Normal Families	192
§6.6. Holomorphically Simply Connected Domains	196
§6.7. The Proof of the Analytic Form of the Riemann Mapping Theorem	198
Exercises	202
Chapter 7. Harmonic Functions	207
§7.1. Basic Properties of Harmonic Functions	208
§7.2. The Maximum Principle and the Mean Value Property	210
§7.3. The Poisson Integral Formula	212
§7.4. Regularity of Harmonic Functions	218
§7.5. The Schwarz Reflection Principle	220
§7.6. Harnack's Principle	224
§7.7. The Dirichlet Problem and Subharmonic Functions	227
§7.8. The Perron Method and the Solution of the Dirichlet Problem	236
§7.9. Conformal Mappings of Annuli	240
Exercises	243
Chapter 8. Infinite Series and Products	255
§8.1. Basic Concepts Concerning Infinite Sums and Products	255
§8.2. The Weierstrass Factorization Theorem	263
§8.3. The Theorems of Weierstrass and Mittag-Leffler: Interpolation Problems	266
Exercises	275
Chapter 9. Applications of Infinite Sums and Products	279

§9.1. Jensen's Formula and an Introduction to Blaschke Products	279
§9.2. The Hadamard Gap Theorem	285
§9.3. Entire Functions of Finite Order	288
Exercises	296
Chapter 10. Analytic Continuation	299
§10.1. Definition of an Analytic Function Element	299
§10.2. Analytic Continuation Along a Curve	305
§10.3. The Monodromy Theorem	307
§10.4. The Idea of a Riemann Surface	310
§10.5. The Elliptic Modular Function and Picard's Theorem	314
§10.6. Elliptic Functions	323
Exercises	330
Chapter 11. Topology	335
§11.1. Multiply Connected Domains	335
§11.2. The Cauchy Integral Formula for Multiply Connected Domains	338
§11.3. Holomorphic Simple Connectivity and Topological Simple Connectivity	343
§11.4. Simple Connectivity and Connectedness of the Complement	344
§11.5. Multiply Connected Domains Revisited	349
Exercises	352
Chapter 12. Rational Approximation Theory	361
§12.1. Runge's Theorem	361
§12.2. Mergelyan's Theorem	367
§12.3. Some Remarks about Analytic Capacity	376
Exercises	379
Chapter 13. Special Classes of Holomorphic Functions	383
§13.1. Schlicht Functions and the Bieberbach Conjecture	384

§13.2. Continuity to the Boundary of Conformal Mappings	390
§13.3. Hardy Spaces	399
§13.4. Boundary Behavior of Functions in Hardy Classes [AN OPTIONAL SECTION FOR THOSE WHO KNOW ELEMENTARY MEASURE THEORY]	404
Exercises	410
Chapter 14. Hilbert Spaces of Holomorphic Functions, the Bergman Kernel, and Biholomorphic Mappings	413
§14.1. The Geometry of Hilbert Space	413
§14.2. Orthonormal Systems in Hilbert Space	424
§14.3. The Bergman Kernel	429
§14.4. Bell's Condition R	435
§14.5. Smoothness to the Boundary of Conformal Mappings	441
Exercises	444
Chapter 15. Special Functions	447
§15.1. The Gamma and Beta Functions	447
§15.2. The Riemann Zeta Function	455
Exercises	465
Chapter 16. The Prime Number Theorem	469
§16.0. Introduction	469
§16.1. Complex Analysis and the Prime Number Theorem	471
§16.2. Precise Connections to Complex Analysis	476
§16.3. Proof of the Integral Theorem	481
Exercises	482
APPENDIX A: Real Analysis	485
APPENDIX B: The Statement and Proof of Goursat's Theorem	491
References	495
Index	499
