Contents

Chapter I Introduction to Analysis of the Infinite

I.1 Cartesian Coordinates and Polynomial Functions	2
Algebra	2
“Algebra Nova”	6
Descartes’s Geometry	8
Polynomial Functions	10
Exercises	14
I.2 Exponentials and the Binomial Theorem	17
Binomial Theorem	18
Exponential Function	25
Exercises	28
I.3 Logarithms and Areas	29
Computation of Logarithms	30
Computation of Areas	33
Area of the Hyperbola and Natural Logarithms	34
Exercises	39
I.4 Trigonometric Functions	40
Basic Relations and Consequences	43
Series Expansions	46
Inverse Trigonometric Functions	49
Computation of Pi	52
Exercises	55
I.5 Complex Numbers and Functions	57
Euler’s Formula and Its Consequences	58
A New View on Trigonometric Functions	61
Euler’s Product for the Sine Function	62
Exercises	66
I.6 Continued Fractions	68
Origins	68
Convergents	71
Irrationality	76
Exercises	78

Chapter II Differential and Integral Calculus

II.1 The Derivative	81
The Derivative	81
Differentiation Rules	84
Parametric Representation and Implicit Equations	88
Exercises	89
II.2 Higher Derivatives and Taylor Series	91
The Second Derivative	91
De Conversione Functionum in Series	94
Exercises	97
II.3 Envelopes and Curvature	98
Envelope of a Family of Straight Lines	98
The Caustic of a Circle	99
Envelope of Ballistic Curves	101
Curvature	101
Exercises	105
II.4 Integral Calculus	107
Primitives	107

Applications	109
Integration Techniques	112
Taylor's Formula with Remainder	116
Exercises	117
II.5 Functions with Elementary Integral	118
Integration of Rational Functions	118
Useful Substitutions	123
Exercises	125
II.6 Approximate Computation of Integrals	126
Series Expansions	126
Numerical Methods	128
Asymptotic Expansions	131
Exercises	132
II.7 Ordinary Differential Equations	134
Some Types of Integrable Equations	139
Second Order Differential Equations	140
Exercises	143
II.8 Linear Differential Equations	144
Homogeneous Equation with Constant Coefficients	145
Inhomogeneous Linear Equations	148
Cauchy's Equation	152
Exercises	152
II.9 Numerical Solution of Differential Equations	154
Euler's Method	154
Taylor Series Method	156
Second Order Equations	158
Exercises	159
II.10 The Euler-Maclaurin Summation Formula	160
Euler's Derivation of the Formula	160
De Usu Legitimo Formulae Summatoriae Maclaurinianae	163
Stirling's Formula	165
The Harmonic Series and Euler's Constant	167
Exercises	169
Chapter III Foundations of Classical Analysis	
III.1 Infinite Sequences and Real Numbers	172
Convergence of a Sequence	172
Construction of Real Numbers	177
Monotone Sequences and Least Upper Bound	182
Accumulation Points	184
Exercises	185
III.2 Infinite Series	188
Criteria for Convergence	189
Absolute Convergence	192
Double Series	195
The Cauchy Product of Two Series	197
Exchange of Infinite Series and Limits	199
Exercises	200
III.3 Real Functions and Continuity	202
Continuous Functions	204
The Intermediate Value Theorem	206
The Maximum Theorem	206
Monotone and Inverse Functions	208
Limit of a Function	209
Exercises	210

III.4 Uniform Convergence and Uniform Continuity 213
 The Limit of a Sequence of Functions 213
 Weierstrass's Criterion for Uniform Convergence 216
 Uniform Continuity 217
 Exercises 220

III.5 The Riemann Integral 221
 Definitions and Criteria of Integrability 221
 Integrable Functions 226
 Inequalities and the Mean Value Theorem 228
 Integration of Infinite Series 230
 Exercises 232

III.6 Differentiable Functions 235
 The Fundamental Theorem of Differential Calculus 239
 The Rules of de L'Hospital 242
 Derivatives of Infinite Series 245
 Exercises 246

III.7 Power Series and Taylor Series 248
 Determination of the Radius of Convergence 249
 Continuity 250
 Differentiation and Integration 251
 Taylor Series 252
 Exercises 255

III.8 Improper Integrals 257
 Bounded Functions on Infinite Intervals 257
 Unbounded Functions on a Finite Interval 260
 Euler's Gamma Function 261
 Exercises 262

III.9 Two Theorems on Continuous Functions 263
 Continuous, but Nowhere Differentiable Functions 263
 Weierstrass's Approximation Theorem 265
 Exercises 269

Chapter IV Calculus in Several Variables

IV.1 Topology of n -Dimensional Space 273
 Distances and Norms 273
 Convergence of Vector Sequences 275
 Neighborhoods, Open and Closed Sets 278
 Compact Sets 283
 Exercises 285

IV.2 Continuous Functions 287
 Continuous Functions and Compactness 289
 Uniform Continuity and Uniform Convergence 290
 Linear Mappings 293
 Hausdorff's Characterization of Continuous Functions 294
 Integrals with Parameters 297
 Exercises 298

IV.3 Differentiable Functions of Several Variables 300
 Differentiability 302
 Counter-Examples 304
 A Geometrical Interpretation of the Gradient 305
 The Mean Value Theorem 308
 The Implicit Function Theorem 309
 Differentiation of Integrals with Respect to Parameters 311
 Exercises 313

IV.4 Higher Derivatives and Taylor Series 316
 Taylor Series for Two Variables 319

Taylor Series for n Variables	320
Maximum and Minimum Problems	323
Conditional Minimum (Lagrange Multiplier)	325
Exercises	328
IV.5 Multiple Integrals	330
Double Integrals over a Rectangle	330
Null Sets and Discontinuous Functions	334
Arbitrary Bounded Domains	336
The Transformation Formula for Double Integrals	338
Integrals with Unbounded Domain	345
Exercises	347
Appendix: Original Quotations	351
References	358
Symbol Index	369
Index	371
