|                                                                           |    |
|---------------------------------------------------------------------------|----|
| PREFACE .....                                                             | ix |
| CHAPTER 1. INTRODUCTION .....                                             | 1  |
| <b>PART 1. STABLE DOMINATION .....</b>                                    |    |
| CHAPTER 2. SOME BACKGROUND ON STABILITY THEORY .....                      | 13 |
| 2.1. Saturation, the universal domain, imaginaries .....                  | 15 |
| 2.2. Invariant types .....                                                | 17 |
| 2.3. Conditions equivalent to stability .....                             | 18 |
| 2.4. Independence and forking .....                                       | 20 |
| 2.5. Totally transcendental theories and Morley rank .....                | 23 |
| 2.6. Prime models .....                                                   | 23 |
| 2.7. Indiscernibles, Morley sequences .....                               | 24 |
| 2.8. Stably embedded sets .....                                           | 25 |
| CHAPTER 3. DEFINITION AND BASIC PROPERTIES OF $\text{St}_C$ .....         | 27 |
| CHAPTER 4. INVARIANT TYPES AND CHANGE OF BASE .....                       | 41 |
| CHAPTER 5. A COMBINATORIAL LEMMA .....                                    | 53 |
| CHAPTER 6. STRONG CODES FOR GERMS .....                                   | 59 |
| <b>PART 2. INDEPENDENCE IN ACVF .....</b>                                 |    |
| CHAPTER 7. SOME BACKGROUND ON ALGEBRAICALLY CLOSED VALUED<br>FIELDS ..... | 69 |
| 7.1. Background on valued fields .....                                    | 69 |
| 7.2. Some model theory of valued fields .....                             | 71 |
| 7.3. Basics of ACVF .....                                                 | 72 |
| 7.4. Imaginaries, and the ACVF sorts .....                                | 73 |
| 7.5. The sorts internal to the residue field .....                        | 77 |
| 7.6. Unary sets, 1-torsors, and generic 1-types .....                     | 78 |

## CONTENTS

|             |                                                             |     |
|-------------|-------------------------------------------------------------|-----|
| 7.7.        | One-types orthogonal to $\Gamma$ .....                      | 83  |
| 7.8.        | Generic bases of lattices .....                             | 85  |
| CHAPTER 8.  | SEQUENTIAL INDEPENDENCE .....                               | 87  |
| CHAPTER 9.  | GROWTH OF THE STABLE PART .....                             | 99  |
| CHAPTER 10. | TYPES ORTHOGONAL TO $\Gamma$ .....                          | 103 |
| CHAPTER 11. | OPACITY AND PRIME RESOLUTIONS .....                         | 115 |
| CHAPTER 12. | MAXIMALLY COMPLETE FIELDS AND DOMINATION .....              | 123 |
| CHAPTER 13. | INVARIANT TYPES .....                                       | 137 |
| 13.1.       | Examples of sequential independence .....                   | 137 |
| 13.2.       | Invariant types, dividing and sequential independence ..... | 143 |
| CHAPTER 14. | A MAXIMUM MODULUS PRINCIPLE .....                           | 151 |
| CHAPTER 15. | CANONICAL BASES AND INDEPENDENCE GIVEN BY MODULES .....     | 161 |
| CHAPTER 16. | OTHER HENSELIAN FIELDS .....                                | 171 |
| REFERENCES  | .....                                                       | 177 |
| INDEX       | .....                                                       | 181 |
