# Preface

Mathematical Visualization is a young field in the interdisciplinary area of numerics, geometry, and computer graphics. It develops powerful visualization tools for mathematical research and utilizes mathematical techniques for computer graphics and scientific visualization.

The present book is the second in a series of publications on this subject. The articles were presented at the international workshop "Visualization and Mathematics", held from September 16-19, 1997 in Berlin-Dahlem (Germany). Well-known experts contributed latest research material to this volume. Each paper was carefully reviewed and evaluated by an international program committee. The articles cover many topics of mathematical visualization, comprising computer graphical techniques and visualization methods, handling of meshes and polygonal data representations, as well as application of visualization techniques in geometry and numerics.

We organized the material in the following five sections although many articles can not uniquely be associated with a single category:

- Meshes, Multilevel Approximation, and Visualization
- Geometry and Numerics
- Graphics Algorithms and Implementations
- Geometric Visualization Techniques
- Vector Fields and Flow Visualization.

The themes represent most active research topics. Specifically there are new methods and experimental results for surfaces with given curvature properties, the use of Morse theory in the validation of triangle nets, and Clifford algebras for approximation of vector fields. Promising trends are new developments in the numerics on discrete geometries, the study of adaptive and hierarchical techniques in space and time, and new visualization methods for displaying mathematical structures.

We hope the book unveals new insight into the evolving and fascinating area, and the reader will become acquainted with recent developments.

We thank all authors for their contributions and all members of the program committee for their efforts and thorough reviews. Special thanks to Axel Friedrich for his help in preparing the final LaTeX manuscript. The personal interest and continuous support of Dr. Martin Peters from Springer-Verlag is very much appreciated.

Berlin, 1998

## I Meshes, Multilevel Approximation, and Visualization

---

<b>Tetrahedra Based Volume Visualization</b>	3
<i>Paolo Cignoni, Claudio Montani, Roberto Scopigno</i>	
1 Introduction .....	3
2 Volume Modeling Based on Simplicial Complexes .....	4
3 Visualization of Simplicial Complexes .....	5
4 Isosurface Fitting .....	6
5 Direct Volume Rendering Algorithms .....	7
6 Decreasing Complexity .....	13
7 Concluding Remarks .....	14
8 Acknowledgements .....	16
 <b>Mesh Optimization and Multilevel Finite Element Approximations</b>	 19
<i>Roberto Grossi, Thomas Ertl</i>	
1 Introduction .....	19
2 Mesh Reduction Techniques .....	20
3 Linear Approximation in Hilbert Spaces .....	21
4 Algorithm .....	25
5 Results .....	27
6 Conclusions .....	28
 <b>Efficient Visualization of Data on Sparse Grids</b>	 31
<i>Norbert Heußen, Martin Rumpf</i>	
1 Introduction .....	31
2 Brief Review of Functions on Sparse Grids .....	34
3 Recursive Sparse Grid Interpolation .....	36
4 Procedural Data Access .....	38
5 Estimating Higher Order Function Offsets .....	39
6 Improving Efficiency .....	42
 <b>A Meta Scheme for Iterative Refinement of Meshes</b>	 45
<i>Markus Kohler</i>	
1 Introduction .....	45
2 Meta Scheme for Subdivision .....	46

3	Analysis of the <i>Type Relation</i> . . . . .	48
4	Description of Topology and the Doubling Operator . . . . .	50
5	The Averaging Operator . . . . .	53
6	Object Linking . . . . .	56
7	Conclusion . . . . .	57

**A Scheme for Edge-based Adaptive Tetrahedron Subdivision** 61  
*Detlef Ruprecht, Heinrich Müller*

1	Introduction . . . . .	61
2	Triangle Subdivision . . . . .	63
3	Tetrahedron Subdivision . . . . .	64
4	Discussion . . . . .	67

---

**II Geometry and Numerics**

---

**Finite Element Approximations and the Dirichlet Problem for Surfaces of Prescribed Mean Curvature** 73

*Gerhard Dziuk, John E. Hutchinson*

1	$H$ -Harmonic Maps . . . . .	73
2	Discrete $H$ -Harmonic Maps . . . . .	77
3	Proof of Main Theorem . . . . .	79
4	Numerical Results . . . . .	85

**Efficient Volume-Generation During the Simulation of NC-Milling** 89

*Georg Glaeser, Eduard Gröller*

1	Introduction . . . . .	89
2	Swept Volumes . . . . .	92
3	Tool Path Generation . . . . .	97
4	The $\Gamma$ -Buffer Representation of Surfaces . . . . .	99
5	Conclusion and Future Work . . . . .	104
6	Acknowledgements . . . . .	105

**Constant Mean Curvature Surfaces with Cylindrical Ends** 107

*Karsten Große-Brauckmann, Robert B. Kusner, John M. Sullivan*

1	Immersed Examples and Almost Embeddedness . . . . .	108
2	Nonexistence Results for Cylindrical Ends . . . . .	108
3	The Necksize Problem . . . . .	110
4	Numerical Examples . . . . .	111
5	The Fundamental Domains as Truncated Triunduloids . . . . .	112
6	Conjectures . . . . .	114

Table of Contents	IX
-------------------	----

<b>Discrete Rotational CMC Surfaces and the Elliptic Billiard</b>	117
<i>Tim Hoffmann</i>	

1 Introduction . . . . .	117
2 Discrete Rotational Surfaces . . . . .	118
3 Unrolling Polygons and Discrete Rotational Surfaces . . . . .	119
4 The Standard Billiard in an Ellipse and Hyperbola . . . . .	119
5 Discrete Rotational CMC Surfaces . . . . .	120

<b>Zonotope Dynamics in Numerical Quality Control</b>	125
<i>Wolfgang Kühn</i>	

1 Discrete Dynamical Systems . . . . .	125
2 The Wrapping Effect . . . . .	127
3 Zonotopes, Intervals and the Interval Hull . . . . .	127
4 Zonotope Dynamics . . . . .	130
5 The Cascade Reduction Algorithm . . . . .	130
6 The Performance of the Cascade Reduction . . . . .	131
7 Example: The Cremona map . . . . .	131
8 Example: Langford's vector field . . . . .	132

<b>Straightest Geodesics on Polyhedral Surfaces</b>	135
<i>Konrad Polthier, Markus Schmies</i>	

1 Introduction . . . . .	135
2 Review of Geodesics on Smooth Surfaces . . . . .	137
3 Curvature of Polyhedral Surfaces . . . . .	138
4 Discrete Straightest Geodesics . . . . .	141
5 Discrete Geodesic Curvature . . . . .	144
6 Parallel Translation of Vectors . . . . .	146
7 Runge Kutta on Polyhedral Surfaces . . . . .	148
8 Conclusion . . . . .	150

---

### III Graphics Algorithms and Implementations

---

<b>Support of Explicit Time and Event Flows in the Object-Oriented Visualization Toolkit MAM/VRS</b>	153
--	-----

*Jürgen Döllner, Klaus Hinrichs*

1 Architectural Limitations of Visualization Software . . . . .	153
2 Graphics Objects: Basic Visualization Entities . . . . .	154
3 Behavior Graphs: Time and Event Flows . . . . .	157
4 Example: An Animated, Interactive 3D Viewer . . . . .	161
5 Implementation . . . . .	164
6 Conclusions and Future Work . . . . .	165

<b>A Survey of Parallel Coordinates</b>	167
<i>Alfred Inselberg</i>	
1 In the Spirit of Descartes .....	167
2 Duality in 2-D .....	168
3 Lines, p-flats and Polytopes in $R^N$ .....	171
4 Representation Mapping .....	176
5 Hypersurfaces .....	177
 <b>Hierarchical Techniques for Global Illumination Computations</b>	
– Recent Trends and Developments 181	
<i>Philipp Slusallek, Marc Stamminger, Hans-Peter Seidel</i>	
1 Introduction .....	181
2 Fundamentals .....	182
3 Hierarchical Techniques .....	184
4 Clustering .....	188
5 Refiners Based on Bounded Transport .....	190
6 Conclusions .....	192
 <b>Two-Dimensional Image Rotation</b> 195	
<i>Ivan Sterling, Thomas Sterling</i>	
1 Introduction .....	195
2 Mathematical Statement of the Problem .....	196
3 Notation .....	197
4 The P Array .....	197
5 The T-Scheme .....	200
6 The Modified T-Scheme .....	200
7 Periodicity .....	201
8 Lower Bounds .....	201
9 Optimal Cases .....	204
10 Non-optimal Cases .....	205
11 Miscellaneous Comments and Questions .....	206
 <b>An Object-Oriented Interactive System for Scientific Simulations: Design and Applications</b> 207	
<i>A.C. Telea, C.W.A.M. van Overveld</i>	
1 Introduction .....	207
2 Previous Work .....	208
3 Conceptual Model and Design of the Simulation System .....	209
4 A Finite Elements Object-Oriented Library .....	214
5 Structure of a Generic FE Simulation .....	214
6 Example of Modelling a PDE: The Wave Equation .....	216
7 Use of the Simulation System in Engineering Problems .....	218
8 Conclusion .....	218

---

**IV Geometric Visualization Techniques**

---

<b>Auditory Morse Analysis of Triangulated Manifolds</b>	223
<i>Ulrike Axen, Herbert Edelsbrunner</i>	
1 Audio as an Experimental and Analytic Tool .....	223
2 Wave Traversal .....	224
3 Wave Traversal as a Morse Function .....	230
4 Computation of Waves, Critical Points and Sound.....	234
<b>Computing Sphere Eversions</b>	237
<i>George Francis, John M. Sullivan, Chris Hartman</i>	
1 Introduction .....	237
2 Symmetric Eversions Driven by Willmore Energy .....	238
3 Visualizing the Double Locus Surface of an Eversion.....	245
4 Level Curve Methods for Everting Spheres .....	250
<b>Morse Theory for Implicit Surface Modeling</b>	257
<i>John C. Hart</i>	
1 Introduction .....	257
2 The Problem of Modeling with Implicit Surfaces .....	257
3 Morse Theory .....	260
4 Application to Implicit Surfaces .....	263
5 Conclusion .....	267
<b>Special Relativity in Virtual Reality</b>	269
<i>René T. Rau, Daniel Weiskopf, Hanns Ruder</i>	
1 Introduction .....	269
2 Special Relativistic Transformation .....	270
3 Special Relativistic Rendering .....	271
4 Virtual Reality for Relativistic Flights .....	275
5 Description of the System .....	278
6 Conclusions and Further Work .....	278
<b>Exploring Low Dimensional Objects in High Dimensional Spaces</b>	281
<i>Dennis Roseman</i>	
1 Introduction .....	281
2 Some Terminology for High Dimensional Viewing .....	281
3 Four Sample Problems .....	282
4 How .....	282
5 Getting from High Dimensions Down to Four Dimensions .....	286
6 Mathematics and Slicing .....	287
7 Conclusions, Future Developments .....	289

**V Vector Fields and Flow Visualization**

<b>Fast LIC with Piecewise Polynomial Filter Kernels</b>	295
<i>Hans-Christian Hege, Detlev Stalling</i>	
1 Introduction .....	295
2 Line Integral Convolution .....	296
3 Convolution Theorem, Filter Kernels .....	300
4 A General Fast LIC Algorithm .....	307
5 Statistical Analysis of LIC Images .....	309
6 Results .....	312
<b>Visualizing Poincaré Maps together with the Underlying Flow</b>	315
<i>Helwig Löffelmann, Thomas Kučera, Eduard Gröller</i>	
1 Introduction .....	315
2 About Poincaré Maps .....	316
3 Previous and Related Work .....	317
4 Visualizing Poincaré Maps .....	318
5 Embedding the Visualization of Poincaré Maps within the 3D Flow	321
6 Animation Aspects .....	324
7 Implementation Issues .....	324
8 Conclusions .....	325
9 Acknowledgements .....	326
<b>Accuracy in 3D Particle Tracing</b>	329
<i>Adriano Lopes, Ken Brodlie</i>	
1 Introduction .....	329
2 Accuracy and the Dataflow Model .....	330
3 Particle Tracing .....	331
4 Accuracy Assessment in a Runge-Kutta Method .....	332
5 Results .....	339
6 Conclusion and future work .....	340
7 Acknowledgements .....	340
<b>Clifford Algebra in Vector Field Visualization</b>	343
<i>Gerik Scheuermann, Hans Hagen, Heinz Krüger</i>	
1 Introduction .....	343
2 Clifford Algebra .....	344
3 Clifford Analysis .....	345
4 Vector Field Visualization Using Clifford Algebra .....	347
5 Results .....	350
6 Acknowledgement .....	350

Table of Contents	XIII
<b>Visualization of Complex ODE Solutions</b>	353
<i>Laurent Testard</i>	
1 Introduction .....	353
2 Extended Phase Portraits .....	356
3 Applications to CODEs .....	359
4 Conclusion .....	362
<b>Appendix: Color Plates</b>	363
