Preface	xiii
Contributors	xvii
I Foundations	1
1 Discrete Tomography: A Historical Overview	
<i>Attila Kuba, Gabor T. Herman</i>	3
1.1 Introduction	3
1.2 Foundations and algorithms	6
1.2.1 Definitions, notations, and basic problems	6
1.2.2 Reconstruction of binary matrices from two projections	10
1.3 Applications	26
1.3.1 Data compression, data coding, and image processing	26
1.3.2 Electron microscopy	27
1.3.3 Biplane angiography	27
1.3.4 Computerized tomography	28
1.4 Conclusion	29
References	29
2 Sets of Uniqueness and Additivity in Integer Lattices	
<i>Peter C. Fishburn, Lawrence A. Shepp</i>	35
2.1 Introduction	35
2.2 Uniqueness and additivity	37
2.3 Bad rectangles	43
2.4 No bad rectangles	45
2.5 Nonadditive sets of uniqueness	46
2.6 Planar sets and lines	50
2.7 Linear programming	55
2.8 Discussion	56
References	57
3 Tomographic Equivalence and Switching Operations	
<i>T. Yung Kong, Gabor T. Herman</i>	59
3.1 Ryser's theorem for binary pictures on the square grid	59

3.1.1	Binary and ternary pictures on the square grid . . .	60
3.1.2	Four statements of Ryser's theorem	61
3.1.3	Metropolis algorithms based on Ryser graphs	63
3.1.4	A proof of Ryser's theorem	68
3.2	Nonexistence of analogs on m -grids with $m > 2$	70
3.2.1	m -grids	70
3.2.2	Validity of Ryser's theorem for arbitrary 2-grids . .	71
3.2.3	The main result	72
3.3	A proof of the main result	72
3.3.1	Derivation of the main result from the Main Claim .	73
3.3.2	Justification of the Main Claim	75
3.4	Concluding remarks	82
	References	83
4	Uniqueness and Complexity in Discrete Tomography	
	<i>Richard J. Gardner, Peter Gritzmann</i>	85
4.1	Introduction	85
4.2	Definitions and preliminaries	86
4.3	Uniqueness results	88
4.4	Complexity results	97
4.5	Further extensions and variations	108
4.5.1	Higher-dimensional X-rays	108
4.5.2	Successive determination	109
4.5.3	The polyatomic case	110
	References	111
5	Reconstruction of Plane Figures from Two Projections	
	<i>Akira Kaneko, Lei Huang</i>	115
5.1	Review of the problem and known results	115
5.2	Choice of good reconstruction for the discrete case	123
5.3	Passage to continuous limit	128
	References	134
6	Reconstruction of Two-Valued Functions and Matrices	
	<i>Attila Kuba</i>	137
6.1	Introduction	137
6.2	Characteristic functions	138
6.3	Two-valued functions	139
6.4	Reconstruction of two-valued functions	143
6.5	Two-valued matrices	147
6.6	Reconstruction of two-valued matrices	153
6.7	Uniqueness in the case of two-valued matrices	157
	References	160

7	Reconstruction of Connected Sets from Two Projections	
	<i>Alberto Del Lungo, Maurice Nivat</i>	163
7.1	Introduction	163
7.2	Preliminaries	164
7.3	Intractability results	167
	7.3.1 The complexity of RSHVP on (h) , (p, h) , (v) , and (p, v)	167
	7.3.2 The complexity of RSHVP on (p) and (h, v)	169
7.4	Reconstruction of convex polyominoes	172
	7.4.1 The medians	173
	7.4.2 The spine and its reconstruction	175
	7.4.3 The reconstruction algorithm	179
	References	187
II	Algorithms	189
8	Binary Tomography Using Gibbs Priors	
	<i>Samuel Matej, Avi Vardi, Gabor T. Herman, Eilat Vardi</i>	191
8.1	Introduction	192
8.2	Gibbs distributions on the hexagonal grid	193
8.3	Reconstruction algorithms	195
8.4	Experimental study	198
8.5	Finding additional invariant elements	204
8.6	Gibbs prior definition using a look-up table	207
8.7	Conclusions	209
	References	211
9	Probabilistic Modeling of Discrete Images	
	<i>Michael T. Chan, Gabor T. Herman, Emanuel Levitan</i>	213
9.1	Introduction	213
9.2	Image-modeling distributions for discrete images	215
9.3	Parameter estimation	217
	9.3.1 Isotropic considerations	217
	9.3.2 Combining global and local characteristics	217
9.4	Recovering images corrupted by additive noise	219
9.5	Adaptation to discrete tomographic reconstruction	226
	9.5.1 The posterior model and optimization criteria	226
	9.5.2 An approximate two-step reconstruction approach	228
	9.5.3 Experimental results	229
9.6	Conclusions	232
	References	232

10 Multiscale Bayesian Methods for Discrete Tomography	
<i>Thomas Freese, Charles A. Bouman, Ken Sauer</i>	237
10.1 Introduction	237
10.2 Stochastic data models for tomography	240
10.3 Markov random field prior models	243
10.4 Optimization techniques	245
10.5 Estimation of discrete levels	247
10.6 Multiscale approaches	250
10.7 Multiscale MRF	251
10.8 Computational complexity	252
10.9 Results	254
10.10 Conclusion	260
References	261
11 An Algebraic Solution for Discrete Tomography	
<i>Andrew E. Yagle</i>	265
11.1 Introduction	265
11.1.1 Applications	265
11.1.2 Discussion	266
11.2 Problem formulation and nonuniqueness	267
11.2.1 Problem formulation	267
11.2.2 Nonuniqueness	267
11.3 Reformulation and insights using the DFT	268
11.3.1 Reformulation using the DFT	268
11.3.2 Ambiguity insights using the DFT	269
11.3.3 Relation to phase retrieval	269
11.3.4 Agarwal-Cooley fast convolution	269
11.4 Solution using DFT reformulation	270
11.4.1 Solving for $X(k_1, k_2, k_3)$	270
11.4.2 Linear systems of equations for $X(k_1, k_2, k_3)$	271
11.4.3 Solving for $x(i_1, i_2, i_3)$	271
11.5 Illustrative examples	272
11.5.1 $2 \times 2 \times 2$ general problem	272
11.5.2 $2 \times 2 \times 2$ general solution	272
11.5.3 $3 \times 3 \times 3$ example	273
11.6 Closed-form solution to limited-angle discrete tomography	274
11.6.1 Introduction	274
11.6.2 Limited-angle and discrete tomography	275
11.7 An explicit formula for bandwidth extrapolation	276
11.7.1 Basic idea	276
11.8 Application to tomography	277
11.8.1 Discussion of application	277
11.8.2 Comments	278
11.8.3 Summary of procedure	278
11.9 A simple, illustrative numerical example	279

11.9.1 Problem statement 279
 11.9.2 Extrapolation equations 280
 11.9.3 Extrapolation of unknown $F(m, n)$ 281
 11.9.4 Application to large images 282
 11.10 Conclusion 282
 References 283

12 Binary Steering of Nonbinary Iterative Algorithms

Yair Censor, Samuel Matej **285**
 12.1 Introduction: Problem definition, approach, and motivation 285
 12.2 The steering mechanism 286
 12.3 Experimental study 289
 12.4 Conclusions 294
 References 295

13 Reconstruction of Binary Images via the EM Algorithm

Yehuda Vardi, Cun-Hui Zhang **297**
 13.1 Introduction 297
 13.2 The EM/ML algorithm 301
 13.3 Properties of the algorithm 303
 13.4 Implementations and experiments 304
 13.5 Further comments 309
 13.6 Proofs 310
 13.6.1 Characterization of local MLEs 310
 13.6.2 Convergence of the algorithm 312
 13.7 Appendix 313
 References 315

14 Compact Object Reconstruction

Ali Mohammad-Djafari, Charles Soussen **317**
 14.1 Introduction 317
 14.2 Review of methods 318
 14.2.1 Classical pixel representation approach 319
 14.2.2 Level-set approach 320
 14.2.3 Shape reconstruction approach 321
 14.3 Polygonal and polyhedral shape modeling 322
 14.3.1 Exact reconstruction of polygonal shapes in 2D . . . 323
 14.3.2 Exact reconstruction of polyhedral shapes in 3D . . 325
 14.4 Description of the proposed method 330
 14.5 Simulation results 332
 14.5.1 2D reconstructions 332
 14.5.2 3D case 334
 14.6 Conclusions 339
 References 339

III Applications 343

15 CT-Assisted Engineering and Manufacturing 345

Jolyon A. Browne, Mathew Koshy **345**

15.1 Introduction 345

15.2 Agile manufacturing: A new manufacturing paradigm . . . 347

15.3 Obtaining the digital model 349

15.4 The role of computed tomography: Selected examples . . . 351

15.5 The role of discrete tomography in improving the digital model 358

15.6 Technical challenges 359

15.7 Conclusions 360

References 360

16 3D Reconstruction from Sparse Radiographic Data 363

James Sachs, Jr., Ken Sauer **363**

16.1 Introduction 363

16.2 Radiographic/tomographic data 365

 16.2.1 Idealized photon counting model 365

 16.2.2 Compton scattering effects 366

16.3 3D maximum a posteriori reconstruction 369

 16.3.1 Bayesian formulation 369

 16.3.2 Reconstruction from simulated radiographs 372

 16.3.3 Optimization considerations 374

16.4 Physical radiographic experiments 376

16.5 Conclusion 381

References 382

17 Heart Chamber Reconstruction from Biplane Angiography 385

Dietrich G.W. Onnasch, Guido P.M. Prause **385**

17.1 Introduction 385

17.2 Cardiac X-ray angiography 386

 17.2.1 Image recording and processing 386

 17.2.2 Quantitative biplane angiography 387

17.3 Binary tomography 389

 17.3.1 The problem 389

 17.3.2 Probability-driven reconstruction 390

17.4 Input data restoration 392

17.5 Implemented algorithm 394

 17.5.1 Pre-processing 394

 17.5.2 Ventricular reconstruction 395

 17.5.3 Post-processing 396

17.6 Results 397

 17.6.1 Patient data 397

17.6.2	Ventricular phantoms	399
17.7	Discussion	399
	References	401
18	Discrete Tomography in Electron Microscopy	
	<i>J. M. Carazo, C. O. Sorzano, E. Rietzel, R. Schröder,</i>	
	<i>R. Marabini</i>	405
18.1	Introduction	406
18.2	3D electron microscopy	407
18.3	Discrete tomography in electron microscopy	410
18.4	Considering experimental applications: The problems	410
18.4.1	The Contrast Transfer Function (CTF)	411
18.4.2	Discretization of the electron density of specimens	412
18.5	A practical application	413
18.6	Conclusions	414
	References	414
19	Tomography on the 3D-Torus and Crystals	
	<i>Pablo M. Salzberg, Raul Figueroa</i>	417
19.1	Introduction	417
19.2	A fast inverse transform	418
19.3	The continuous case	422
19.4	Binary tomography on lattices	425
19.4.1	Binary tomography and crystals	425
19.4.2	Stating the binary tomography problem	426
19.5	The reconstruction algorithm	428
19.6	Final remarks and examples	429
	References	432
20	A Recursive Algorithm for Diffuse Planar Tomography	
	<i>Sarah K. Patch</i>	435
20.1	Introduction	435
20.2	Diffuse tomography model	437
20.2.1	Forward problem	440
20.2.2	Consistency conditions	440
20.3	Recursive solution	441
20.4	Elimination of parameters	443
20.5	Conclusion	447
20.6	Appendix I — Matrix identities	448
20.6.1	Elementary identities	448
20.6.2	Graßmann identities	449
20.6.3	Range conditions	449
20.7	Appendix II — Enforcing range conditions	450
	References	453

21 From Orthogonal Projections to Symbolic Projections	
<i>Shi-Kuo Chang</i>	455
21.1 Introduction	455
21.2 2D string representations of symbolic pictures	457
21.3 Picture matching	459
21.4 Computer-aided design database	461
21.5 Geographical information systems	464
21.6 Retrieval of similar Chinese characters	467
21.7 Three-dimensional image database querying	468
21.8 Medical image database system	469
