<i>Preface</i>	<i>page</i> ix
1 Overview of Modular Forms	1
1.1 Hecke Characters	7
1.1.1 Hecke characters of finite order	7
1.1.2 Arithmetic Hecke characters	9
1.1.3 A theorem of Weil	11
1.2 Introduction to Modular Forms	14
1.2.1 Modular forms	14
1.2.2 Abelian modular forms and abelian deformation	19
2 Representations of a Group	23
2.1 Group Representations	23
2.1.1 Coefficient rings	23
2.1.2 Topological and profinite groups	24
2.1.3 Nakayama's lemma	29
2.1.4 Semi-simple algebras	31
2.1.5 Representations of finite groups	34
2.1.6 Induced representations	39
2.1.7 Representations with coefficients in Artinian rings	42
2.2 Pseudo-representations	45
2.2.1 Pseudo-representations of degree 2	45
2.2.2 Higher degree pseudo-representations	48
2.3 Deformation of Group Representations	51
2.3.1 Abelian deformation	52
2.3.2 Non-abelian deformation	56
2.3.3 Tangent spaces of local rings	59
2.3.4 Cohomological interpretation of tangent spaces	60

3 Representations of Galois Groups and Modular Forms	63
3.1 Modular Forms on Adele Groups of $GL(2)$	63
3.1.1 Elliptic modular forms	63
3.1.2 Structure theorems on $GL(\mathbb{A})$	65
3.1.3 Maximal compact subgroups	69
3.1.4 Open compact subgroups of $GL_2(\mathbb{A})$ and Dirichlet characters	71
3.1.5 Adelic and classical modular forms	74
3.1.6 Hecke algebras	77
3.1.7 Fourier expansion	84
3.1.8 Rationality of modular forms	88
3.1.9 p -adic Hecke algebras	96
3.2 Modular Galois Representations	101
3.2.1 Hecke eigenforms	101
3.2.2 Galois representation of Hecke eigenforms	107
3.2.3 Galois representation with values in the Hecke algebra	112
3.2.4 Universal deformation rings	117
3.2.5 Local deformation ring	121
3.2.6 Taylor–Wiles systems	125
3.2.7 Taylor–Wiles system of Hecke algebras	135
3.2.8 Tangential dimensions of deformation rings	139
4 Cohomology Theory of Galois Groups	154
4.1 Categories and Functors	154
4.1.1 Categories	154
4.1.2 Functors	155
4.1.3 Representability	156
4.1.4 Abelian categories	159
4.2 Extension of Modules	162
4.2.1 Extension groups	162
4.2.2 Extension functors	166
4.2.3 Cohomology groups of complexes	170
4.2.4 Higher extension groups	173
4.3 Group Cohomology Theory	179
4.3.1 Cohomology of finite groups	180
4.3.2 Tate cohomology groups	185
4.3.3 Continuous cohomology for profinite groups	189
4.3.4 Inflation and restriction sequences	197
4.3.5 Applications to representation theory	202
4.4 Duality in Galois Cohomology	206

<i>Contents</i>	vii
4.4.1 Class formation and duality of cohomology groups	206
4.4.2 Global duality theorems	214
4.4.3 Tate–Shafarevich groups	219
4.4.4 Local Euler characteristic formula	227
4.4.5 Global Euler characteristic formula	231
5 Modular L-Values and Selmer Groups	236
5.1 Selmer Groups	239
5.1.1 Definition	239
5.1.2 Motivic interpretation	244
5.1.3 Character twists	252
5.2 Adjoint Selmer Groups	254
5.2.1 Adjoint Galois representations	254
5.2.2 Universal deformation rings	259
5.2.3 Kähler differentials	262
5.2.4 Adjoint Selmer groups and differentials	265
5.3 Arithmetic of Modular Adjoint L -Values	267
5.3.1 Analyticity of adjoint L -functions	267
5.3.2 Rationality of adjoint L -values	269
5.3.3 Congruences and adjoint L -values	276
5.3.4 Gorenstein and complete intersection rings	285
5.3.5 Universal p -ordinary Hecke algebras	291
5.3.6 p -adic adjoint L -functions	294
5.4 Control of Universal Deformation Rings	297
5.4.1 Deformation functors of group representations	297
5.4.2 Nearly ordinary deformations	302
5.4.3 Ordinary deformations	305
5.4.4 Deformations with fixed determinant	306
5.5 Base Change of Deformation Rings	307
5.5.1 Various deformation rings	307
5.6 Hilbert Modular Hecke Algebras	310
5.6.1 Various Hecke algebras for $GL(2)$	310
5.6.2 Automorphic base change	316
5.6.3 An Iwasawa theory for Hecke algebras	318
5.6.4 Adjoint Selmer groups over cyclotomic extensions	323
5.6.5 Proof of Theorem 5.44	325
<i>Bibliography</i>	330
<i>Subject Index</i>	337
<i>List of Statements</i>	340
<i>List of Symbols</i>	342
