

**Algebra in the Stone-Čech
Compactification
Theory and Applications**

by

Neil Hindman
Dona Strauss

Walter de Gruyter · Berlin · New York 1998

Contents

I. Background Development	1
Notation	2
1 Semigroups and Their Ideals	3
1.1 Semigroups	3
1.2 Idempotents and Subgroups	8
1.3 Powers of a Single Element	11
1.4 Ideals	12
1.5 Idempotents and Order	15
1.6 Minimal Left Ideals	19
1.7 Minimal Left Ideals with Idempotents	23
Notes	30
2 Right Topological Semigroups	31
2.1 Topological Hierarchy	31
2.2 Compact Right Topological Semigroups	33
2.3 Closures and Products of Ideals	38
2.4 Semitopological Semigroups	41
2.5 Ellis' Theorem	43
Notes	47
3 βD	48
3.1 Ultrafilters	48
3.2 The Topological Space βD	53
3.3 Stone–Čech Compactification	55
3.4 More Topology of βD	58
3.5 Uniform Limits via Ultrafilters	62
3.6 The Cardinality of βD	66
Notes	69
Closing Remarks	70
4 βS	72
4.1 Extending the Operation to βS	72
4.2 Commutativity in βS	80

4.3	S^*	82
4.4	$K(\beta S)$ and Its Closure	85
	Notes	88
5	βS and Ramsey Theory	90
5.1	Ramsey Theory	90
5.2	Idempotents and Finite Products	92
5.3	Sums and Products in \mathbb{N}	96
5.4	Adjacent Finite Unions	97
5.5	Compactness	101
	Notes	102
II.	Algebra of βS	105
6	Ideals and Commutativity in βS	107
6.1	The Semigroup \mathbb{H}	107
6.2	Intersecting Left Ideals	112
6.3	Numbers of Idempotents and Ideals	114
6.4	Weakly Left Cancellative Semigroups	122
6.5	Semiprincipal Left Ideals	125
6.6	Principal Ideals in $\beta \mathbb{Z}$	131
6.7	Ideals and Density	133
	Notes	135
7	Groups in βS	136
7.1	Zelenuk's Theorem	136
7.2	Semigroups Isomorphic to \mathbb{H}	148
7.3	Free Semigroups and Free Groups in βS	153
	Notes	157
8	Cancellation	158
8.1	Cancellation Involving Elements of S	158
8.2	Right Cancelable Elements in βS	161
8.3	Right Cancellation in $\beta \mathbb{N}$ and $\beta \mathbb{Z}$	170
8.4	Left Cancelable Elements in βS	174
8.5	Compact Semigroups	178
	Notes	185
9	Idempotents	186
9.1	Right Maximal Idempotents	186
9.2	Topologies Defined by Idempotents	194
9.3	Chains of Idempotents	199
9.4	Identities in βS	202
	Notes	204

10 Homomorphisms	205
10.1 Homomorphisms to the Circle Group	206
10.2 Homomorphisms from βT into S^*	210
10.3 Homomorphisms from T^* into S^*	214
10.4 Isomorphisms on Principal Ideals	218
Notes	221
11 The Rudin–Keisler Order	222
11.1 Connections with Right Cancelability	223
11.2 Connections with Left Cancelability in \mathbb{N}^*	229
11.3 Further Connections with the Algebra of βS	231
11.4 The Rudin–Frolík Order	232
Notes	234
12 Ultrafilters Generated by Finite Sums	236
12.1 Martin’s Axiom	236
12.2 Strongly Summable Ultrafilters — Existence	240
12.3 Strongly Summable Ultrafilters — Independence	245
12.4 Algebraic Properties	248
Notes	256
13 Multiple Structures in βS	258
13.1 Sums Equal to Products in $\beta \mathbb{Z}$	258
13.2 The Distributive Laws in $\beta \mathbb{Z}$	264
13.3 Ultrafilters on \mathbb{R} Near 0	268
13.4 Left and Right Continuous Extensions	272
Notes	275
III. Combinatorial Applications	277
14 The Central Sets Theorem	279
14.1 Van der Waerden’s Theorem	279
14.2 The Hales–Jewett Theorem	281
14.3 The Commutative Central Sets Theorem	283
14.4 The Noncommutative Central Sets Theorem	286
14.5 Combinatorial Characterization	288
Notes	294
15 Partition Regularity of Matrices	296
15.1 Image Partition Regular Matrices	296
15.2 Kernel Partition Regular Matrices	301
15.3 Kernel Partition Regularity Over \mathbb{N}	304
15.4 Image Partition Regularity Over \mathbb{N}	308
15.5 Matrices with Entries from Fields	315
Notes	318

16	IP, IP*, Central, and Central* Sets	320
16.1	Sets in Arbitrary Semigroups	320
16.2	IP* and Central Sets in \mathbb{N}	324
16.3	IP* Sets in Weak Rings	332
16.4	Spectra and Iterated Spectra	336
	Notes	338
17	Sums and Products	339
17.1	Ultrafilters with Rich Structure	339
17.2	Pairwise Sums and Products	341
17.3	Sums of Products	346
17.4	Linear Combinations of Sums	354
17.5	Sums and Products in $(0, 1)$	361
	Notes	367
18	Multidimensional Ramsey Theory	369
18.1	Ramsey's Theorem and Generalizations	369
18.2	IP* Sets in Product Spaces	376
18.3	Spaces of Variable Words	381
18.4	Carlson's Theorem	386
	Notes	393
IV.	Connections With Other Structures	395
19	Relations With Topological Dynamics	397
19.1	Minimal Dynamical Systems	397
19.2	Enveloping Semigroups	400
19.3	Dynamically Central Sets	404
19.4	Dynamically Generated IP* Sets	407
	Notes	411
20	Density — Connections with Ergodic Theory	412
20.1	Upper Density and Banach Density	412
20.2	The Correspondence Principle	417
20.3	A Density Version of the Finite Sums Theorem	419
	Notes	424
21	Other Semigroup Compactifications	425
21.1	The \mathcal{LMC} , \mathcal{WAP} , \mathcal{AP} , and \mathcal{SAP} Compactifications	425
21.2	Right Topological Compactifications	429
21.3	Periodic Compactifications as Quotients	432
21.4	Spaces of Filters	441
21.5	Uniform Compactifications	445
	Notes	453
