# Contents of Volume I: Theory

Preface .....	xiii
Chapter 1. Continuity of Multifunctions	
Introduction.....	1
1. Hyperspace topologies.....	4
2. Continuity concepts and their relations.....	35
3. Value functions.....	82
4. Continuous selections.....	89
5. Directionally continuous selections.....	113
6. Approximations and parametrizations of multifunctions .....	119
7. Remarks .....	130
Chapter 2. Measurable Multifunctions	
Introduction.....	138
1. Definitions and properties of measurable multifunctions.....	141
2. Measurable selections.....	154
3. Decomposable sets and sets of $L^p$ -selectors.....	174
4. Extreme points of multifunctions.....	189
5. Integral of a multifunction.....	198
6. Conditional expectation of a multifunction .....	217
7. Caratheodory multifunctions .....	226
8. Selections of multifunctions with decomposable values.....	238
9. Normal integrands and integral functionals.....	263
10. Remarks .....	286

## Chapter 3. Monotone and Accretive Operators

Introduction.....	298
1. Monotone and maximal monotone operators.....	302
2. Surjectivity results.....	313
3. Perturbation results.....	331
4. Subdifferential operators.....	341
5. Measurability of maximal monotone operators.....	359
6. Operators of monotone type.....	364
7. Accretive operators.....	377
8. Nonlinear semigroups.....	398
9. Examples and applications.....	416
10. Remarks.....	437

## Chapter 4. Degree Theory for Multifunctions

Introduction.....	448
1. Leray-Schauder degree and generalizations.....	450
2. Degree for $\gamma$ -condensing multifunctions.....	458
3. Degree for mappings of the form $A + f + G$ .....	467
4. Degree for mappings of the form $f + N_G$ .....	474
5. Degree for $\gamma$ -condensing composite multifunctions.....	484
6. Degree for semicondensing vector fields.....	496
7. Coincidence degree and fixed point index.....	501
8. Remarks.....	511

## Chapter 5. Fixed Points

Introduction.....	517
1. Metric fixed point theorems.....	519
2. Topological fixed points and minimax problems.....	532
3. Asymptotic fixed point theorems.....	545
4. Monotonicity conditions and fixed points.....	551
5. Structure and stability of fixed point sets.....	560
6. Random fixed point theorems.....	569
7. Remarks.....	574

## Chapter 6. Concave Multifunctions and Tangent Cones

Introduction.....	583
1. Concave multifunctions.....	585
2. Spectral properties of concave multifunctions.....	599
3. Superlinear multifunctions.....	606
4. Sublinear multifunctions.....	611
5. Tangent and normal cones.....	623

6. Differentiability of multifunctions .....	642
7. Remarks .....	653

## Chapter 7. Convergence of Multifunctions

Introduction .....	658
1. Definitions and properties of modes of convergence .....	660
2. Compactness and completeness results .....	684
3. Fatou's type lemmata for multifunctions .....	691
4. Convergence of selectors and set-valued integrals .....	711
5. Epigraphical and Mosco convergences of functions .....	736
6. G-convergence of operators .....	761
7. Examples and applications .....	778
8. Remarks .....	795

## Chapter 8. Set-Valued Random Processes and Multimeasures

Introduction .....	802
1. Multivalued semimartingales .....	803
2. Multivalued uniform amarts and amarts .....	818
3. Strong laws of large numbers .....	837
4. Multimeasures and their selections .....	850
5. Nonatomicity and the range of multimeasures .....	864
6. Set-valued Radon-Nikodym derivatives .....	869
7. Transition multimeasures .....	877
8. Remarks .....	886

Appendix .....	891
----------------	-----

A.1 Topology .....	891
A.2 Measure theory .....	901
A.3 Functional analysis .....	909

References .....	923
------------------	-----

Symbols .....	957
---------------	-----

Index .....	960
