

LECTURES ON STOCHASTIC PROGRAMMING

Modeling and Theory

SECOND EDITION

Alexander Shapiro

Georgia Institute of Technology
Atlanta, Georgia

Darinka Dentcheva

Stevens Institute of Technology
Hoboken, New Jersey

Andrzej Ruszczyński

Rutgers University
New Brunswick, New Jersey

Society for Industrial and Applied Mathematics
Philadelphia

Mathematical
Optimization Society

Mathematical Optimization Society
Philadelphia

Contents

List of Notations	xi
Preface to the Second Edition	xiii
Preface to the First Edition	xv
1 Stochastic Programming Models	1
1.1 Introduction	1
1.2 Inventory	1
1.2.1 The News Vendor Problem	1
1.2.2 Chance Constraints	5
1.2.3 Multistage Models	6
1.3 Multiproduct Assembly	8
1.3.1 Two-Stage Model	8
1.3.2 Chance Constrained Model	10
1.3.3 Multistage Model	11
1.4 Portfolio Selection	12
1.4.1 Static Model	12
1.4.2 Multistage Portfolio Selection	16
1.4.3 Decision Rules	19
1.5 Supply Chain Network Design	21
Exercises	23
2 Two-Stage Problems	25
2.1 Linear Two-Stage Problems	25
2.1.1 Basic Properties	25
2.1.2 The Expected Recourse Cost for Discrete Distributions . .	27
2.1.3 The Expected Recourse Cost for General Distributions . .	30
2.1.4 Optimality Conditions	35
2.2 Polyhedral Two-Stage Problems	39
2.2.1 General Properties	39
2.2.2 Expected Recourse Cost	41
2.2.3 Optimality Conditions	43
2.3 General Two-Stage Problems	44
2.3.1 Problem Formulation, Interchangeability	44
2.3.2 Convex Two-Stage Problems	46
2.4 Nonanticipativity	48
2.4.1 Scenario Formulation	48
2.4.2 Dualization of Nonanticipativity Constraints	50

2.4.3	Nonanticipativity Duality for General Distributions	52
2.4.4	Value of Perfect Information	55
Exercises		56
3	Multistage Problems	59
3.1	Problem Formulation	59
3.1.1	The General Setting	59
3.1.2	The Linear Case	63
3.1.3	Scenario Trees	67
3.1.4	Filtration Interpretation	69
3.1.5	Algebraic Formulation of Nonanticipativity Constraints .	71
3.1.6	Piecewise Affine Policies	75
3.2	Duality	78
3.2.1	Convex Multistage Problems	78
3.2.2	Optimality Conditions	78
3.2.3	Dualization of Feasibility Constraints	82
3.2.4	Dualization of Nonanticipativity Constraints	83
Exercises		85
4	Optimization Models with Probabilistic Constraints	89
4.1	Introduction	89
4.2	Convexity in Probabilistic Optimization	95
4.2.1	Generalized Concavity of Functions and Measures	95
4.2.2	Convexity of Probabilistically Constrained Sets	107
4.2.3	Connectedness of Probabilistically Constrained Sets	114
4.3	Separable Probabilistic Constraints	115
4.3.1	Continuity and Differentiability Properties of Distribution Functions	115
4.3.2	p -Efficient Points	117
4.3.3	The Tangent and Normal Cones of $\text{conv}\mathcal{X}_p$	124
4.3.4	Optimality Conditions and Duality Theory	127
4.4	Optimization Problems with Nonseparable Probabilistic Constraints	142
4.4.1	Differentiability of Probability Functions and Optimality Conditions	143
4.4.2	Approximations of Nonseparable Probabilistic Constraints	145
4.5	Semi-Infinite Probabilistic Problems	153
Exercises		159
5	Statistical Inference	163
5.1	Statistical Properties of Sample Average Approximation Estimators .	163
5.1.1	Consistency of SAA Estimators	165
5.1.2	Asymptotics of the SAA Optimal Value	170
5.1.3	Second Order Asymptotics	173
5.1.4	Minimax Stochastic Programs	177
5.2	Stochastic Generalized Equations	181
5.2.1	Consistency of Solutions of the SAA Generalized Equations	183
5.2.2	Asymptotics of SAA Generalized Equations Estimators . .	184

5.3	Monte Carlo Sampling Methods	187
5.3.1	Exponential Rates of Convergence and Sample Size Estimates in Case of a Finite Feasible Set	188
5.3.2	Sample Size Estimates in the General Case	192
5.3.3	Finite Exponential Convergence	198
5.4	Quasi-Monte Carlo Methods	199
5.5	Variance Reduction Techniques	205
5.5.1	Latin Hypercube Sampling	205
5.5.2	Linear Control Random Variables Method	206
5.5.3	Importance Sampling and Likelihood Ratio Methods	207
5.6	Validation Analysis	208
5.6.1	Estimation of the Optimality Gap	209
5.6.2	Statistical Testing of Optimality Conditions	213
5.7	Chance Constrained Problems	216
5.7.1	Monte Carlo Sampling Approach	216
5.7.2	Validation of an Optimal Solution	222
5.8	SAA Method Applied to Multistage Stochastic Programming	226
5.8.1	Statistical Properties of Multistage SAA Estimators	226
5.8.2	Complexity Estimates of Multistage Programs	231
5.9	Stochastic Approximation Method	234
5.9.1	Classical Approach	235
5.9.2	Robust SA Approach	238
5.9.3	Mirror Descent SA Method	240
5.9.4	Accuracy Certificates for Mirror Descent SA Solutions . .	248
5.10	Stochastic Dual Dynamic Programming Method	252
5.10.1	Approximate Dynamic Programming Approach	253
5.10.2	The Stochastic Dual Dynamic Programming Algorithm . .	256
5.10.3	Convergence Properties of the SDDP Algorithm	259
5.10.4	Risk Averse SDDP Method	260
	Exercises	266
6	Risk Averse Optimization	271
6.1	Introduction	271
6.2	Mean-Risk Models	272
6.2.1	Main Ideas of Mean-Risk Analysis	272
6.2.2	Semideviations	273
6.2.3	Weighted Mean Deviations from Quantiles	274
6.2.4	Average Value-at-Risk	275
6.3	Coherent Risk Measures	279
6.3.1	Differentiability Properties of Risk Measures	284
6.3.2	Examples of Risk Measures	289
6.3.3	Law Invariant Risk Measures	298
6.3.4	Spectral Risk Measures	302
6.3.5	Kusuoka Representations	306
6.3.6	Probability Spaces with Atoms	313
6.3.7	Stochastic Orders	316
6.4	Ambiguous Chance Constraints	318
6.5	Optimization of Risk Measures	325
6.5.1	Dualization of Nonanticipativity Constraints	328
6.5.2	Interchangeability Principle for Risk Measures	329

6.5.3	Examples	331
6.6	Statistical Properties of Risk Measures	336
6.6.1	Average Value-at-Risk	336
6.6.2	Absolute Semideviation Risk Measure	341
6.6.3	Von Mises Statistical Functionals	343
6.7	The Problem of Moments	346
6.8	Multistage Risk Averse Optimization	351
6.8.1	Scenario Tree Formulation	351
6.8.2	Conditional Risk Mappings	357
6.8.3	Dynamic Risk Measures	362
6.8.4	Risk Averse Multistage Stochastic Programming	366
6.8.5	Time Consistency of Multiperiod Problems	369
6.8.6	Minimax Approach to Risk Averse Multistage Programming	375
6.8.7	Portfolio Selection and Inventory Model Examples	378
	Exercises	381
7	Background Material	387
7.1	Optimization and Convex Analysis	388
7.1.1	Directional Differentiability	388
7.1.2	Elements of Convex Analysis	390
7.1.3	Optimization and Duality	393
7.1.4	Optimality Conditions	400
7.1.5	Perturbation Analysis	405
7.1.6	Epiconvergence	412
7.2	Probability	413
7.2.1	Probability Spaces and Random Variables	413
7.2.2	Conditional Probability and Conditional Expectation	418
7.2.3	Measurable Multifunctions and Random Functions	419
7.2.4	Expectation Functions	422
7.2.5	Uniform Laws of Large Numbers	428
7.2.6	Law of Large Numbers for Risk Measures	432
7.2.7	Law of Large Numbers for Random Sets and Subdifferentials	437
7.2.8	Delta Method	440
7.2.9	Exponential Bounds of the Large Deviations Theory	445
7.2.10	Uniform Exponential Bounds	450
7.3	Elements of Functional Analysis	456
7.3.1	Conjugate Duality and Differentiability	460
7.3.2	Paired Locally Convex Topological Vector Spaces	462
7.3.3	Lattice Structure	463
7.3.4	Interchangeability Principle	464
	Exercises	465
8	Bibliographical Remarks	467
	Bibliography	475
	Index	491
