INTRODUCTION TO MODERN STATISTICAL MECHANICS

David Chandler
University of California, Berkeley

New York Oxford
OXFORD UNIVERSITY PRESS

Contents

Chapter 1. Thermodynamics, Fundamentals 3
1.1. First Law of Thermodynamics and Equilibrium 4
1.2. Second Law 8
1.3. Variational Statement of Second Law 11
1.4. Application: Thermal Equilibrium and Temperature 13
1.5. Auxiliary Functions and Legendre Transforms 16
1.6. Maxwell Relations 20
1.7. Extensive Functions and the Gibbs–Duhem Equation 22
1.8. Intensive Functions 24
Additional Exercises 25
Bibliography 27

Chapter 2. Conditions for Equilibrium and Stability 28
2.1. Multiphase Equilibrium 29
2.2. Stability 33
2.3. Application to Phase Equilibria 37
2.4. Plane Interfaces 44
Additional Exercises 49
Bibliography 52

Chapter 3. Statistical Mechanics 54
3.1. The Statistical Method and Ensembles 55
3.2. Microcanonical Ensemble and the Rational Foundation of Thermodynamics 59
3.3. Canonical Ensemble 62

3.4. A Simple Example 66
3.5. Generalized Ensembles and the Gibbs Entropy Formula 69
3.6. Fluctuations Involving Uncorrelated Particles 72
3.7. Alternative Development of Equilibrium Distribution Functions 74
Additional Exercises 79
Bibliography 84

Chapter 4. Non-Interacting (Ideal) Systems 86
4.1. Occupation Numbers 89
4.2. Photon Gas 90
4.3. Phonon Gas or Fluctuations of Atomic Positions in a Cold Solid 92
4.4. Ideal Gases of Real Particles 94
4.5. Electrons in Metals 97
4.6. Classical Ideal Gases, the Classical Limit 100
4.7. Thermodynamics of an Ideal Gas of Structureless Classical Particles 103
4.8. A Dilute Gas of Atoms 105
4.9. Dilute Gas of Diatomic Molecules 106
4.10. Chemical Equilibria in Gases 111
Additional Exercises 113
Bibliography 118

Chapter 5. Statistical Mechanical Theory of Phase Transitions 119
5.1. Ising Model 119
5.2. Lattice Gas 124
5.3. Broken Symmetry and Range of Correlations 125
5.4. Mean Field Theory 131
5.5. Variational Treatment of Mean Field Theory 135
5.6. Renormalization Group (RG) Theory 139
5.7. RG Theory for the Two-Dimensional Ising Model 143
5.8. Isomorphism between Two-Level Quantum Mechanical System and the Ising Model 149
Additional Exercises 154
Bibliography 158

Chapter 6. Monte Carlo Method in Statistical Mechanics 159
6.1. Trajectories 160
6.2. A Monte Carlo Trajectory 163
6.3. Non-Boltzmann Sampling 168

6.4. Quantum Monte Carlo 175
Additional Exercises 178
Bibliography 182
Appendix 184

Chapter 7. Classical Fluids **188**
7.1. Averages in Phase Space 189
7.2. Reduced Configurational Distribution Functions 195
7.3. Reversible Work Theorem 201
7.4. Thermodynamic Properties from $g(r)$ 202
7.5. Measurement of $g(r)$ by Diffraction 207
7.6. Solvation and Chemical Equilibrium in Liquids 209
7.7. Molecular Liquids 213
7.8. Monte Carlo for Hard Disks 218
Additional Exercises 223
Bibliography 228
Appendix 230

Chapter 8. Statistical Mechanics of Non-Equilibrium Systems **234**
8.1. Systems Close to Equilibrium 235
8.2. Onsager's Regression Hypothesis and Time Correlation Functions 237
8.3. Application: Chemical Kinetics 242
8.4. Another Application: Self-Diffusion 246
8.5. Fluctuation-Dissipation Theorem 252
8.6. Response Functions 255
8.7. Absorption 258
8.8. Friction and the Langevin Equation 261
Additional Exercises 266
Bibliography 270

Index **271**
