

Introduction to **PERCOLATION THEORY**

Revised Second Edition

DIETRICH STAUFFER

Professor of Theoretical Physics
University of Cologne, France

AMNON AHARONY

Director, Sackler Institute of Solid State Physics
Tel Aviv University, Israel

CRC PRESS

Boca Raton London New York Washington, D.C.

Contents

Preface to the Second Edition	viii
Preface to the First Edition	ix
1 Introduction: Forest Fires, Fractal Oil Fields, and Diffusion	1
1.1 What is percolation?	1
1.2 Forest fires	4
1.3 Oil fields and fractals	8
1.4 Diffusion in disordered media	10
1.5 Coming attractions	12
Further reading	13
2 Cluster Numbers	15
2.1 The truth about percolation	15
2.2 Exact solution in one dimension	19
2.3 Small clusters and animals in d dimensions	23
2.4 Exact solution for the Bethe lattice	26
2.5 Towards a scaling solution for cluster numbers	35
2.6 Scaling assumptions for cluster numbers	42
2.7 Numerical tests	45
2.8 Cluster numbers away from p_c	56
Further reading	59
3 Cluster Structure	60
3.1 Is the cluster perimeter a real perimeter?	60
3.2 Cluster radius and fractal dimension	62
3.3 Another view on scaling	67
3.4 The infinite cluster at the threshold	68
Further reading	73
4 Finite-size Scaling and the Renormalization Group	74
4.1 Finite-size scaling	74
4.2 Small cell renormalization	79
4.3 Scaling revisited	86
4.4 Large cell and Monte Carlo renormalization	88

4.5 Connection to geometry	91
Further reading	92
5 Conductivity and Related Properties	93
5.1 Conductivity of random resistor networks	93
5.2 Internal structure of the infinite cluster	98
5.3 Multitude of fractal dimensions on the incipient infinite cluster	100
5.4 Multifractals	104
5.5 Fractal models	109
5.6 Renormalization group for internal cluster structure	113
5.7 Continuum percolation, Swiss-cheese models and broad distributions	114
5.8 Elastic networks	118
Further reading	120
6 Walks, Dynamics and Quantum Effects	122
6.1 Ants in the labyrinth	122
6.2 Probability distributions	130
6.3 Fractons and superlocalization	132
6.4 Hulls and external accessible perimeters	135
6.5 Diffusion fronts	140
6.6 Invasion percolation	143
Further reading	145
7 Application to Thermal Phase Transitions	147
7.1 Statistical physics and the Ising model	147
7.2 Dilute magnets at low temperatures	149
7.3 History of droplet descriptions for fluids	150
7.4 Droplet definition for the Ising model in zero field	152
7.5 The trouble with Kertész	153
7.6 Applications	154
7.7 Dilute magnets at finite temperatures	155
7.8 Spin glasses	158
Further reading	159
8 Summary	160
A Numerical Techniques	163
A.1 Analysis of exact data	163
A.2 Analysis of Monte Carlo data	164

A.3 Computerized cluster counting	166
Further reading	178
B Dimension-Dependent Approximations	179
B.1 Upper critical dimension	179
B.2 Flory approximation	180
B.3 ϵ -Expansion	181
Further reading	182
Exercises	183
Index	190
