Contents

Preface

v

PART 1

STORAGE ALLOCATION IN PROGRAM SCHEMAS

CHAPTER 1

Descriptive Analysis of the Problem 3

1.1. Brief Review of Computer Programming 3

1.2. Some Facts About Linear Programs 8

1.3. Some Facts About the General Form of a Program 22

1.4. Summary 36

CHAPTER 2

Statement of the Problem and General Theory 45

2.1. Brief Review of Mathematical Foundations 45

2.2. Initial Definitions 54

2.3. General Theory 74

CHAPTER 3

Algorithmization 81

3.1. Data Flow Graph 81

3.2. Incompatibility Graph 87

3.3. Coloring the Vertices of a Graph. General Remarks 99

3.4. Coloring the Vertices of a Graph. The Search for an Algorithm 116

CHAPTER 4

Implementation 132

4.1. Introduction 132

4.2. Structured Programming 134

4.3. General Organization of the Storage Packing Process 139

4.4. Canonical Storage allocation 142

4.5. Creating the Incompatibility Graph 148

4.6. Coloring the Vertices of a Graph 156

CHAPTER 5	156
Concluding Analysis	
5.1. The Relationship Between Theory and Practice	156
5.2. Historical Survey	167

PART II TRANSFORMATIONS OF YANOV SCHEMAS

CHAPTER 6	179
Brief Review of Mathematical Logic	
6.1. Logical Formulas and Boolean Functions	179
6.2. Algebraic Logic	189
6.3. Propositional Calculus	199
CHAPTER 7	215
Yanov Schemas	
7.1. Initial Observations	215
7.2. Search for Basic Definitions	227
7.3. Equivalence of Yanov Schemas	233
CHAPTER 8	241
Calculus of Equivalence Transformations	
8.1. Construction of Calculus	241
8.2. Well-Formedness of the Calculus	251
8.3. Canonical Schemas and Technical Theorems	256
8.4. Completeness of Calculus	262
8.5. A Final Historical Survey	267
Bibliography	275
Index	277
