Tom M. Apostol

# Modular Functions and Dirichlet Series in Number Theory

Second Edition

With 25 Illustrations

Springer-Verlag
New York Berlin Heidelberg
London Paris Tokyo Hong Kong

# Contents

Chapter 1
*Elliptic functions*

| | | |
|---|---|---|
| 1.1 | Introduction | 1 |
| 1.2 | Doubly periodic functions | 1 |
| 1.3 | Fundamental pairs of periods | 2 |
| 1.4 | Elliptic functions | 4 |
| 1.5 | Construction of elliptic functions | 6 |
| 1.6 | The Weierstrass $\wp$ function | 9 |
| 1.7 | The Laurent expansion of $\wp$ near the origin | 11 |
| 1.8 | Differential equation satisfied by $\wp$ | 11 |
| 1.9 | The Eisenstein series and the invariants $g_2$ and $g_3$ | 12 |
| 1.10 | The numbers $e_1, e_2, e_3$ | 13 |
| 1.11 | The discriminant $\Delta$ | 14 |
| 1.12 | Klein's modular function $J(\tau)$ | 15 |
| 1.13 | Invariance of $J$ under unimodular transformations | 16 |
| 1.14 | The Fourier expansions of $g_2(\tau)$ and $g_3(\tau)$ | 18 |
| 1.15 | The Fourier expansions of $\Delta(\tau)$ and $J(\tau)$ | 20 |
| | *Exercises for Chapter 1* | 23 |

Chapter 2
*The Modular group and modular functions*

| | | |
|---|---|---|
| 2.1 | Möbius transformations | 26 |
| 2.2 | The modular group $\Gamma$ | 28 |
| 2.3 | Fundamental regions | 30 |
| 2.4 | Modular functions | 34 |

2.5 Special values of $J$ 39
2.6 Modular functions as rational functions of $J$ 40
2.7 Mapping properties of $J$ 40
2.8 Application to the inversion problem for Eisenstein series 42
2.9 Application to Picard's theorem 43
*Exercises for Chapter 2* 44

Chapter 3
*The Dedekind eta function*

3.1 Introduction 47
3.2 Siegel's proof of Theorem 3.1 48
3.3 Infinite product representation for $\Delta(\tau)$ 50
3.4 The general functional equation for $\eta(\tau)$ 51
3.5 Iseki's transformation formula 53
3.6 Deduction of Dedekind's functional equation from Iseki's formula 58
3.7 Properties of Dedekind sums 61
3.8 The reciprocity law for Dedekind sums 62
3.9 Congruence properties of Dedekind sums 64
3.10 The Eisenstein series $G_2(\tau)$ 69
*Exercises for Chapter 3* 70

Chapter 4
*Congruences for the coefficients of the modular function j*

4.1 Introduction 74
4.2 The subgroup $\Gamma_0(q)$ 75
4.3 Fundamental region of $\Gamma_0(p)$ 76
4.4 Functions automorphic under the subgroup $\Gamma_0(p)$ 78
4.5 Construction of functions belonging to $\Gamma_0(p)$ 80
4.6 The behavior of $f_p$ under the generators of $\Gamma$ 83
4.7 The function $\varphi(\tau) = \Delta(q\tau)/\Delta(\tau)$ 84
4.8 The univalent function $\Phi(\tau)$ 86
4.9 Invariance of $\Phi(\tau)$ under transformations of $\Gamma_0(q)$ 87
4.10 The function $j_p$ expressed as a polynomial in $\Phi$ 88
*Exercises for Chapter 4* 91

Chapter 5
*Rademacher's series for the partition function*

5.1 Introduction 94
5.2 The plan of the proof 95
5.3 Dedekind's functional equation expressed in terms of $F$ 96
5.4 Farey fractions 97

5.5 Ford circles 99
5.6 Rademacher's path of integration 102
5.7 Rademacher's convergent series for $p(n)$ 104
*Exercises for Chapter 5* 110

Chapter 6

*Modular forms with multiplicative coefficients*

6.1 Introduction 113
6.2 Modular forms of weight $k$ 114
6.3 The weight formula for zeros of an entire modular form 115
6.4 Representation of entire forms in terms of $G_4$ and $G_6$ 117
6.5 The linear space $M_k$ and the subspace $M_{k,0}$ 118
6.6 Classification of entire forms in terms of their zeros 119
6.7 The Hecke operators $T_n$ 120
6.8 Transformations of order $n$ 122
6.9 Behavior of $T_n f$ under the modular group 125
6.10 Multiplicative property of Hecke operators 126
6.11 Eigenfunctions of Hecke operators 129
6.12 Properties of simultaneous eigenforms 130
6.13 Examples of normalized simultaneous eigenforms 131
6.14 Remarks on existence of simultaneous eigenforms in $M_{2k,0}$ 133
6.15 Estimates for the Fourier coefficients of entire forms 134
6.16 Modular forms and Dirichlet series 136
*Exercises for Chapter 6* 138

Chapter 7

*Kronecker's theorem with applications*

7.1 Approximating real numbers by rational numbers 142
7.2 Dirichlet's approximation theorem 143
7.3 Liouville's approximation theorem 146
7.4 Kronecker's approximation theorem: the one-dimensional case 148
7.5 Extension of Kronecker's theorem to simultaneous approximation 149
7.6 Applications to the Riemann zeta function 155
7.7 Applications to periodic functions 157
*Exercises for Chapter 7* 159

Chapter 8

*General Dirichlet series and Bohr's equivalence theorem*

8.1 Introduction 161
8.2 The half-plane of convergence of general Dirichlet series 161
8.3 Bases for the sequence of exponents of a Dirichlet series 166

8.4 Bohr matrices 167
8.5 The Bohr function associated with a Dirichlet series 168
8.6 The set of values taken by a Dirichlet series $f(s)$ on a line $\sigma = \sigma_0$ 170
8.7 Equivalence of general Dirichlet series 173
8.8 Equivalence of ordinary Dirichlet series 174
8.9 Equality of the sets $U_f(\sigma_0)$ and $U_g(\sigma_0)$ for equivalent Dirichlet series 176
8.10 The set of values taken by a Dirichlet series in a neighborhood of the line $\sigma = \sigma_0$ 176
8.11 Bohr's equivalence theorem 178
8.12 Proof of Theorem 8.15 179
8.13 Examples of equivalent Dirichlet series. Applications of Bohr's theorem to $L$-series 184
8.14 Applications of Bohr's theorem to the Riemann zeta function 184
*Exercises for Chapter 8* 187

Supplement to Chapter 3 190
