Excursions into Combinatorial Geometry

With 264 Figures

Springer

Table of Contents

I.	Linearity	1
1.1	Linear sets	1
1.2	Trans and supporting hyperplanes	12
1.3	Convexity	13
1.4	Linear and subspaces	14
1.5	The linearity of the operator "sup"	16
1.6	Linear cones	17
1.7	The Farkas Lemma and its generalization	18
1.8	Separate systems of linear cones	20
II.	Orthogonality in normed spaces	22
2.1	The definition of orthogonal sets	22
2.2	Support properties of orthogonal sets	24
2.3	Properties of orthogonal sets	25
2.4	The dual of normed spaces	26
2.5	Separability of normed sets	27
2.6	The Helly character of norm finiteness	28
2.7	Orthogonal sets	29
III.	Weakness	30
3.1	The bounded and the weak topology	30
3.2	The weak* topology	31
3.3	Some consequences of the Hahn-Banach	32
3.4	The definition of W -norm sets	33
3.5	Upper semi-continuity of the W -norm ball	34
3.6	Supporting points of W -norm bodies	35
3.7	The Helly character of W -norm sets	36
3.8	Some applications of W -norms	37
3.9	Some remarks on connecting between W -norms and W -norms	38
IV.	The Hahn-Banach-Nagata Theorem	39
4.1	The theorem of Hahn-Banach-Nagata and its generalization	39

2. Table of Contents

0.1	Characterization of vector spaces with unit and H^1 in it	179
0.2	Characterization of H^1 in vector spaces with unit	181
0.3	The H^1 -spaces without particular interest	182
0.4	The H^1 -spaces with particular interest	183
0.5	The compact, convex bodies with unit and $H^1 = 1$	184
0.6	Convexly generated bodies	185
1.	Bourgin's partition problem	189
1.1	Characterization of the problem and a survey of results	189
1.2	Studies of constant width in Euclidean and normed spaces	191
1.3	Bourgin's problem in normed space	193
2.1.	Characterization concerning unit identification	195
2.2	The convex problem and a survey of results	195
2.3	The hypothesis of Anthony Michael Shadrin	196
2.4	The bodies whose H^1 is functionally L^1 on $\mathbb{R}^n$	199
2.5	Mean identification of convex bodies	201
2.6	Extension to the value of the functional $\mu(H^1)$	202
2.2.1.	Classical and geometric geometry of body bodies	202
2.2.2	The geometric representation of convexity	202
2.2.3	Body bodies of a compact, convex body	207
2.2.4	Definition of body bodies	208
2.2.5	Solution of the identification problem for body bodies	209
2.2.6	Solution of the identification problem for body bodies	209
2.2.7	Minimal body spaces	210
2.2.8.	Some research problems	210
