# Contents

|                                                            |           |
|------------------------------------------------------------|-----------|
| Preface.....                                               | ix        |
| About the authors .....                                    | xi        |
| List of abbreviations .....                                | xiii      |
| <b>Chapter 1 Virtualization .....</b>                      | <b>1</b>  |
| 1.1 Introduction.....                                      | 1         |
| 1.2 Virtual memory .....                                   | 2         |
| 1.2.1 Virtual memory operation .....                       | 3         |
| 1.2.2 Virtual and physical memory mapping .....            | 5         |
| 1.3 Server virtualization.....                             | 7         |
| 1.3.1 Importance of virtualizing servers .....             | 8         |
| 1.3.2 Hypervisor role in server virtualization.....        | 9         |
| 1.3.3 Types of virtualization.....                         | 15        |
| 1.3.4 Server virtualization in operation.....              | 16        |
| 1.4 Storage virtualization.....                            | 17        |
| 1.4.1 Computer storage operation.....                      | 17        |
| 1.4.2 Network-attached storage .....                       | 18        |
| 1.4.3 Storage-area networks.....                           | 18        |
| 1.4.4 Server-based storage virtualization.....             | 20        |
| 1.4.5 Storage-network-based storage virtualization .....   | 22        |
| 1.4.5.1 In-band.....                                       | 22        |
| 1.4.5.2 Out-of-band.....                                   | 23        |
| 1.4.6 Storage-controller-based storage virtualization..... | 25        |
| <b>Chapter 2 Software-defined networking.....</b>          | <b>27</b> |
| 2.1 Introduction.....                                      | 27        |
| 2.2 Network limitations .....                              | 27        |
| 2.3 Network control plane .....                            | 31        |
| 2.3.1 Forwarding function.....                             | 33        |
| 2.3.2 Network state function .....                         | 34        |
| 2.3.3 Configuration function .....                         | 37        |
| 2.3.4 Separation of functionality.....                     | 40        |
| 2.4 Applications.....                                      | 41        |

|                                                      |           |
|------------------------------------------------------|-----------|
| <b>Chapter 3 SDN implementation .....</b>            | <b>43</b> |
| 3.1 Introduction.....                                | 43        |
| 3.2 SDN design.....                                  | 43        |
| 3.2.1 Separation of the control and data planes..... | 44        |
| 3.2.2 Edge-oriented networking.....                  | 44        |
| 3.3 SDN operation.....                               | 47        |
| <b>Chapter 4 Service providers and SDN .....</b>     | <b>51</b> |
| 4.1 Introduction.....                                | 51        |
| 4.2 Telecommunication SDN attributes.....            | 52        |
| 4.3 Telecommunication SDN services.....              | 54        |
| <b>Chapter 5 SDN development.....</b>                | <b>61</b> |
| 5.1 Introduction.....                                | 61        |
| 5.2 Existing network limitations.....                | 61        |
| 5.3 Programmable networks .....                      | 62        |
| 5.4 Network/application information.....             | 63        |
| 5.5 Legacy to SDN.....                               | 64        |
| 5.6 SDN application services.....                    | 66        |
| 5.6.1 Service-engineered path.....                   | 67        |
| 5.6.2 Service appliance pooling .....                | 67        |
| 5.6.3 Content request routing.....                   | 67        |
| 5.6.4 Bandwidth calendaring.....                     | 68        |
| 5.6.5 Social networking.....                         | 68        |
| <b>Chapter 6 Network vendors and SDN.....</b>        | <b>71</b> |
| 6.1 Introduction.....                                | 71        |
| 6.2 Cisco.....                                       | 71        |
| 6.3 VMware.....                                      | 74        |
| 6.4 Juniper.....                                     | 75        |
| 6.5 OpenDaylight.....                                | 77        |
| 6.6 Big Switch networks.....                         | 78        |
| <b>Chapter 7 Google and SDN .....</b>                | <b>81</b> |
| 7.1 Introduction.....                                | 81        |
| 7.2 Earlier network management .....                 | 81        |
| 7.3 Motivation for solution .....                    | 83        |
| 7.4 Network testing.....                             | 87        |
| 7.5 Simulating the Google WAN .....                  | 88        |
| 7.6 Google and SDN .....                             | 89        |
| 7.7 Google's G-Scale network.....                    | 90        |
| 7.7.1 Google's G-Scale network hardware.....         | 91        |
| 7.7.2 Google SDN deployment.....                     | 92        |

|                  |                                                                                 |            |
|------------------|---------------------------------------------------------------------------------|------------|
| 7.7.2.1          | Bandwidth brokering and traffic engineering.....                                | 96         |
| 7.7.2.2          | Deployment results.....                                                         | 101        |
| 7.8              | Implementation challenges.....                                                  | 104        |
| 7.9              | Lessons learned.....                                                            | 105        |
| <b>Chapter 8</b> | <b>OpenFlow.....</b>                                                            | <b>107</b> |
| 8.1              | Introduction.....                                                               | 107        |
| 8.2              | Overview of the OpenFlow switch specification.....                              | 108        |
| 8.2.1            | OpenFlow ports.....                                                             | 110        |
| 8.2.2            | OpenFlow packet-processing pipeline.....                                        | 110        |
| 8.2.2.1          | Flow tables.....                                                                | 111        |
| 8.2.2.2          | Matching.....                                                                   | 112        |
| 8.2.2.3          | Table-miss.....                                                                 | 113        |
| 8.2.2.4          | Flow removal.....                                                               | 113        |
| 8.2.2.5          | Meter table.....                                                                | 114        |
| 8.2.2.6          | Instructions.....                                                               | 115        |
| 8.2.2.7          | Action set.....                                                                 | 115        |
| 8.2.2.8          | Action list.....                                                                | 117        |
| 8.3              | OpenFlow channel.....                                                           | 117        |
| 8.3.1            | Message handling.....                                                           | 118        |
| 8.3.2            | OpenFlow channel connections.....                                               | 118        |
| 8.4              | Controller modes.....                                                           | 119        |
| 8.4.1            | Auxiliary connection use for performance and reliability.....                   | 121        |
| 8.4.2            | Flow table synchronization.....                                                 | 122        |
| 8.4.3            | Bundle messages.....                                                            | 122        |
| 8.5              | OpenFlow configuration-and-management protocol.....                             | 123        |
| 8.5.1            | Remote configuration.....                                                       | 123        |
| 8.5.2            | Connection establishment between switch and controller.....                     | 124        |
| 8.5.3            | OF-CONFIG transport protocol.....                                               | 125        |
| 8.6              | The conformance test specification for OpenFlow Switch Specification 1.0.1..... | 125        |
| 8.7              | The OpenFlow™ conformance testing program.....                                  | 127        |
| <b>Chapter 9</b> | <b>SDN evolution.....</b>                                                       | <b>129</b> |
| 9.1              | Introduction.....                                                               | 129        |
| 9.2              | SDN and enterprise networks.....                                                | 130        |
| 9.3              | SDN and transport networks.....                                                 | 132        |
| 9.4              | SDN and optical transport networks.....                                         | 134        |
| 9.5              | Increasing WAN utilization with SDN.....                                        | 136        |
| 9.6              | How scalable are software-defined networks?.....                                | 141        |
| 9.6.1            | SDN scalability issues.....                                                     | 141        |
| 9.6.2            | Controller designs for scalability.....                                         | 141        |

|       |                                                                      |     |
|-------|----------------------------------------------------------------------|-----|
| 9.6.3 | Potential SDN scalability issues .....                               | 143 |
| 9.6.4 | Network types.....                                                   | 145 |
| 9.6.5 | Next steps.....                                                      | 146 |
| 9.7   | SDN management.....                                                  | 147 |
| 9.7.1 | Network state queries using Frenetic .....                           | 148 |
| 9.7.2 | Network policy creation using Frenetic .....                         | 149 |
| 9.7.3 | Consistent updates with Frenetic .....                               | 149 |
| 9.8   | Elastic and distributed SDN controllers.....                         | 150 |
| 9.8.1 | Switch migration using the ElastiCon distributed<br>controller ..... | 153 |
| 9.8.2 | Load adaptation .....                                                | 155 |
| 9.9   | Summary .....                                                        | 156 |
|       | References .....                                                     | 159 |
