Contents

Preface	xi
Author	xv
1 Introduction	1
1.1 Ordinary differential equations	1
1.2 The modelling process	4
2 Elementary solution methods for simple ODEs	13
2.1 Simple ODEs	13
2.1.1 Simple ODE of 1. type, $y' = f(x)$	13
2.1.2 Simple ODE of 2. type, $y' = f(y)$	14
2.1.3 Simple ODE of 3. type, $y' = f(x)g(y)$	14
2.1.4 Simple ODE of 4. type, $y' = f(ax + by + d)$	15
2.1.5 Simple ODE of 5. type, $y' = f(\frac{y}{x})$	15
2.2 Linear ODEs	16
2.3 Method of variation of the constants	16
2.4 Bernoulli's differential equation	18
2.5 Riccati's differential equation	19
2.6 Exact differential equations	20
3 Theory of ordinary differential equations	25
3.1 The Cauchy problem and existence of solutions	25
3.2 Euler's method	26
3.3 Uniqueness of solutions	30
3.4 The Carathéodory theorem	34
4 Systems of ordinary differential equations	39
4.1 Systems of first-order ODEs	39
4.2 Dependence of solutions on the initial conditions	41
4.3 Systems of linear ODEs	48
4.4 Systems of linear homogeneous ODEs	49
4.5 The d'Alembert reduction method	52

4.6	Nonhomogeneous linear systems	55
4.7	Linear systems with constant coefficients	57
4.8	The exponential matrix	65
4.9	Linear systems with periodic coefficients	71
5	Ordinary differential equations of order n	77
5.1	Ordinary differential equations of order n in normal form . . .	77
5.2	Linear differential equations of order n	78
5.3	The reduction method of d'Alembert	80
5.4	Linear ODEs of order n with constant coefficients	81
5.5	Nonhomogeneous ODEs of order n	83
5.6	Oscillatory solutions	85
6	Stability of ODE systems	89
6.1	Local stability of ODE systems	89
6.2	Stability of linear ODE systems	94
6.3	Stability of nonlinear ODE systems	96
6.4	Remarks on the stability of periodic ODE problems	97
6.5	Autonomous systems in the plane	99
6.6	The Lyapunov method	106
6.7	Limit points and limit cycles	109
6.8	Population dynamics	114
6.9	The Lorenz model	125
6.10	Synchronisation	130
7	Boundary and eigenvalue problems	139
7.1	Linear boundary-value problems	139
7.2	Sturm-Liouville eigenvalue problems	142
8	Numerical solution of ODE problems	149
8.1	One-step methods	149
8.2	Motion in special relativity	166
8.3	The Kepler problem	174
8.4	Approximation of Sturm-Liouville problems	179
8.5	The shape of a drop on a flat surface	185
9	ODEs and the calculus of variations	189
9.1	Existence of a minimum	189
9.2	Optimality conditions	194
9.2.1	First-order optimality conditions	197
9.2.2	Second-order optimality conditions	198

9.3	The Euler-Lagrange equations	201
9.3.1	Direct and indirect numerical methods	206
9.3.2	Unilateral constraints	207
9.3.3	Free boundaries	208
9.3.4	Equality constraints	209
9.4	The Legendre condition	212
9.5	The Weierstrass-Erdmann conditions	216
9.6	Optimality conditions in Hamiltonian form	220
10	Optimal control of ODE models	225
10.1	Formulation of ODE optimal control problems	225
10.2	Existence of optimal controls	227
10.3	Optimality conditions	232
10.4	Optimality conditions in Hamiltonian form	239
10.5	The Pontryagin's maximum principle	243
10.6	Numerical solution of ODE optimal control problems	258
10.7	A class of bilinear optimal control problems	263
10.8	Linear-quadratic feedback-control problems	270
11	Inverse problems with ODE models	275
11.1	Inverse problems with linear models	275
11.2	Tikhonov regularisation	279
11.3	Inverse problems with nonlinear models	283
11.4	Parameter identification with a tumor growth model	284
12	Differential games	289
12.1	Finite-dimensional game problems	289
12.2	Infinite-dimensional differential games	295
12.3	Linear-quadratic differential Nash games	298
12.4	Pursuit-evasion games	304
13	Stochastic differential equations	309
13.1	Random variables and stochastic processes	309
13.2	Stochastic differential equations	314
13.3	The Euler-Maruyama method	321
13.4	Stability	324
13.5	Piecewise deterministic processes	327
14	Neural networks and ODE problems	331
14.1	The perceptron and a learning scheme	331
14.2	Approximation properties of neural networks	339

14.3 The neural network solution of ODE problems	345
14.4 Parameter identification with neural networks	350
14.5 Deep neural networks	354
Appendix Results of analysis	357
A.1 Some function spaces	357
A.1.1 Spaces of continuous functions	357
A.1.2 Spaces of integrable functions	359
A.1.3 Sobolev spaces	359
A.2 The Arzelà-Ascoli theorem	362
A.3 The Gronwall inequality	364
A.4 The implicit function theorem	364
A.5 The Lebesgue dominated convergence theorem	366
Bibliography	369
Index	381
