RATIONAL MECHANICS

The Classic Notre Dame Course

R. Catesby Taliaferro

Edited by
A. Hahn, T. Banchoff,
and F. Crosson

DOVER PUBLICATIONS, INC.
Mineola, New York

Contents

Photographic Portrait of R. Catesby Taliaferro vi

Autobiographical Remarks by R. Catesby Taliaferro vii

Catesby Taliaferro: A Memoir by Otto Bird xiii

Further Biographical Remarks by John Derwent xv

On Being a Student of Dr. R. Catesby Taliaferro by Thomas Banchoff xvii

Preface by Alexander Hahn xxiii

1 Greek Celestial Mechanics **1**

A The System of Hypparchus and Ptolemy 2

A.1 The Appearances 2

A.2 The Theory and Its Mathematical Instruments 8

A.3 Solar Theory 14

A.4 The Theory of Venus 17

A.5 The Theory of Mars 22

A.6 Apollonius' Theorem on Retrogradation and Stations . 32

A.7 Latitudinal Variations 34

A.8 Some Results of Lunar Theory 37

B Heliocentric Theories 39

B.1 Transition to the Theory of Aristarchus 39

B.2 The Heliocentric Theory of Aristarchus 42

B.3 The Copernican Emendations 47

2 The Keplerian Revolution **53**

A The Youthful Manifesto 54

B The Commentaries on Mars 56

C The Magnetic Theory of Planetary Motion 71

D The Contributions of Terrestrial Mechanics 74

E The Newtonian Synthesis 78

3 The Mathematical Apparatus **87**
A Vector Spaces and Their Applications 87
A.1 Groups and Vector Spaces 87
A.2 The Notion of Dimension 90
A.3 Linear Forms and Dual Vector Spaces 95
A.4 Linear Mappings 99
A.5 Matrices on F as Representations of Linear Mappings. . 102
A.6 Bilinear Forms and Tensor Products 108
A.7 The Exterior Product and Determinants 115
A.8 Applications of Determinants. 124
A.9 Inner Products and Orthogonality. 128
A.10 Geometrical Interpretation of the Inner Product in Euclidean n-Space. 134
B Elementary Differential Geometry 140
B.1 Curves Given by Vector Functions of a Real Variable and Derivatives of Vectors. 141
B.2 Arc-length and Curvature 143
B.3 The Moving Trihedral and Frenet Formulas 150

4 The Dynamics of a Particle **155**
A The First Integrations. 155
A.1 The Energy-Work Equation. 155
A.2 The Impulse-Momentum Equation. 158
A.3 The Ballistic Pendulum. 159
B Fields of Acceleration 162
B.1 The Field of Constant Acceleration 162
B.2 The Inverse-square Field 169
B.3 The Elastic Field 179
B.4 Elastic Field with Added Conditions 182
B.5 General Formulas for Central Fields 184
B.6 Note on Dimensions 186

5 Displacement and Kinematics **187**
A The Displacement of a Rigid Body. 187
B The Kinematics of a Rigid Body. 197
C Motion with Respect to Moving Rigid Frames. 202
D Applications to the Rotating Earth 208
E The Euler Angles. 214

6 Theories of Light **217**
A The Emission Theory of Descartes and Newton 218
B The Wave Theory of Huygens. 225
C Malus' Experiments on Double Refraction and Brewsters' Law. 230
D Kinematics of Wave-Motion 234
E The Dynamics of the Vibrating String. 244
F The Dynamic Theory of Young and Fresnel 250
G The Fresnel Theory for Production 260
H Aberration, and the Fresnel Theory. 268
I The Experiments of Fizeau and Hook. 275
J The Michelson-Moreley Experiment. 277

7 The Special Theory of Relativity **283**
A Principles of Special Relativity 283
B Dynamics of Special Relativity 290
C Lorentz Transformations of Wave-Phase 297
D DeBroglie Theory 301

R. Catesby Taliaferro Handwritten Exam Questions **309**

Index **311**
