Contents

	Preface	ix
	Preface to the English edition	xi
1	**Introduction**	**1**
	1.1 Notation and preliminaries	1
	1.2 Groups	10
	1.3 Algebraic structures	27
	1.4 Vector spaces	49
	1.5 Geometric structures	60
2	**Fundamental properties of finite groups**	**85**
	2.1 The Sylow theorems	85
	2.2 Direct products and semi-direct products	88
	2.3 Normal series	93
	2.4 Finite Abelian groups	98
	2.5 p-groups	99
	2.6 Groups with operators	102
	2.7 Group extensions and the theorem of Schur–Zassenhaus	105
	2.8 Normal π-complements	110
	2.9 Normal p-complements	113
	2.10 Representation of finite groups	122
	2.11 Frobenius groups	141
3	**Fundamental theory of permutation groups**	**147**
	3.1 Permutations	147
	3.2 Transitivity and intransitivity	151
	3.3 Primitivity and imprimitivity	158
	3.4 Multiple transitivity	162
	3.5 Normal subgroups	172

3.6 Permutation groups of prime degree 176
3.7 Primitive permutation groups 183

4 Examples – symmetric groups and general linear groups 208
4.1 Conjugacy classes and composition series of the symmetric and alternating group 208
4.2 Conditions for being a symmetric or alternating group 211
4.3 Subgroups and automorphism groups of S^Ω and A^Ω 216
4.4 Generators and fundamental relations for S_n and A_n 222
4.5 The structure of general semi-linear groups 226
4.6 Properties of $PSL(V)$ as a permutation group (dim $V \geq 3$) 235
4.7 Symmetric groups and general linear groups of low order 237

5 Finite projective geometry 249
5.1 Projective planes and affine planes 249
5.2 Higher-dimensional projective geometry 286
5.3 Characterization of projective geometries 294

6 Finite groups and finite geometries 298
6.1 Designs constructed from 2-transitive groups 298
6.2 Characterization of projective transformation groups 307

Epilogue 316
Index 325
