1 Introduction
George Delic and Mary F. Wheeler

11 GLOBAL-CIRCULATION MODELS

13 Computational Aspects of the GENESIS Earth Systems Modeling Project
Starley L. Thompson and David Pollard

21 Climate Systems Modeling on Massively Parallel Processing Computers at Lawrence Livermore National Laboratory
M.F. Wehner, A.A. Mirin, J.H. Bolstad, U.E. Creach, P.B. Duffy, W.P. Dannevik, P.G. Eltgroth, C.M. Matarazzo, and B. Chan

31 A Practical Finite Difference Scheme for Advection on a Sphere
Yonghong Li and Julius S. Chang

45 REGIONAL CIRCULATION MODELS

47 The Environmental Decision Support System: Air Quality Modeling and Beyond
John Ambrosiano, Rajini Balay, Carlie Coats, Alison Eyth, Steve Fine, Dan Hils, Ted Smith, Steve Thorpe, Tim Turner, and Mladen Vouk

59 Nested and Adaptive Grids for Multiscale Air Quality Modeling
M. Talat Odman, Rohit Mathur, Kiran Alapaty, Ravi K. Srivastava, D. Scott McRae, and Robert J. Yamartino

69 A High Resolution Adaptive Projection Method for Regional Atmospheric Modeling
Ann S. Almgren, John B. Bell, Phillip Colella, Louis H. Howell, and Michael L. Welcome

81 Scalability of a Portable Distributed Multiscale Air Quality Model
Edward Segall, Peter Steenkiste, Naresh Kumar, and Armistead Russell

87 Environmental Modeling on the C90-T3D Heterogeneous System
Edward Segall, Kip Walker, Peter Steenkiste, and Armistead Russell

93 AQUATIC SYSTEMS

95 Issues in Convergence Studies in Geophysical Flow Computations
Joannes J. Westerink and Patrick J. Roache

109 Modeling Short-Term Behavior of Dredged Material Disposed in Very Shallow and Very Deep Coastal Waters
Edward H. Dettmann and Mohamed A. Abdelrhman

117 Two-Dimensional Modeling of Current Circulation and Contaminant Transport in Surface Waters
Mohamed A. Abdelrhman and Edward H. Dettmann

125 Hydrodynamic Modeling for the Lake Michigan Mass Balance Project
D. Beletsky, W.P. O'Connor, and D.J. Schwab

129 Numerical Modeling of the Transport and Fate of Hydrophobic Contaminants and Fine-Grained Sediments in Surface Waters
C. Kirk Ziegler and Wilbert Lick

139 Responses of Structured Plankton Population to Toxicant: Computational Aspects of Modeling
Yuri M. Pils

143 Computational Design and Optimization of the EFDC/HEM3D Surface Water Hydrodynamic and Eutrophication Models
J.M. Hamrick and T.S. Wu

157 Benchmarking the EFDC/HEM3D Surface Water Hydrodynamic and Eutrophication Models
T.S. Wu, J.M. Hamrick, S.C. McCutcheon, and R.B. Ambrose, Jr.

163 Cross Media Coupling of Mass Balance Models for Toxic Chemicals on Massively Parallel Platforms
Mark L. Green and Joseph V. DePinto

169 An Automated Land Analysis System (ALAS) for Applications at a Range of Spatial Scales: Watershed to Global
Norman L. Miller

175 GROUNDWATER TRANSPORT OF CONTAMINANTS

177 Field-Derived Transformation Rates for Modeling Natural Bioattenuation of Trichloroethene and its Degradation Products
James W. Weaver, John T. Wilson, Don H. Kampbell, and Mary E. Randolph

187 Modeling Dense Nonaqueous Phase Liquid Field Projects
Gary A. Pope

201 A Scalable Approach to Modeling Groundwater Flow on Massively Parallel Computers
Steven F. Ashby, Robert D. Falgout, and Andrew F.B. Tompson

217 New Computational Approaches for Chemically Reactive Transport in Porous Media
Mary F. Wheeler, Todd Arbogast, Steven Bryant, Clinton N. Dawson, Fredrik Saaf, and Chong Wang

227 The Need for Multidisciplinary Involvement in Groundwater Contaminant Simulations
Richard E. Ewing

247 Numerical Modeling of Flow and Contaminant Transport in the Subsurface
Gour-Tsyh (George) Yeh, Jing-Ru (Ruth) Cheng, and Hwai-Ping (Pearce) Cheng

259 Pore-Scale Flow and Transport Calculations Using the Lattice Boltzmann Method
R.S. Maier, Y. Kutsovsky, S. Nivarthi, H.T. Davis, D.W. Grunau, S. Howington, and R.S. Bernard

265 3-D Adaptive Grid Modeling for Groundwater Mechanics
J.H. Schmidt

271 Pre-Asymptotic Transport through Porous Media
J.F. Peters and S.E. Howington

281 A Simulation and Decision Analysis Approach to Locating Dense Nonaqueous Phase Liquids in Subsurface Sediments
Brian Borchers, Stephen H. Conrad, Roger Cox, Robert J. Glass, Jr., and Erik K. Webb

287 Computational Challenges Associated with Mathematical Optimization of Soil and Groundwater Remediation Systems
Changlin Huang and Alex S. Mayer

293 INVERSE PROBLEM METHODS FOR THE ENVIRONMENT

295 Application of Inverse Scattering and Other Refraction Corrected Methods to Environmental Imaging with Acoustic or Electromagnetic Energy
Steven A. Johnson, David T. Borup, James W. Wiskin, Michael J. Berggren, Michael S. Zhdanov, Kyle Bunch, and Richard Eidens

313 Requirements for the Use of Ground Penetrating Radar as an Organic Contaminant Detection Tool
Roelof Versteeg

317 Simulation and Inversion of Acoustic Response from Metallic Objects Buried in Attenuating Sediments
Joakim O. Blanch and William W. Symes

329 Parameter Estimation Issues for Flow in Porous Media with Multiple Length Scales
Michael S. Pilant and Hongsen Chen

337 CRAY T3D ALGORITHMS AND OPTIMIZATIONS

339 Single Processing Element Optimization Techniques for the Cray T3D System
Jeff Brooks

353 Implementation of a Conjugate Gradient Solver for MODFLOW on the Cray T3D
Dennis Morrow and John Thorp

365 Algorithm Design for Consistency of Numerical Results and Optimal Performance for the Cray T3D
David G. Strenski
