MICHAEL W. FRAZIER
Michigan State University

Wavelets: Mathematics and Applications

CRC PRESS

Boca Raton London Tokyo

Contents

Preface	vii
Contributors	viii
Introduction	
<i>John J. Benedetto and Michael W. Frazier</i>	1
I Core Material	21
1 Construction of orthonormal wavelets	
<i>Robert S. Strichartz</i>	23
2 An introduction to the orthonormal wavelet transform on discrete sets	
<i>Michael W. Frazier and Arun Kumar</i>	51
3 Gabor frames for L^2 and related spaces	
<i>John J. Benedetto and David F. Walnut</i>	97
4 Dilation equations and the smoothness of compactly supported wavelets	
<i>Christopher Heil and David Colella</i>	163
5 Remarks on the local Fourier bases	
<i>Pascal Auscher</i>	203
II Wavelets and Signal Processing	219
6 The sampling theorem, φ -transform, and Shannon wavelets for $\mathbb{R}$, $\mathbb{Z}$, $\mathbb{T}$, and $\mathbb{Z}_N$	
<i>Michael W. Frazier and Rodolfo Torres</i>	221
7 Frame decompositions, sampling, and uncertainty principle inequalities	
<i>John J. Benedetto</i>	247
8 Theory and practice of irregular sampling	
<i>Hans G. Feichtinger and Karlheinz Gröchenig</i>	305
9 Wavelets, probability, and statistics: Some bridges	
<i>Christian Houdré</i>	365
10 Wavelets and adapted waveform analysis	
<i>Ronald R. Coifman and M. Victor Wickerhauser</i>	399

11	Near optimal compression of orthonormal wavelet expansions <i>C.-c. Hsiao, B. Jawerth, B.J. Lucier, and X. M. Yu</i>	425
III	Wavelets and Partial Differential Operators	447
12	On wavelet-based algorithms for solving differential equations <i>G. Beylkin</i>	449
13	Wavelets and nonlinear analysis <i>Stéphane Jaffard</i>	467
14	Scale decomposition in Burgers' equation <i>Frédéric Heurtaux, Fabrice Planchon, and Mladen Victor Wickerhauser</i>	505
15	The Cauchy singular integral operator and Clifford wavelets <i>Lars Andersson, Björn Jawerth, and Marius Mitrea</i>	525
16	The use of decomposition theorems in the study of operators <i>Richard Rochberg</i>	547
	Index	571
