<i>PREFACE TO THE CLASSICS EDITION</i>	<i>xi</i>
<i>PREFACE</i>	<i>xiii</i>
1 INTRODUCTION	1
1-1. The Issues	1
1-2. Stopping Criteria	7
1-3. Machine Precision	11
1-4. Error Propagation	15
1-5. The Semiconductor Equation	21
1-6. An Algorithm for the Semiconductor Equation	23
1-7. Algorithm Evaluation	27
1-8. Extrapolation Techniques	30
Review Problems	33
References	37
2 ELIMINATION SCHEMES	39
2-1. Gaussian Elimination	39
2-2. Triangular Systems	47
2-3. Factorization	57
2-4. Special Matrices	70
2-5. Compact Elimination	99
2-6. Running Time	102
2-7. Repeated Solves	110

2-8.	Rank 1 Changes	112
2-9.	Determinants	115
2-10.	Vector Processing	117
2-11.	Parallel Processing	119
	Review Problems	123
	References	127
3	CONDITIONING	128
3-1.	An Example	128
3-2.	Vector Norms	130
3-3.	Matrix Norms	132
3-4.	Condition Number	136
3-5.	Geometric Series	141
	Review Problems	142
	References	144
4	NONLINEAR SYSTEMS	145
4-1.	Substitution Techniques	145
4-2.	Convergence Theory	155
4-3.	Newton's Method for Systems	164
4-4.	Alterations to Newton's Method	170
4-5.	Quasi-Newton Methods	175
4-6.	Global Techniques	178
4-7.	Conditioning	182
4-8.	Polynomial Equations	186
	Review Problems	188
	References	190
5	LEAST SQUARES	192
5-1.	Introduction	192
5-2.	Overdetermined Systems	195
5-3.	Underdetermined Systems	202
5-4.	Orthogonal Techniques	206
5-5.	The QR Factorization	208
5-6.	Givens Rotations	217
5-7.	Least Squares and the QR Factorization	224
5-8.	Orthonormal Bases	227
	Review Problems	233
	References	236

6 EIGENPROBLEMS	237
6-1. Applications	237
6-2. Diagonalization	241
6-3. Gerschgorin's Theorem	250
6-4. The Power Method	253
6-5. Deflation	263
6-6. The QR Method	269
6-7. Reduction to Hessenberg Form	274
6-8. Symmetric Reduction and Symmetric QR	278
6-9. Bisection Method	284
6-10. Lanczos Method	288
6-11. The Singular Value Decomposition and the Pseudoinverse	294
6-12. The Generalized Eigenproblem	303
6-13. Conditioning and Refinement	308
Review Problems	315
References	318
7 ITERATIVE METHODS	319
7-1. Justification	319
7-2. Splitting Techniques	320
7-3. Convergence	328
7-4. Iterative Refinement	335
7-5. Acceleration Techniques	338
7-6. The Multigrid Method	346
Review Problems	351
References	353
8 NUMERICAL SOFTWARE	355
8-1. EISPACK, LINPACK, MINPACK, and LAPACK	355
8-2. Sparse Matrix Packages	365
8-3. Software Libraries	371
APPENDIX 1. SUBROUTINE NAMES AND ARGUMENTS IN LAPACK	380
APPENDIX 2. SOLUTIONS TO EXERCISES	384
BIBLIOGRAPHY	405
INDEX	417

12.3	Generalized Conjugate Gradient Acceleration Procedures	339
12.4	Lanczos Acceleration	348
12.5	Acceleration Procedures for the GCW Method	351
12.6	An Example	354
Appendix A Chebyshev Acceleration Subroutine		357
Appendix B CCSI Subroutine		363
Appendix C SOR Subroutine		368
Bibliography		373
Index		381
