

ALAN DAVIES and PHILIP SAMUELS

University of Hertfordshire

An Introduction to Computational Geometry for Curves and Surfaces

CLARENDON PRESS - OXFORD

1996

Contents

Part I DIFFERENTIAL GEOMETRY	1
1 Plane curves	3
1.1 Arc length and unit speed parameterization	4
1.2 Curvature and the Frenet frame	5
1.3 Envelopes	9
1.4 Exercises	11
2 Space curves	18
2.1 Arc length and unit speed reparameterization	18
2.2 Curvature, torsion, and the Frenet frame	20
2.3 The Frenet approximation to a curve	24
2.4 A computation theorem	25
2.5 Envelopes of families of space curves	26
2.6 Exercises	28
3 Surfaces	41
3.1 Surfaces of revolution	42
3.2 The tangent plane and normal to a surface at a point	43
3.3 Metrical properties of surfaces and the first fundamental form	45
3.4 Ruled surfaces	49
3.5 Developable surfaces	52
3.6 A developable surface containing two given curves	53
3.7 Exercises	55
4 Curvature of a surface	63
4.1 Introduction	63
4.2 More on normal and geodesic curvature of a surface curve	69
4.3 Principal curvature and directions	71
4.4 Gaussian and mean curvature	75
4.5 Geometrical meaning of Gaussian curvature	76
4.6 The quadratic approximation to a surface	79
4.7 The Weingarten equations and matrix	83
4.8 The Gauss map and its connection with the Weingarten matrix	88

4.9	Lines of curvature in a surface	89
4.10	Gauss's view of curvature and the <i>Theorem Egregium</i>	92
4.11	Exercises	94
Part 2 COMPUTATIONAL GEOMETRY		109
5	Plane curves	111
5.1	Control points	111
5.2	Interpolation	112
5.3	Approximation	124
5.4	Exercises	136
6	Space curves	147
6.1	Ferguson cubic curves	147
6.2	Bézier cubic curves	148
6.3	Rational parametric curves	150
6.4	Non-uniform rational B-splines	153
6.5	Composite curves in three dimensions	155
6.6	Composite Ferguson curves	155
6.7	Composite Bézier curves	156
6.8	Composite rational Bézier cubic curves	157
6.9	Local adjustment of composite curves	158
6.10	Cubic splines in three dimensions	160
6.11	Exercises	160
7	Surface patches	169
7.1	Coons patches	169
7.2	Ferguson bicubic patches	171
7.3	Bézier patches	171
7.4	Rational surface patches	173
7.5	Possible difficulties	174
7.6	Exercises	175
8	Composite surfaces	184
8.1	Coons surfaces	184
8.2	Tensor product surfaces	185
8.3	Spline surfaces	186
8.4	Cubic B-spline surfaces	187
8.5	Bicubic Bézier surfaces	188
8.6	Lofted surfaces	191
8.7	The partial differential equation method	192
8.8	Exercises	194
Bibliography		201
Index		203
