CLARENDON PRESS • OXFORD
1996

CONTENTS

1	**Introduction**	1
2	**Black holes**	7
2.1	Introduction	7
2.2	Spherical collapse	10
2.3	Conformal diagrams and causal properties	15
	2.3.1 Asymptotically simple space–times	15
	2.3.2 Schwarzschild geometry	19
2.4	The Reissner–Nordström metrics	26
2.5	The Kerr metric	33
	2.5.1 Maximal extensions	33
	2.5.2 Ergoregion and event horizon	38
	2.5.3 Extraction of rotational energy; reversible and irreversible transformations	42
2.6	Geodesic equations in the Kerr metric	47
2.7	Perturbations of the Kerr metric	50
3	**Dynamics of a black hole in a background universe**	55
3.1	Introduction	55
3.2	Asymptotic expansions and matching	58
3.3	The lowest-order internal perturbations	64
3.4	Equations of motion	67
3.5	Effect of background on internal structure	69
3.6	The non-rotating case	79
3.7	Solution of external problem	81
3.8	A small black hole in the Brans–Dicke theory	83
3.9	Conclusions	87
4	**Interaction of two black holes in the slow-motion limit**	90
4.1	Introduction	90
4.2	Basic method—lowest orders	99
4.3	Computation of Q^i_{00}	105
4.4	Computation of $1\frac{1}{2}$ post-Newtonian metric terms	107
4.5	Explicit internal perturbations	108
4.6	Equations of motion and spin propagation	114
4.7	Comments and conclusions	119

5 Gravitational radiation from high-speed black-hole encounters 122
5.1 Introduction 122
5.2 Gravitational radiation from distant encounters 128
5.3 The incoming states 133
5.4 Evolution of the curved shocks by geometrical optics 139
5.5 The caustic region 147
5.6 Wave generation in the far-field curved shocks 155
5.7 The non-axisymmetric case 169
5.8 Conclusions 180

6 Axisymmetric black-hole collisions at the speed of light: perturbation treatment of gravitational radiation 182
6.1 Introduction 182
6.2 The boosted metric and the axisymmetric collision 188
6.3 The first-order calculation 198
6.4 The second-order calculation 203
6.5 A new mass-loss formula for the axisymmetric collision 207
6.6 Summary 212

7 Axisymmetric black-hole collisions at the speed of light: reduction to two independent variables and calculation of the second-order news function 215
7.1 Introduction 215
7.2 Reduction to two dimensions 217
7.3 The reduced differential equation 222
7.4 The Green function for the reduced equation 226
7.5 Second-order metric functions 229
7.6 Logarithmic terms 233
7.7 Transforming to a Bondi gauge at second order 243
7.8 Ambiguity in the news function 246
7.9 Comments 248

8 Axisymmetric black-hole collisions at the speed of light: gravitational radiation – results and conclusions 250
8.1 Introduction 250
8.2 Prediction of new mass-loss formula 251
8.3 The second-order news function 260
8.4 Discussion 263

9 Conclusion 265
9.1 Summary 265
9.2 Quantum directions 266
