TO THE READER	v
CONTENTS OF THE ELEMENTS OF MATHEMATICS SERIES	ix
INTRODUCTION	xix
CHAPTER I. FLAT MODULES	1
§ 1. Diagrams and exact sequences	1
1. Diagrams	1
2. Commutative diagrams	2
3. Exact sequences	3
4. The snake diagram	4
§ 2. Flat modules	9
1. Revision of tensor products	9
2. M-flat modules	10
3. Flat modules	12
4. Examples of flat modules	14
5. Flatness of quotient modules	15
6. Intersection properties	17
7. Tensor products of flat modules	19
8. Finitely presented modules	20
9. Extension of scalars in homomorphism modules	22
10. Extension of scalars: case of commutative rings	22
11. Interpretation of flatness in terms of relations	25
§ 3. Faithfully flat modules	27
1. Definition of faithfully flat modules	27
2. Tensor products of faithfully flat modules	30
3. Change of ring	31

CONTENTS

4. Restriction of scalars	31
5. Faithfully flat rings	32
6. Faithfully flat rings and finiteness conditions	34
7. Linear equations over a faithfully flat ring	35
§ 4. Flat modules and "Tor" functors	37
Exercises for § 1	39
Exercises for § 2	41
Exercises for § 3	49
Exercises for § 4	50
CHAPTER II. LOCALIZATION	51
§ 1. Prime ideals	51
1. Definition of prime ideals	51
2. Relatively prime ideals	53
§ 2. Rings and modules of fractions	55
1. Definition of rings of fractions	55
2. Modules of fractions	60
3. Change of multiplicative subset	64
4. Properties of modules of fractions	67
5. Ideals in a ring of fractions	70
6. Nilradical and minimal prime ideals	73
7. Modules of fractions of tensor products and homomorphism modules	75
8. Application to algebras	77
9. Modules of fractions of graded modules	78
§ 3. Local rings. Passage from the local to the global	80
1. Local rings	80
2. Modules over a local ring	82
3. Passage from the local to the global	87
4. Localization of flatness	91
5. Semi-local rings	92
§ 4. Spectra of rings and supports of modules	94
1. Irreducible spaces	94
2. Noetherian topological spaces	97
3. The prime spectrum of a ring	98
4. The support of a module	104

CONTENTS

§ 5. Finitely generated projective modules, Invertible fractional ideals	108
1. Localization with respect to an element	108
2. Local characterization of finitely generated projective modules	109
3. Ranks of projective modules	111
4. Projective modules of rank 1	114
5. Non-degenerate submodules	116
6. Invertible submodules	117
7. The group of classes of invertible modules	119
Exercises for § 1	121
Exercises for § 2	123
Exercises for § 3	136
Exercises for § 4	140
Exercises for § 5	146
CHAPTER III. GRADUATIONS, FILTRATIONS AND TOPOLOGIES	155
§ 1. Finitely generated graded algebras	155
1. Systems of generators of a commutative algebra	155
2. Criteria of finiteness for graded rings	156
3. Properties of the ring $A^{(d)}$	157
4. Graded prime ideals	160
§ 2. General results on filtered rings and modules	162
1. Filtered rings and modules	162
2. The order function	165
3. The graded module associated with a filtered module. ...	165
4. Homomorphisms compatible with filtrations	169
5. The topology defined by a filtration	170
6. Complete filtered modules	173
7. Linear compactness properties of complete filtered modules	176
8. The lift of homomorphisms of associated graded modules	177
9. The lift of families of elements of an associated graded module	179
10. Application: examples of Noetherian rings	183
11. Complete m -adic rings and inverse limits	185
12. The Hausdorff completion of a filtered module	187
13. The Hausdorff completion of a semi-local ring	192

CONTENTS

§ 3. m -adic topologies on Noetherian rings	195
1. Good filtrations	195
2. m -adic topologies on Noetherian rings	199
3. Zariski rings	201
4. The Hausdorff completion of a Noetherian ring	202
5. The completion of a Zariski ring	206
§ 4. Lifting in complete rings	209
1. Strongly relatively prime polynomials	209
2. Restricted formal power series	212
3. Hensel's Lemma	215
4. Composition of systems of formal power series	218
5. Systems of equations in complete rings	220
6. Application to decompositions of rings	225
§ 5. Flatness properties of filtered modules	226
1. Ideally Hausdorff modules	226
2. Statement of the flatness criterion	227
3. Proof of the flatness criterion	228
4. Applications	230
Exercises for § 1	232
Exercises for § 2	233
Exercises for § 3	245
Exercises for § 4	255
Exercises for § 5	259
CHAPTER IV. ASSOCIATED PRIME IDEALS AND PRIMARY DECOMPOSITION	261
§ 1. Prime ideals associated with a module	261
1. Definition of associated prime ideals	261
2. Localization of associated prime ideals	263
3. Relations with the support	265
4. The case of finitely generated modules over a Noetherian ring	265
§ 2. Primary decomposition	267
1. Primary submodules	267
2. The existence of a primary decomposition	270
3. Uniqueness properties in the primary decomposition	270
4. The localization of a primary decomposition	272

CONTENTS

5. Rings and modules of finite length	274
6. Primary decomposition and extension of scalars	279
§ 3. Primary decomposition in graded modules	283
1. Prime ideals associated with a graded module	283
2. Primary submodules corresponding to graded prime ideals	284
3. Primary decomposition in graded modules	285
Exercises for § 1	286
Exercises for § 2	290
Exercises for § 3	301
CHAPTER V. INTEGERS	303
§ 1. Notion of an integral element	303
1. Integral elements over a ring	303
2. The integral closure of a ring. Integrally closed domains	306
3. Examples of integrally closed domains	309
4. Completely integrally closed domains	312
5. The integral closure of a ring of fractions	314
6. Norms and traces of integers	316
7. Extension of scalars in an integrally closed algebra	318
8. Integers over a graded ring	320
9. Application: invariants of a group of automorphisms of an algebra	323
§ 2. The lift of prime ideals	325
1. The first existence theorem	325
2. Decomposition group and inertia group	330
3. Decomposition and inertia for integrally closed domains	337
4. The second existence theorem	343
§ 3. Finitely generated algebras over a field	344
1. The normalization lemma	344
2. The integral closure of a finitely generated algebra over a field	348
3. The Nullstellensatz	349
4. Jacobson rings	351
Exercises for § 1	355
Exercises for § 2	362
Exercises for § 3	370

CONTENTS

CHAPTER VI. VALUATIONS	375
§ 1. Valuation rings	375
1. The relation of domination between local rings	375
2. Valuation rings	376
3. Characterization of integral elements	378
4. Examples of valuation rings	379
§ 2. Places	381
1. The notion of morphism for laws of composition not every- where defined	381
2. Places	381
3. Places and valuation rings	383
4. Extension of places	384
5. Characterization of integral elements by means of places ..	385
§ 3. Valuations	385
1. Valuations on a ring	385
2. Valuations on a field	387
3. Translations	389
4. Examples of valuations	389
5. Ideals of a valuation ring	391
6. Discrete valuations	392
§ 4. The height of a valuation	393
1. Inclusion of valuation rings of the same field	393
2. Isolated subgroups of an ordered group	394
3. Comparison of valuations	395
4. The height of a valuation	396
5. Valuations of height 1	397
§ 5. The topology defined by a valuation	399
1. The topology defined by a valuation	399
2. Topological vector spaces over a field with a valuation ..	401
3. The completion of a field with a valuation	402
§ 6. Absolute values	403
1. Preliminaries on absolute values	403
2. Ultrametric absolute values	405
3. Absolute values on $\mathbf{Q}$	406
4. Structure of fields with a non-ultrametric absolute value ..	407
§ 7. Approximation theorem	412
1. The intersection of a finite number of valuation rings ...	412
2. Independent valuations	413
3. The case of absolute values	415

CONTENTS

§ 8. Extensions of a valuation to an algebraic extension	416
1. Ramification index. Residue class degree	416
2. Extension of a valuation and completion	418
3. The relation $\sum e_i f_i \leq n$	420
4. Initial ramification index	422
5. The relation $\sum e_i f_i = n$	423
6. Valuation rings in an algebraic extension	427
7. The extension of absolute values	428
§ 9. Application: locally compact fields	431
1. The modulus function on a locally compact field	431
2. Existence of representatives	432
3. Structure of locally compact fields	433
§ 10. Extensions of a valuation to a transcendental extension	434
1. The case of a monogenous transcendental extension	434
2. The rational rank of commutative group	437
3. The case of any transcendental extension	438
Exercises for § 1	441
Exercises for § 2	444
Exercises for § 3	446
Exercises for § 4	449
Exercises for § 5	454
Exercises for § 6	459
Exercises for § 7	460
Exercises for § 8	461
Exercises for § 9	470
Exercises for § 10	471
CHAPTER VII. DIVISORS	475
§ 1. Krull domains	475
1. Divisorial ideals of an integral domain	475
2. The monoid structure on $D(A)$	478
3. Krull domains	480

CONTENTS

4. Essential valuations of a Krull domain	482
5. Approximation for essential valuations	484
6. Prime ideals of height 1 in a Krull domain	485
7. Application: new characterizations of discrete valuation rings	487
8. The integral closure of a Krull domain in a finite extension of its field of fractions	487
9. Polynomial rings over a Krull domain	488
10. Divisor classes in Krull domains	489
§ 2. Dedekind domains	493
1. Definition of Dedekind domains	493
2. Characterizations of Dedekind domains	494
3. Decomposition of ideals into products of prime ideals	496
4. The approximation theorem for Dedekind domains	497
5. The Krull-Akizuki Theorem	499
§ 3. Factorial domains	502
1. Definition of factorial domains	502
2. Characterizations of factorial domains	502
3. Decomposition into extremal elements	504
4. Rings of fractions of a factorial domain	505
5. Polynomial rings over a factorial domain	505
6. Factorial domains and Zariski rings	506
7. Preliminaries on automorphisms of rings of formal power series	506
8. The preparation theorem	507
9. Factoriality of rings of formal power series	511
§ 4. Modules over integrally closed Noetherian domains	512
1. Lattices	512
2. Duality; reflexive modules	517
3. Local construction of reflexive modules	521
4. Pseudo-isomorphisms	523
5. Divisors attached to torsion modules	527
6. Relative invariant of two lattices	529
7. Divisor classes attached to finitely generated modules	531
8. Properties relative to finite extensions of the ring of scalars	535
9. A reduction theorem	540
10. Modules over Dedekind domains	543
Exercises for § 1	545
Exercises for § 2	550
