1984

Table of Contents

Chapter 1. Vector Fields in Finite Dimensional Spaces	1
§ 1. Extensions of Vector Fields	1
1.1 Vector Fields	1
1.2 Extensions of Vector Fields	2
1.3 Sard's Theorem	2
1.4 Extensions With a Minimal Number of Singular Points	3
§ 2. Homotopic Vector Fields	3
2.1 Deformations and Homotopic Fields	3
2.2 Homotopy Criteria	3
2.3 Homotopy Classes	4
§ 3. Rotation of Vector Fields	5
3.1 The Main Properties of the Rotation	5
3.2 Rotation in One-Dimensional Space	6
3.3 Rotation in Two-Dimensional Spaces	6
3.4 Rotation in n -Dimensional Space ($n \geq 2$)	7
§ 4. Theorems on Singular Points	8
4.1 Existence of Singular Points	8
4.2 Change of Domain	9
4.3 Algebraic Count of Singular Points	9
4.4 Index of the Singular Point at Infinity	10
§ 5. Hopf's Theorem	10
5.1 Homotopy Classification	10
5.2 Vector Fields Without Singularities	11
§ 6. Linear Vector Fields	12
6.1 Linear Fields	12
6.2 The Brouwer-Bohl Theorem	13
6.3 Computing the Index of Singular Points for Linearized Fields	14
6.4 Asymptotically Linear Fields	15
§ 7. Product Theorems	15
7.1 A Product Formula for the Index	15
7.2 The Product Formula for Rotations	17
7.3 The Leray-Schauder Lemma	18
7.4 Direct Sum of Vector Fields	19
7.5 A Theorem on Reducible Vector Fields	21
7.6 The Sum Formula for Rotations	22

§ 8.	Periodic and Odd Vector Fields	22
8.1	Periodic Mappings	22
8.2	The Congruence Theorem	23
8.3	A Special Case	25
8.4	Odd and Even Vector Fields	26
8.5	A General Theorem	28
8.6	Vector Fields Which are Symmetric With Respect to a Subspace	29
§ 9.	Special Coverings of Spheres	30
9.1	The Genus of a Set	30
9.2	Genus With Respect to Periodic Mappings	32
9.3	Deformations Along Great Circles	32
9.4	Proof of Theorem 9.3	34
§ 10.	Homogeneous Polynomials	35
10.1	Parity of Rotation	35
10.2	Homogeneous Fields in the Plane	36
10.3	Quadratic Fields	37
§ 11.	Smooth Vector Fields	38
11.1	Positive Vector Fields	38
11.2	Analytic Fields in Complex Spaces	39
11.3	Singular Points of Analytic Fields	40
§ 12.	Gradient Fields	40
12.1	The Index of a Nonsingular Potential	40
12.2	Quadratic Potentials	41
12.3	Odd and Even Potentials	41
12.4	Homogeneous Potentials	42
12.5	Coercive Potentials	43
§ 13.	Periodic and Bounded Solutions of Differential Equations	45
13.1	The Setting of the Problem	45
13.2	The Translation Operator	46
13.3	Guiding Functions	47
13.4	Existence of Periodic Solutions	48
13.5	The Index of Periodic Solutions	49
13.6	Regular Guiding Functions	50
13.7	Examples	53
13.8	Existence of Solutions Which are Bounded on the Whole Axis	56
13.9	General Boundary Value Problems	56
§ 14.	Construction of Guiding Functions	57
14.1	Homogeneous Systems	57
14.2	Planar Systems	58
14.3	Equations With Polynomial Right-Hand Side	59
14.4	Periodic and Bounded Solutions	61
§ 15.	The Index of a Singular Point of a Planar Vector Field	62
15.1	General Theorems	62
15.2	Simple Singular Rays	63
15.3	Multiple Singular Rays (Noncritical Case)	64

15.4	Multiple Singular Rays (Critical Case)	65
15.5	A Geometrical Scheme	67
15.6	The Order of Nondegeneracy	68
Chapter 2. Completely Continuous Vector Fields		70
§ 16.	Continuous Fields in Infinite Dimensional Spaces	70
16.1	Continuous Deformations of Fields	70
16.2	Contractions of Spheres	71
16.3	Leray's Example	72
16.4	Kakutani's Example	73
16.5	Passing to Smaller Classes of Vector Fields	73
§ 17.	Completely Continuous Operators	73
17.1	Definitions	73
17.2	Spaces and Operators	74
17.3	Linear Integral Operators	74
17.4	Spectral Properties of Completely Continuous Linear Operators	75
17.5	The Fréchet Derivative	76
17.6	Taylor's Formula	78
17.7	The Substitution Operator	81
17.8	The Hammerstein Operator	82
17.9	The General Nonlinear Integral Operator	83
17.10	Asymptotic Derivatives of Integral Operators	84
§ 18.	Finite Dimensional Approximations	85
18.1	Projections on Convex Sets	85
18.2	Remarks	88
18.3	Finite Dimensional Approximation of Operators	88
18.4	The Schauder Projections	89
18.5	Extensions of Completely Continuous Operators	89
18.6	Extensions With a Finite Number of Fixed Points	90
§ 19.	Homotopy for Completely Continuous Vector Fields	92
19.1	Definitions	92
19.2	Homotopy Criteria	93
19.3	A Remark on the Definition of Homotopy	94
19.4	Uniformly Nonsingular Homotopies	95
19.5	Finite Dimensional Approximations for Compact Deformations	95
19.6	A Special Criterion for Homotopy	97
§ 20.	Rotation of Completely Continuous Vector Fields	98
20.1	Rotation of Fields With Finite Dimensional Operators	98
20.2	The Definition in the General Case	99
20.3	Properties of Rotation	100
20.4	Existence of Singular Points	101
20.5	Generalization of Hopf's Theorem	102
20.6	Fields With Zero Rotation	103
§ 21.	Linear and Almost Linear Completely Continuous Fields	104
21.1	Rotation of Linear Fields	104
21.2	Asymptotically Linear Fields	105
21.3	One-sided Estimates	106

21.4	Computing the Index of a Regular Fixed Point	108
21.5	Fields With $\{B_1, B_2\}$ -Quasilinear Operators	109
21.6	Coercive Differentiable Fields	111
21.7	A Special Case	113
21.8	Odd Fields	114
§ 22.	Product of Rotations	115
22.1	The Product Formula for Indices	115
22.2	The Product Formula for Rotations of Vector Fields	116
22.3	Vector Fields on a Direct Sum of Subspaces	117
22.4	Homeomorphisms and Completely Continuous Fields	118
22.5	Homeomorphisms on Boundaries of Domains	119
§ 23.	Smooth Completely Continuous Vector Fields	119
23.1	Smale's Theorem	119
23.2	Positively Oriented Completely Continuous Vector Fields	121
23.3	Completely Continuous Analytic Vector Fields	122
§ 24.	Computing the Index of a Singular Point in Critical Cases	123
24.1	The Setting of the Problem and Notations	123
24.2	The Case of a Simple Critical Point	124
24.3	The General Case	127
24.4	Fields With Analytic Principal Part	130
24.5	The Simple Critical Case	132
24.6	The General Critical Case	132
24.7	The Method of Successive Substitutions	134
24.8	Another Reduction Principle	135
Chapter 3.	Principles of Relatedness	136
§ 25.	Invariance Principles for the Rotation	137
25.1	Domains With a Common Core	137
25.2	A Counter-Example	137
25.3	Linear Fields	137
25.4	Some Basic Lemmata	138
25.5	Invariance Principles	141
§ 26.	Composition of Operators	143
26.1	The Setting of the Problem	143
26.2	The Main Theorem	144
26.3	Generalizations	144
26.4	Equivalent Conditions	146
26.5	Choice of a New Norm	147
26.6	The Index of a Singular Point for Iterates of Operators	147
§ 27.	Transition to Equations in a Subspace	148
27.1	The Setting of the Problem	148
27.2	A Lemma on the Index	149
27.3	The Principle of Relatedness	150
§ 28.	Forced Vibrations	151
28.1	A Periodic Boundary Value Problem	151
28.2	Transformations of Related Equations	153

28.3	Integral Equations	156
28.4	Change of Space	158
28.5	The Translation Field and the Basic Theorem	161
28.6	Applications of Guiding Functions	164
28.7	Equations in Banach Spaces	165
§ 29.	Boundary Value Problems	167
29.1	Periodic Problems	167
29.2	Construction of Equivalent Integral Equations	167
29.3	Integro-Differential Equations	168
29.4	The Principle of Relatedness for Periodic Problems	169
29.5	A General Boundary Value Problem	170
29.6	A General Principle of Relatedness	171
29.7	Remarks	173
§ 30.	The Principle of Relatedness for Elliptic Equations	173
30.1	Linear Equations	173
30.2	Nonlinear Equations	174
30.3	Theorems on the Equality of Rotations	175
30.4	The Principle of Relatedness	176
30.5	Generalizations	178
§ 31.	Vector Fields Involving Iterated Operators	179
31.1	A General Theorem	179
31.2	Passage to a Finite Dimensional Subspace	179
31.3	Passage to Smooth Mappings	180
31.4	Completion of the Proof	182
31.5	Consequences and Generalizations	183
Chapter 4.	Fields With Noncompact Operators	185
§ 32.	The Method of Partial Redefinition of Operators	185
32.1	Compactly Supported Operators	185
32.2	Measures of Noncompactness	187
32.3	Fields With Condensing Operators	189
32.4	Computing the Rotation: Examples	191
32.5	Limit Compact Operators	192
§ 33.	Fields With Positive Operators	193
33.1	Cones and Partial Orderings	193
33.2	Positive Linear Operators	194
33.3	Nonlinear Positive Operators	195
33.4	Rotation of Fields With Positive Operators	195
33.5	Computing the Rotation	197
33.6	Computing the Index of a Singular Point	199
33.7	A Perturbation Result	200
33.8	Remarks	201
§ 34.	The Method of Partial Inversion	202
34.1	Fields With Invertible Operators	202
34.2	Quasirotaion for Partially Invertible Fields	203
34.3	Contractions	205
34.4	An Important Example	208

34.5	A Generalization	209
34.6	Rotation mod 2	210
34.7	A Lemma on Linear Fredholm Operators	211
34.8	Nonlinear Fredholm Mappings	213
§ 35.	Some Generalizations	214
35.1	Approximation Schemes	214
35.2	Frum-Ketkov's Theorem	216
35.3	Operators in Topological Vector Spaces	216
35.4	Other Articles	216
§ 36.	Multivalued Mappings	216
36.1	Upper Semicontinuous Mappings	216
36.2	Rotation for Fields With Multivalued Operators	217
36.3	Fixed Points	218
36.4	Generalizations	218
36.5	Mappings in Quotient Spaces	219
Chapter 5.	Solvability of Nonlinear Equations	221
§ 37.	Invariant Sets and Fixed Points	221
37.1	Generalized Contractions	221
37.2	Schauder's Principle	222
37.3	A Priori Estimates	224
37.4	Completely Continuous Perturbations of Contractions	225
37.5	Nonexpansive Operators	226
37.6	Construction of Invariant Sets	228
37.7	Remarks	230
§ 38.	Fixed Points of Monotone Operators	231
38.1	Monotone Operators	231
38.2	Monotonically Limit Compact Operators	231
38.3	An Example	233
§ 39.	Dissipative Operators	234
39.1	Dissipative Equations	234
39.2	Browder's Principle	235
39.3	Existence of Periodic Solutions	235
39.4	Fixed Points for Dissipative Operators	235
39.5	Existence of a λ -Centre	237
§ 40.	Almost Linear Equations	239
40.1	Equations With Completely Continuous Operators	239
40.2	Equations With Smooth Operators	240
40.3	A Lemma	241
40.4	Covering Maps	242
§ 41.	The Principle of Nonzero Rotation	243
41.1	General Theorems	243
41.2	Operators With Odd Principal Part	244
41.3	Uniqueness of Solutions	245
41.4	Applications of the Principle of Relatedness	246

41.5	Periodic Solutions for Systems With a Retarded Argument	246
41.6	Freezing and Averaging of Coefficients	249
§ 42.	One-Sided Estimates	254
42.1	A General Principle	254
42.2	Positive Linear Operators	255
42.3	Nonlinear Integral Equations With Positive Kernels	258
42.4	Equations With Symmetric Kernels	260
42.5	Variational Methods	261
42.6	Weakened One-Sided Estimates	262
42.7	Monotone Operators in the Sense of Minty-Browder	263
Chapter 6.	Equations With Many Solutions	267
§ 43.	Existence of Nonzero Solutions	267
43.1	General Theorems	267
43.2	A Two-Point Boundary Value Problem	269
43.3	Nonzero Solutions of Variational Problems	273
§ 44.	Expansions and Compressions of Cones	274
44.1	General Theorems	274
44.2	Equations With Weak Nonlinearities	276
44.3	The Cone $K(v^*)$	277
44.4	The First Theorem on Equations With Strong Nonlinearities	278
44.5	The Second Theorem on Equations With Strong Nonlinearities	279
44.6	Nonzero Solutions of Boundary Value Problems	280
§ 45.	Step Function Nonlinearities	281
45.1	A General Theorem	281
45.2	Monotone Nonlinearities	283
45.3	Remarks	285
45.4	Applications to Integral Equations	286
§ 46.	Equations With Concave and Convex Operators	289
46.1	The Setting of the Problem	289
46.2	Concave Operators	290
46.3	Solvability of Equations With Concave Operators	292
46.4	Convex Operators	293
§ 47.	Nonzero Solutions of Parametrized Equations	298
47.1	The Setting of the Problem	298
47.2	A Lemma on Nonhomotopic Fields	300
47.3	Continuous Branches of Solutions	302
47.4	Operators With a Monotone Minorant	303
47.5	The Principle of Topological Closure	307
47.6	Eigenvectors of Concave Operators	309
§ 48.	Connectivity Principles	310
48.1	Normally Solvable Equations	310
48.2	Strongly Smoothable Operators	312
48.3	Equations With Nonexpansive Operators	313
48.4	Equations With Differentiable Operators	314

48.5	The Structure of the Solution Funnel	315
48.6	Remarks	316
Chapter 7. Construction of Solutions		318
§ 49.	The Method of Successive Approximation	318
49.1	Convergence	318
49.2	Equations With Concave Operators	319
49.3	Contractions for Comparable Elements	320
49.4	Equations With Invertible Positive Operators	321
§ 50.	Approximating Equations	324
50.1	The Setting of the Problem	324
50.2	The Method of Galerkin-Petrov	325
50.3	The Ljapunov-Cesari Method	327
50.4	Tonelli's Method	329
50.5	Numerical Quadrature Methods	331
§ 51.	Error Estimates.	334
51.1	The Setting of the Problem	334
51.2	A General Scheme	334
51.3	Remarks	336
§ 52.	The Index of a Stable Solution	337
52.1	Successive Iterations and Stability	337
52.2	A Criterion for Lack of Asymptotic Stability	340
52.3	Continuous Deformations of Systems With Isolated Equilibrium State	341
52.4	The Index of a Ljapunov-Stable Equilibrium State	342
52.5	Balls With Handles	342
52.6	Remarks	344
Chapter 8. Small Perturbations of Nonlinear Equations		346
§ 53.	Perturbations and Existence Theorems	346
53.1	The Principle of Nonzero Rotation	346
53.2	Weakly Coupled Equations	348
53.3	An Application of the Principles on Relatedness and Invariance of Rotation	349
53.4	On a Class of Boundary Value Problems	350
§ 54.	Perturbations of Isolated Solutions	353
54.1	Solutions With Nonzero Index	353
54.2	The General Implicit Function Theorem	354
54.3	The Bifurcation Equation	355
54.4	(n, m)-Rotation	357
54.5	Systems of Scalar Equations With a Surplus Number of Unknowns	358
54.6	Parametrized Equations	359
54.7	Equations With Completely Continuous Operators	360
§ 55.	Functionalizing the Parameter.	363
55.1	A General Scheme	363
55.2	The Index of a Cycle	364

55.3	Computing the Index of a Cycle	366
55.4	The Theorem on Relatedness	367
55.5	Autonomous Equations With Time-Lag	369
55.6	Remarks	370
§ 56.	The Principle of Changing Index	371
56.1	Bifurcation Points	371
56.2	Necessary Conditions	372
56.3	Sufficient Criteria	372
56.4	Continuous Branches of Nonzero Solutions	374
56.5	Leading Nonlinearities	375
56.6	Critical Loads	376
56.7	Solutions of Large Norm	378
§ 57.	Stability of Critical Values	379
57.1	Eigenvectors of Gradient Operators	379
57.2	Even Functionals	381
57.3	Small Perturbations	381
57.4	Some Lemmata on Weakly Continuous Functionals	382
57.5	Sets of Finite Genus	385
57.6	Stability of Critical Values	387
57.7	Bifurcation Points for Equations With Gradient Operators	391
	References	392
	List of Symbols	402
	Index	404
