PREFACE	111
CONTRIBUTORS	ix
USE OF COMPUTER ALGEBRA FOR DIOPHANTINE AND DIFFERENTIAL EQUATIONS	1
<i>David V. Chudnovsky and Gregory V. Chudnovsky</i>	
1. Computer Algebra and Problems of Diophantine Approximations and Diophantine Geometry in the Function Field Case	2
2. Extremal Methods in the Theory of Diophantine Approximations	19
3. Diophantine Approximations to Various Numbers	34
4. Modular Equations and Approximations to π	40
5. Padé Approximations to Generalized Hypergeometric Functions of Type II	47
6. Measures of Diophantine Approximations for Values of Special G-Functions	55
7. The Arithmetic and Analytic Asymptotics of Padé Approximants	64
8. Differential Algebra Computations	75
References	78
COMPUTER ALGEBRA AND THE HILBERT MODULAR EQUATION	83
<i>Harvey Cohn</i>	
1. Introduction	83
2. The Weber Modular Equation	84
3. Hilbert Modular Functions and Equations	85
4. Theoretical Motivations	87
References	88
SOME CAYLEY EXAMPLES	89
<i>Michael C. Statterey</i>	
1. Introduction	89
2. Semidirect Products	90
3. A Small p -Group Example	94
4. Conclusion	95
References	96

PHYSICS, RAMANUJAN, AND COMPUTER ALGEBRA <i>George E. Andrews</i>	97
1. Introduction	97
2. The Rogers-Ramanujan Identities and the Hard Hexagon Model	98
3. The Rogers-Balley Approach to the Rogers- Ramanujan Identities	102
4. Göllnitz's Theorem	105
5. Conclusion	108
References	108
POLYPAK: AN ALGEBRAIC PROCESSOR FOR COMPUTATIONS IN CELESTIAL MECHANICS <i>Dieter S. Schmidt</i>	111
1. Introduction	111
2. Description of POLYPAK	113
3. Research Projects for Which POLYPAK Has Been Used	118
References	119
COMPUTER ALGEBRA AND DEFINITE INTEGRALS <i>Richard Askey</i>	121
ALGEBRAIC COMPUTATIONS AND STRUCTURES <i>James E. Davenport</i>	129
1. Data Types of Computer Algebra	129
2. Constructive Algebra?	135
References	143
COMPUTATION OF GALOIS GROUPS FROM POLYNOMIALS OVER THE RATIONALS <i>David J. Ford and John McKay</i>	145
1. Introduction	145
2. The Method	146
3. An Example	149
References	150
ON THE USE OF SCRATCHPAD IN THE CONSTRUCTION OF CONVOLUTION ALGORITHMS <i>Louis Auslander and Allan J. Silberger</i>	151
1. Introduction	151
2. Computing Cyclic Convolution on Three Points	152
3. Cyclic Convolution on Nine Points	156
Appendix	159
References	181

AUTOMATED GENERATION OF OPTIMIZED CONVOLUTION ALGORITHMS	183
<i>James W. Cooley</i>	
1. Introduction	183
2. The Uses of SCRATCHPAD-Generated Convolution Algorithms	185
3. Mathematical Background	186
4. Derivation of the $N = 7$ Algorithm	188
5. Post-SCRATCHPAD Processing	194
6. A Suggested Extension of SCRATCHPAD	195
7. Conclusions	196
References	196
MANUAL FOR THE SYSTEM PNCRE	199
<i>Robert Riley</i>	
1. History of P	201
2. Preparation of the P System	205
3. Writing Programs that Call P Subroutines	209
4. The Sample Main Program KNOTS1	220
References	223
PANEL DISCUSSION	225
INDEX	239
