

Claude Chevalley

The Algebraic Theory of Spinors and Clifford Algebras

Collected Works, Volume 2

Editors: Pierre Cartier
Catherine Chevalley

Springer

Contents

THE CONSTRUCTION AND STUDY OF CERTAIN IMPORTANT ALGEBRAS

Preface	3
Conventions	4
CHAPTER I. GRADED ALGEBRAS	5
1. Free Algebras	5
2. Graded Algebras	7
3. Homogeneous Linear Mappings	10
4. Associated Gradations and the Main Involution	11
5. Derivations	13
6. Existence of Derivations in Free Algebras	18
CHAPTER II. TENSOR ALGEBRAS	20
1. Tensor Algebras	20
2. Graded Structure of Tensor Algebras	23
3. Derivations in a Tensor Algebra	27
4. Preliminaries About Tensor Product of Modules	29
5. Tensor Product of Semi-Graded Algebras	32
CHAPTER III. CLIFFORD ALGEBRAS	35
1. Clifford Algebras	35
2. Exterior Algebras	37
3. Structure of the Clifford Algebra when M has a Base ...	38
4. Canonical Anti-Automorphism	43
5. Derivations in the Exterior Algebras; Trace	45
6. Orthogonal Groups and Spinors (a Review)	48
CHAPTER IV. SOME APPLICATIONS OF EXTERIOR ALGEBRAS	52
1. Plücker Coordinates	52
2. Exponential Mapping	53
3. Determinants	57
4. An application to Combinatorial Topology	62

THE ALGEBRAIC THEORY OF SPINORS

INTRODUCTION	67
PRELIMINARIES	69
1. Terminology	69
2. Associative Algebras	70
3. Exterior Algebras	70
CHAPTER I. QUADRATIC FORMS	72
1.1. Bilinear Forms	72
1.2. Quadratic Forms	75
1.3. Special Bases	77
1.4. The Orthogonal Group	79
1.5. Symmetries	83
1.6. Representation of G on the Multivectors	86
CHAPTER II. THE CLIFFORD ALGEBRA	101
2.1. Definition of the Clifford Algebra	101
2.2. Structure of the Clifford Algebra	106
2.3. The Group of Clifford	113
2.4. Spinors (Even Dimension)	119
2.5. Spinors (Odd Dimension)	121
2.6. Imbedded Spaces	122
2.7. Extension of the Basic Field	124
2.8. The Theorem of Hurwitz	125
2.9. Quadratic Forms over the Real Numbers	129
CHAPTER III. FORMS OF MAXIMAL INDEX	134
3.1. Pure Spinors	135
3.2. A Bilinear Invariant	141
3.3. The Tensor Product of the Spin Representation with Itself	148
3.4. The Tensor Product of the Spin Representation with Itself (Characteristic $\neq 2$)	153
3.5. Imbedded Spaces	161
3.6. The Kernels of the Half-Spin Representations	165
3.7. The Case $m = 6$	166
3.8. The Case of Odd Dimension	170
CHAPTER IV. THE PRINCIPLE OF TRIALITY	176
4.1. A New Characterization of Pure Spinors	177
4.2. Construction of an Algebra	177
4.3. The Principle of Triality	181
4.4. Geometric Interpretation	185
4.5. The Octonions	187

CONTENTS	xiii
BOOK REVIEW (J. DIEUDONNÉ)	193
SPINORS IN 1995 (J.-P. BOURGUIGNON)	199
