Contents

PREFACE	111
CHAPTER 1 PRELIMINARIES	1
1. Set Operations and Functions	1
2. Partitions and Equivalence Relations	17
3. Binary Operations	23
4. The Integers	34
CHAPTER 2 GROUPS	46
1. Groups and Subgroups	46
2. Homomorphisms	71
3. Lagrange's Theorem and the Quotient Set	84
4. Normal Subgroups and the Quotient Group	96
CHAPTER 3 GROUP ACTIONS AND SOLVABLE GROUPS	119
1. Group Actions	119
2. Solvable Groups	133
CHAPTER 4 RINGS	142
1. Rings and Subrings	142
2. Homomorphisms, Ideals, and Quotient Rings	153
3. Maximal Ideals and the Chinese Remainder Theorem	168
4. Prime Ideals, Integral Domains, and the Fraction Field	176
CHAPTER 5 FACTORIZATION IN COMMUTATIVE RINGS	187
1. Euclidean Rings and Principal Ideal Rings	187
2. Primes and Unique Factorization	198
3. Factorization and Noetherian Domains	204

CHAPTER 6	ALGEBRAS	213
	1. Algebras and Morphisms	213
	2. Polynomials	227
	3. Matrices and Determinants	237
CHAPTER 7	MODULES AND VECTOR SPACES	257
	1. Left R -Modules	257
	2. Direct Products and Direct Sums	270
	3. Vector Spaces	285
CHAPTER 8	FIELD EXTENSIONS	294
	1. Finitely Generated Extensions	294
	2. Algebraic Extensions	313
	3. Splitting Fields, Normal Extensions, and Finite Fields	325
CHAPTER 9	GALOIS THEORY	338
	1. The Fundamental Correspondence	338
	2. The Fundamental Theorem of Galois Theory	360
	3. Solvability by Radicals	376
APPENDIX A	ZORN'S LEMMA	390
APPENDIX B	CATEGORIES AND FUNCTORS	392
