Local representation theory

Modular representations as an introduction to the local representation theory of finite groups

J. L. ALPERIN

CAMBRIDGE
UNIVERSITY PRESS

Contents

	Preface	*page* ix
I	**Semisimple modules**	
1	Simple modules	1
2	Simple algebras	7
3	Group algebras	12
II	**Projective modules**	
4	Indecomposable modules	21
5	Free modules	28
6	Duality	38
7	Tensor products	45
III	**Modules and subgroups**	
8	Induced modules	54
9	Vertices and sources	65
10	Trivial intersections	70
11	Green correspondence	79
12	Maps	84
IV	**Blocks**	
13	Defect groups	92
14	Brauer correspondence	101
15	Canonical module	105
16	Subpairs	112

V Cyclic blocks
17 Brauer trees 118
18 Nilpotent blocks 128
19 Local case 134
20 Projective covers 143
21 Simple modules 150
22 Brauer graph 159
23 Trees 166
24 Multiplicity 169

A guide to further reading 174
