Theory of Group Representations

Translated by Elizabeth Hewitt
Translation Editor Edwin Hewitt

With 3 Figures

Springer-Verlag
New York Heidelberg Berlin

Contents

Chapter I

Algebraic Foundations of Representation Theory

§1 Fundamental Concepts of Group Theory	1
§2 Fundamental Concepts and the Simplest Propositions of Representation Theory	23

Chapter II

Representations of Finite Groups

§1 Basic Propositions of the Theory of Representations of Finite Groups	60
§2 The Group Algebra of a Finite Group	80
§3 Representations of the Symmetric Group	98
§4 Induced Representations	112
§5 Representations of the Group $SL(2, \mathbb{F}_q)$	118

Chapter III

Basic Concepts of the Theory of Representations of Topological Groups

§1 Topological Spaces	132
§2 Topological Groups	139
§3 Definition of a Finite-Dimensional Representation of a Topological Group; Examples	150
§4 General Definition of a Representation of a Topological Group	158

Chapter IV

Representations of Compact Groups

§1 Compact Topological Groups	165
§2 Representations of Compact Groups	183
§3 The Group Algebra of a Compact Group	211

Chapter V

Finite-Dimensional Representations of Connected Solvable Groups; the Theorem of Lie

§1. Connected Topological Groups	229
§2. Solvable and Nilpotent Groups	238
§3. Lie's Theorem	243

Chapter VI

Finite-Dimensional Representations of the Full Linear Group

§1. Some Subgroups of the Group G	246
§2. Description of the Irreducible Finite-Dimensional Representations of the Group $GL(n, C)$	254
§3. Decomposition of a Finite-Dimensional Representation of the Group $GL(n, C)$ into Irreducible Representations	272

Chapter VII

Finite-Dimensional Representations of the Complex Classical Groups

§1. The Complex Classical Groups	283
§2. Finite-Dimensional Continuous Representations of the Complex Classical Groups	294

Chapter VIII

Covering Spaces and Simply Connected Groups

§1. Covering Spaces	302
§2. Simply Connected Spaces and the Principle of Monodromy	305
§3. Covering Groups	311
§4. Simple Connectedness of Certain Groups	315

Chapter IX

Basic Concepts of Lie Groups and Lie Algebras

§1. Analytic Manifolds	324
§2. Lie Algebras	337
§3. Lie Groups	341

Chapter X

Lie Algebras

§1. Some Definitions	368
§2. Representations of Nilpotent and Solvable Lie Algebras	374

§3. Radicals of a Lie Algebra	381
§4. The Theory of Replicas	384
§5. The Killing Form; Criteria for Solvability and Semisimplicity of a Lie Algebra	388
§6. The Universal Enveloping Algebra of a Lie Algebra	392
§7. Semisimple Lie Algebras	400
§8. Cartan Subalgebras	406
§9. The Structure of Semisimple Lie Algebras	409
§10. Classification of Simple Lie Algebras	427
§11. The Weyl Group of a Semisimple Lie Algebra	449
§12. Linear Representations of Semisimple Complex Lie Algebras	452
§13. Characters of Finite-Dimensional Irreducible Representations of a Semisimple Lie Algebra	458
§14. Real Forms of Semisimple Complex Lie Algebras	478
§15. General Theorems on Lie Algebras	493

Chapter XI

Lie Groups

§1. The Campbell-Hausdorff Formula	497
§2. Cartan's Theorem	507
§3. Lie's Third Theorem	512
§4. Some Properties of Lie Groups in the Large	517
§5. Gauss's Decomposition	527
§6. Iwasawa's Decomposition	533
§7. The Universal Covering Group of a Semisimple Compact Lie Group	540
§8. Complex Semisimple Lie Groups and Their Real Forms	545

Chapter XII

Finite-Dimensional Irreducible Representations of Semisimple Lie Groups

§1. Representations of Complex Semisimple Lie Groups	552
§2. Representations of Real Semisimple Lie Groups	559
