Contents

Introduction 1

1 Apéritif 5
1.1 Hensel's Analogy 5
1.2 Solving Congruences Modulo p^n 12
1.3 Other Examples 17

2 Foundations 21
2.1 Absolute Values on a Field 21
2.2 Basic Properties 27
2.3 Topology 30
2.4 Algebra 37

3 p-adic Numbers 41
3.1 Absolute Values on $\mathbb{Q}$ 41
3.2 Completions 47
3.3 Exploring $\mathbb{Q}_p$ 57
3.4 Hensel's Lemma 67
3.5 Local and Global 75

4 Elementary Analysis in $\mathbb{Q}_p$ 85
4.1 Sequences and Series 86
4.2 Functions, Continuity, Derivatives 90
4.3 Power Series 93
4.4 Functions Defined by Power Series 100
4.5 Some Elementary Functions 109
4.6 Interpolation 124

5 Vector Spaces and Field Extensions 131
5.1 Normed Vector Spaces over Complete Valued Fields 132
5.2 Finite-dimensional Normed Vector Spaces 137
5.3 Finite Field Extensions 141
5.4 Properties of Finite Extensions 156
5.5 Analysis 167
5.6 Example: Adjoining a p-th Root of Unity 169
5.7 On to $\mathbb{C}_p$ 174

6 Analysis in $\mathbb{C}_p$ 185
6.1 Almost Everything Extends 185
6.2 Deeper Results on Polynomials and Power Series 189
6.3 Entire Functions 206
6.4 Newton Polygons 210
6.5 Problems 229

A Hints and Comments on the Problems 233

B A Brief Glance at the Literature 287
B.1 Texts 287
B.2 Software 288
B.3 Other Books 289
