Contents of *Basic Algebra I* x

Preface xiii

Preface to the First Edition xv

## INTRODUCTION 1

- 0.1 Zorn's lemma 2
- 0.2 Arithmetic of cardinal numbers 3
- 0.3 Ordinal and cardinal numbers 4
- 0.4 Sets and classes 6
- References 7

## 1 CATEGORIES 8

- 1.1 Definition and examples of categories 9
- 1.2 Some basic categorical concepts 15
- 1.3 Functors and natural transformations 18
- 1.4 Equivalence of categories 26
- 1.5 Products and coproducts 32
- 1.6 The hom functors. Representable functors 37
- 1.7 Universals 40
- 1.8 Adjoints 45
- References 51

## 2 UNIVERSAL ALGEBRA 52

- 2.1  $\Omega$ -algebras 53
- 2.2 Subalgebras and products 58
- 2.3 Homomorphisms and congruences 60
- 2.4 The lattice of congruences. Subdirect products 66

2.5	Direct and inverse limits	70
2.6	Ultraproducts	75
2.7	Free $\Omega$ -algebras	78
2.8	Varieties	81
2.9	Free products of groups	87
2.10	Internal characterization of varieties	91
	References	93

### 3 MODULES 94

3.1	The categories $R\text{-mod}$ and $\text{mod-}R$	95
3.2	Artinian and Noetherian modules	100
3.3	Schreier refinement theorem, Jordan-Hölder theorem	104
3.4	The Krull-Schmidt theorem	110
3.5	Completely reducible modules	117
3.6	Abstract dependence relations, Invariance of dimensionality	122
3.7	Tensor products of modules	125
3.8	Bimodules	133
3.9	Algebras and coalgebras	137
3.10	Projective modules	148
3.11	Injective modules, Injective hull	156
3.12	Morita contexts	164
3.13	The Wedderburn-Artin theorem for simple rings	171
3.14	Generators and progenerators	173
3.15	Equivalence of categories of modules	177
	References	183

### 4 BASIC STRUCTURE THEORY OF RINGS 184

4.1	Primitivity and semi-primitivity	185
4.2	The radical of a ring	192
4.3	Density theorems	197
4.4	Artinian rings	202
4.5	Structure theory of algebras	210
4.6	Finite dimensional central simple algebras	215
4.7	The Brauer group	226
4.8	Clifford algebras	228
	References	245

### 5 CLASSICAL REPRESENTATION THEORY OF FINITE GROUPS 246

5.1	Representations and matrix representations of groups	247
5.2	Complete reducibility	251
5.3	Application of the representation theory of algebras	257
5.4	Irreducible representations of $S_n$	265

- 5.5 Characters. Orthogonality relations 269
- 5.6 Direct products of groups. Characters of abelian groups 279
- 5.7 Some arithmetical considerations 282
- 5.8 Burnside's  $p^a q^b$  theorem 284
- 5.9 Induced modules 286
- 5.10 Properties of induction. Frobenius reciprocity theorem 292
- 5.11 Further results on induced modules 299
- 5.12 Brauer's theorem on induced characters 305
- 5.13 Brauer's theorem on splitting fields 313
- 5.14 The Schur index 314
- 5.15 Frobenius groups 317
- References 325

## 6 ELEMENTS OF HOMOLOGICAL ALGEBRA WITH APPLICATIONS 326

- 6.1 Additive and abelian categories 327
- 6.2 Complexes and homology 331
- 6.3 Long exact homology sequence 334
- 6.4 Homotopy 337
- 6.5 Resolutions 339
- 6.6 Derived functors 342
- 6.7 Ext 346
- 6.8 Tor 353
- 6.9 Cohomology of groups 355
- 6.10 Extensions of groups 363
- 6.11 Cohomology of algebras 370
- 6.12 Homological dimension 375
- 6.13 Koszul's complex and Hilbert's syzygy theorem 378
- References 387

## 7 COMMUTATIVE IDEAL THEORY: GENERAL THEORY AND NOETHERIAN RINGS 388

- 7.1 Prime ideals. Nil radical 389
- 7.2 Localization of rings 393
- 7.3 Localization of modules 397
- 7.4 Localization at the complement of a prime ideal.  
Local-global relations 400
- 7.5 Prime spectrum of a commutative ring 403
- 7.6 Integral dependence 408
- 7.7 Integrally closed domains 412
- 7.8 Rank of projective modules 414
- 7.9 Projective class group 419
- 7.10 Noetherian rings 420
- 7.11 Commutative artinian rings 425

- 7.12 Affine algebraic varieties. The Hilbert Nullstellensatz 427
- 7.13 Primary decompositions 433
- 7.14 Artin-Rees lemma. Krull intersection theorem 440
- 7.15 Hilbert's polynomial for a graded module 443
- 7.16 The characteristic polynomial of a noetherian local ring 448
- 7.17 Krull dimension 450
- 7.18  $I$ -adic topologies and completions 455
- References 462

## 8 FIELD THEORY 463

- 8.1 Algebraic closure of a field 464
- 8.2 The Jacobson-Bourbaki correspondence 468
- 8.3 Finite Galois theory 471
- 8.4 Crossed products and the Brauer group 475
- 8.5 Cyclic algebras 484
- 8.6 Infinite Galois theory 486
- 8.7 Separability and normality 489
- 8.8 Separable splitting fields 495
- 8.9 Kummer extensions 498
- 8.10 Rings of Witt vectors 501
- 8.11 Abelian  $p$ -extension 509
- 8.12 Transcendence bases 514
- 8.13 Transcendence bases for domains. Affine algebras 517
- 8.14 Luroth's theorem 520
- 8.15 Separability for arbitrary extension fields 525
- 8.16 Derivations 530
- 8.17 Galois theory for purely inseparable extensions of exponent one 541
- 8.18 Tensor products of fields 544
- 8.19 Free composites of fields 550
- References 556

## 9 VALUATION THEORY 557

- 9.1 Absolute values 558
- 9.2 The approximation theorem 562
- 9.3 Absolute values on  $\mathbb{Q}$  and  $F(x)$  564
- 9.4 Completion of a field 566
- 9.5 Finite dimensional extensions of complete fields.  
The archimedean case 569
- 9.6 Valuations 573
- 9.7 Valuation rings and places 577
- 9.8 Extension of homomorphisms and valuations 580
- 9.9 Determination of the absolute values of a finite  
dimensional extension field 585
- 9.10 Ramification index and residue degree. Discrete valuations 588
- 9.11 Hensel's lemma 592
- 9.12 Local fields 595

- 9.13 Totally disconnected locally compact division rings 599
- 9.14 The Brauer group of a local field 608
- 9.15 Quadratic forms over local fields 611
- References 618

## 10 DEDEKIND DOMAINS 619

- 10.1 Fractional ideals, Dedekind domains 620
- 10.2 Characterizations of Dedekind domains 625
- 10.3 Integral extensions of Dedekind domains 631
- 10.4 Connections with valuation theory 634
- 10.5 Ramified primes and the discriminant 639
- 10.6 Finitely generated modules over a Dedekind domain 643
- References 649

## 11 FORMALLY REAL FIELDS 650

- 11.1 Formally real fields 651
- 11.2 Real closures 655
- 11.3 Totally positive elements 657
- 11.4 Hilbert's seventeenth problem 660
- 11.5 Pfister theory of quadratic forms 663
- 11.6 Sums of squares in  $R(x_1, \dots, x_n)$ ,  $R$  a real closed field 669
- 11.7 Artin-Schreier characterization of real closed fields 674
- References 677

## INDEX 679
