CONTENTS

Introduction	7
Chapter 1. Systems of linear equations. Determinants	15
1. The Method of Successive Elimination of Unknowns	15
2. Determinants of Second and Third Order	22
3. Arrangements and Permutations	27
4. Determinants of n th Order	36
5. Minors and Their Cofactors	43
6. Evaluating Determinants	46
7. Cramer's Rule	53
Chapter 2. Systems of linear equations (general theory)	59
8. n -Dimensional Vector Space	59
9. Linear Dependence of Vectors	62
10. Rank of a Matrix	69
11. Systems of Linear Equations	76
12. Systems of Homogeneous Linear Equations	82
Chapter 3. The algebra of matrices	87
13. Matrix Multiplication	87
14. Inverse Matrices	93
15. Matrix Addition and Multiplication of a Matrix by a Scalar	99
16. An Axiomatic Construction of the Theory of Determinants	103
Chapter 4. Complex numbers	110
17. The System of Complex Numbers	110
18. A Deeper Look at Complex Numbers	112
19. Taking Roots of Complex Numbers	120
Chapter 5. Polynomials and their roots	126
20. Operations on Polynomials	126
21. Divisors. Greatest Common Divisor	131
22. Roots of Polynomials	139
23. Fundamental Theorem	142
24. Corollaries to the Fundamental Theorem	151
25. Rational Fractions	156
Chapter 6. Quadratic forms	161
26. Reducing a Quadratic Form to Canonical Form	161
27. Law of Inertia	169
28. Positive Definite Forms	174
Chapter 7. Linear spaces	178
29. Definition of a Linear Space. An Isomorphism	178
30. Finite-Dimensional Spaces. Bases	182
31. Linear Transformations	188
32. Linear Subspaces	195
33. Characteristic Roots and Eigenvalues	199

Chapter 8. Euclidean spaces	204
34. Definition of a Euclidean Space. Orthonormal Bases	204
35. Orthogonal Matrices, Orthogonal Transformations	210
36. Symmetric Transformations	215
37. Reducing a Quadratic Form to Principal Axes. Pairs of Forms	219
Chapter 9. Evaluating roots of polynomials	225
38. Equations of Second, Third and Fourth Degree	225
39. Bounds of Roots	232
40. Sturm's Theorem	238
41. Other Theorems on the Number of Real Roots	244
42. Approximation of Roots	250
Chapter 10. Fields and polynomials	257
43. Number Rings and Fields	257
44. Rings	260
45. Fields	267
46. Isomorphisms of Rings (Fields). The Uniqueness of the Field of Complex Numbers	272
47. Linear Algebra and the Algebra of Polynomials over an Arbitrary Field	276
48. Factorization of Polynomials into Irreducible Factors	281
49. Theorem on the Existence of a Root	290
50. The Field of Rational Fractions	297
Chapter 11. Polynomials in several unknowns	303
51. The Ring of Polynomials in Several Unknowns	303
52. Symmetric Polynomials	312
53. Symmetric Polynomials Continued	319
54. Resultant. Elimination of Unknown. Discriminant	329
55. Alternative Proof of the Fundamental Theorem of the Algebra of Complex Numbers	337
Chapter 12. Polynomials with rational coefficients	341
56. Reducibility of Polynomials over the Field of Rationals	341
57. Rational Roots of Integral Polynomials	345
58. Algebraic Numbers	349
Chapter 13. Normal form of a matrix	355
59. Equivalence of λ -matrices	355
60. Unimodular λ -matrices. Relationship Between Similarity of Numerical Matrices and the Equivalence of their Characteristic Matrices	362
61. Jordan Normal Form	370
62. Minimal Polynomials	377
Chapter 14. Groups	382
63. Definition of a Group. Examples	382
64. Subgroups	388
65. Normal Divisors, Factor Groups, Homomorphisms	394
66. Direct Sums of Abelian Groups	399
67. Finite Abelian Groups	406
Bibliography	414
Index	416
