Contents

Introduction	vii
Homologically finite subcategories M. Auslander and I. Reiten	1
Global generatedness version of rings of pure global dimension zero G. Azumaya	43
Projective resolutions and degree shifting for cohomology and group rings J. F. Carlson	80
Modules of finite length over their endomorphism rings W. Crawley-Boevey	127
Pairs of semi-simple algebras (hereditary algebras with radical-square zero) V. Dlab	185
The module theoretical approach to quasi-hereditary algebras V. Dlab and C. M. Ringel	200
Matrix problems, small reduction and representations of a class of mixed Lie groups Yu. A. Drozd	225
Classification problems for modular group representations K. Erdmann	250
Lie algebras (arising in representation theory) C. M. Ringel	284
