CONTENTS

INTRODUCTION	9
1. Variational principles	9
2. Sufficient conditions.	10
3. Generalizations	15
<i>Chapter I. VARIATIONAL PRINCIPLES OF THE THEORY OF CON-</i> <i>FORMAL MAPPING</i>	16
1.1. The principles of Lindelöf and Montel	16
1.1.1. The case of the circle.	16
1.1.2. Mapping on to a strip	19
1.2. Mechanical interpretation.	20
1.3. Quantitative estimates	21
<i>Chapter II. BEHAVIOUR OF A CONFORMAL TRANSFORMATION</i> <i>ON THE BOUNDARY</i>	26
2.1. Derivatives at the boundary	26
2.2. Narrow strips	29
2.3. Behaviour of the extension at points of maximum inclination and extreme curvature	36
<i>Chapter III. HYDRODYNAMIC APPLICATIONS</i>	42
3.1. Stream line flow.	42
3.2. Generalizations	44
3.3. Stream line flow with detachment	45
3.4. Wave motions of a fluid	49
3.5. The linear theory of waves	51
3.6. Rayleigh waves	55

3.7. The exact theory	64
3.8. Generalizations	69
3.8.1. Motion of a fluid over a submarine trench	69
3.8.2. Motion over a bottom with a ridge.	70
3.8.3. Spillway with singularities	71
<i>Chapter IV. QUASI-CONFORMAL MAPPINGS</i>	<i>72</i>
4.1. The concept of the quasi-conformal map	72
4.2. Derivative systems.	78
4.3. Strong ellipticity.	83
<i>Chapter V. LINEAR SYSTEMS.</i>	<i>90</i>
5.1. Transformations with bounded distortion	90
5.1.1. Equi-graded continuity.	91
5.1.2. Almost conformal mappings.	94
5.2. The simplest class of linear systems	98
5.2.1. Invariance with respect to conformal mappings.	99
5.2.2. Stability of conformal mappings.	100
5.2.3. Condition of smoothness of a transformation	102
5.2.4. Application to arbitrary linear systems	110
5.2.5. Existence theorem.	112
<i>Chapter VI. THE SIMPLEST CLASSES OF NON-LINEAR SYSTEMS</i>	<i>118</i>
6.1. Maximum principle	119
6.2. The principle of Schwarz-Lindelöf	120
6.3. Quantitative estimates	127
6.4. Inductive proof of Lindelöf's principle	132
6.5. The existence theorem	136
6.6. Generalizations	140
6.7. Hydrodynamic applications	141
