

Randall J. LeVeque
**Numerical Methods
for Conservation Laws**

Second Edition

Birkhauser Basel

Author's address:

Randall J. LeVeque
Department of Mathematics, GN-50
University of Washington
Seattle, WA 98195
USA

A CIP catalogue record for this book is available from the
Library of Congress, Washington D.C., USA

Deutsche Bibliothek Cataloging-in-Publication Data

LeVeque, Randall J.:

Numerical methods for conservation laws / Randall J. LeVeque.

Springer Basel AG, 1992

(Lectures in mathematics : ETH Zürich)

ISBN 978-3-7643-2723-1 ISBN 978-3-0348-8629-1 (eBook)

DOI 10.1007/978-3-0348-8629-1

Contents

I	Mathematical Theory	vii
1	Introduction	1
1.1	Conservation laws	1
1.2	Applications	2
1.3	Mathematical difficulties	8
1.4	Numerical difficulties	9
1.5	Some references	12
2	The Derivation of Conservation Laws	14
2.1	Integral and differential forms	14
2.2	Scalar equations	16
2.3	Diffusion	17
3	Scalar Conservation Laws	19
3.1	The linear advection equation	19
3.1.1	Domain of dependence	20
3.1.2	Nonsmooth data	21
3.2	Burgers' equation	23
3.3	Shock formation	25
3.4	Weak solutions	27
3.5	The Riemann Problem	28
3.6	Shock speed	31
3.7	Manipulating conservation laws	34
3.8	Entropy conditions	36
3.8.1	Entropy functions	37
4	Some Scalar Examples	41
4.1	Traffic flow	41
4.1.1	Characteristics and "sound speed"	44
4.2	Two phase flow	48

Contents

5	Some Nonlinear Systems	51
5.1	The Euler equations	51
5.1.1	Ideal gas	53
5.1.2	Entropy	54
5.2	Isentropic flow	55
5.3	Isothermal flow	56
5.4	The shallow water equations	56
6	Linear Hyperbolic Systems	58
6.1	Characteristic variables	58
6.2	Simple waves	60
6.3	The wave equation	60
6.4	Linearization of nonlinear systems	61
6.4.1	Sound waves	63
6.5	The Riemann Problem	64
6.5.1	The phase plane	67
7	Shocks and the Hugoniot Locus	70
7.1	The Hugoniot locus	70
7.2	Solution of the Riemann problem	73
7.2.1	Riemann problems with no solution	75
7.3	Genuine nonlinearity	75
7.4	The Lax entropy condition	76
7.5	Linear degeneracy	78
7.6	The Riemann problem	79
8	Rarefaction Waves and Integral Curves	81
8.1	Integral curves	81
8.2	Rarefaction waves	82
8.3	General solution of the Riemann problem	86
8.4	Shock collisions	88
9	The Riemann problem for the Euler equations	89
9.1	Contact discontinuities	89
9.2	Solution to the Riemann problem	91

II	Numerical Methods	95
10	Numerical Methods for Linear Equations	97
10.1	The global error and convergence	102
10.2	Norms	103
10.3	Local truncation error	104
10.4	Stability	106
10.5	The Lax Equivalence Theorem	107
10.6	The CFL condition	110
10.7	Upwind methods	112
11	Computing Discontinuous Solutions	114
11.1	Modified equations	117
11.1.1	First order methods and diffusion	118
11.1.2	Second order methods and dispersion	119
11.2	Accuracy	121
12	Conservative Methods for Nonlinear Problems	122
12.1	Conservative methods	124
12.2	Consistency	126
12.3	Discrete conservation	128
12.4	The Lax-Wendroff Theorem	129
12.5	The entropy condition	133
13	Godunov's Method	136
13.1	The Courant-Isaacson-Rees method	137
13.2	Godunov's method	138
13.3	Linear systems	140
13.4	The entropy condition	142
13.5	Scalar conservation laws	143
14	Approximate Riemann Solvers	146
14.1	General theory	147
14.1.1	The entropy condition	148
14.1.2	Modified conservation laws	149
14.2	Roe's approximate Riemann solver	149
14.2.1	The numerical flux function for Roe's solver	150
14.2.2	A sonic entropy fix	151
14.2.3	The scalar case	153
14.2.4	A Roe matrix for isothermal flow	156

Contents

15 Nonlinear Stability	158
15.1 Convergence notions	158
15.2 Compactness	159
15.3 Total variation stability	162
15.4 Total variation diminishing methods	165
15.5 Monotonicity preserving methods	165
15.6 l_1 -contracting numerical methods	166
15.7 Monotone methods	169
16 High Resolution Methods	173
16.1 Artificial Viscosity	173
16.2 Flux-limiter methods	176
16.2.1 Linear systems	182
16.3 Slope-limiter methods	183
16.3.1 Linear Systems	187
16.3.2 Nonlinear scalar equations.	188
16.3.3 Nonlinear Systems	191
17 Semi-discrete Methods	193
17.1 Evolution equations for the cell averages	193
17.2 Spatial accuracy	195
17.3 Reconstruction by primitive functions	196
17.4 ENO schemes	198
18 Multidimensional Problems	200
18.1 Semi-discrete methods	201
18.2 Splitting methods	202
18.3 TVD Methods	206
18.4 Multidimensional approaches	206
Bibliography	208
