

Numerical Solution of Partial Differential Equations

An Introduction

K.W. Morton and D.F. Mayers

Computing Laboratory, University of Oxford

CAMBRIDGE
UNIVERSITY PRESS

Contents

1	Introduction	<i>page 1</i>
2	Parabolic equations in one space variable	6
2.1	Introduction	6
2.2	A model problem	6
2.3	Series approximation	8
2.4	An explicit scheme for the model problem	9
2.5	Difference notation and truncation error	11
2.6	Convergence of the explicit scheme	15
2.7	Fourier analysis of the error	19
2.8	An implicit method	22
2.9	The Thomas algorithm	23
2.10	The weighted average or θ -method	25
2.11	A maximum principle and convergence for $\nu(1 - \theta) \leq \frac{1}{2}$	31
2.12	A three-time-level scheme	35
2.13	More general boundary conditions	37
2.14	Heat conservation properties	42
2.15	More general linear problems	44
2.16	Polar co-ordinates	49
2.17	Nonlinear problems	52
	<i>Bibliographic notes</i>	54
	<i>Exercises</i>	54
3	Parabolic equations in two and three dimensions	60
3.1	The explicit method in a rectilinear box	60
3.2	An ADI method in two dimensions	62
3.3	ADI and LOD methods in three dimensions	68
3.4	Curved boundaries	69
3.5	Application to general parabolic problems	78
	<i>Bibliographic notes</i>	80
	<i>Exercises</i>	81

4	Hyperbolic equations in one space dimension	84
4.1	Characteristics	84
4.2	The CFL condition	87
4.3	Error analysis of the upwind scheme	91
4.4	Fourier analysis of the upwind scheme	94
4.5	The Lax-Wendroff scheme	97
4.6	The Lax-Wendroff method for conservation laws	101
4.7	The box scheme	109
4.8	The leap-frog scheme	111
4.9	Comparison of phase and amplitude errors	116
4.10	Boundary conditions and conservation properties	119
4.11	Extensions to more space dimensions	124
	<i>Bibliographic notes</i>	126
	<i>Exercises</i>	126
5	Consistency, convergence and stability	131
5.1	Definition of the problems considered	131
5.2	The finite difference mesh and norms	132
5.3	Finite difference approximations	134
5.4	Consistency, order of accuracy and convergence	136
5.5	Stability and the Lax Equivalence Theorem	137
5.6	Calculating stability conditions	140
5.7	Practical (or strict) stability	145
5.8	Conservation laws and the energy method of analysis	148
5.9	Summary of the theory	156
	<i>Bibliographic notes</i>	159
	<i>Exercises</i>	159
6	Linear second order elliptic equations in two dimensions	163
6.1	A model problem	163
6.2	Error analysis of the model problem	164
6.3	The general diffusion equation	166
6.4	Boundary conditions on a curved boundary	169
6.5	Error analysis using a maximum principle	172
6.6	Asymptotic error estimates	182
6.7	Variational formulation and the finite element method	184
6.8	An example	190
	<i>Bibliographic notes</i>	194
	<i>Exercises</i>	194

Contents

7	Iterative solution of linear algebraic equations	198
7.1	Basic iterative schemes in explicit form	200
7.2	Matrix form of iteration methods and their convergence	202
7.3	Fourier analysis of convergence	207
7.4	Optimal SOR parameters	210
7.5	Application to an example	214
7.6	Extensions and other iterative methods	217
	<i>Bibliographic notes</i>	218
	<i>Exercises</i>	219
	<i>Bibliography</i>	222
	<i>Index</i>	224
