CONTENTS

Introduction. Periodic Functions, Fourier Series	1
I. Almost Periodic Functions	9
1. Definitions and fundamental properties	9
2. Two characteristic properties of almost periodic functions	14
3. The Fourier series associated with an almost periodic function	23
4. Convergence of Fourier series	31
5. Summability of Fourier series	38
6. Almost periodic numeric sequences and their connection with almost periodic functions	45
Bibliographical notes	50
II. Almost Periodic Functions Depending on Parameters	55
1. Almost periodic functions depending uniformly on parameters	55
2. Almost periodic functions in the mean	62
3. Random functions almost periodic in probability	69
III. Analytic Almost Periodic Functions	76
1. Preliminary theorems	76
2. Elementary properties of analytic almost periodic functions	83
3. The Dirichlet series associated with an analytic almost periodic function	87
4. The behavior at infinity of analytic almost periodic functions in a half-plane	93
Bibliographical notes	97
IV. Almost Periodic Solutions of Ordinary Differential Equations.	98
1. The primitive of an almost periodic function.	98
2. Linear systems with constants coefficients	100
3. Quasilinear systems	108

4. An Amerio criterion for almost periodicity of bounded solutions	112
5. The equation of non-linear oscillations	119
Bibliographical notes	124
V. Almost Periodic Solutions of Partial Differential Equations .	128
1. Some properties of harmonic and polyharmonic functions	128
2. Harmonic and polyharmonic almost periodic functions	133
3. Almost periodic solutions of hyperbolic equations	140
4. Almost periodic solutions of certain parabolic equations	144
Bibliographical notes	150
VI. Almost Periodic Functions with Values in Banach Spaces .	153
1. Definitions and general properties	153
2. The Banach space of almost periodic functions	158
3. The Fourier series attached to an almost periodic function with values in a Banach space. The approximation theorem	160
4. Almost periodic functions in the Muckenhoupt sense and in the Stepanov sense	172
5. Weakly almost periodic functions. The primitive of an almost periodic function	175
Bibliographical notes	182
VII. Almost Periodic Functions on Groups	186
1. Elementary properties of almost periodic functions on groups. The existence of the mean	186
2. Unitary representations of groups. The Fourier series associated with an almost periodic function	196
3. The uniqueness and approximation theorems	203
4. Almost periodic functions on topological groups	210
Bibliographical notes	213
Appendix	216
References	221
Index	255
