

DIMACS

Series in Discrete Mathematics
and Theoretical Computer Science

Volume 31

Descriptive Complexity and Finite Models

Proceedings of a DIMACS Workshop
January 14–17, 1996
Princeton University

Neil Immerman
Phokion G. Kolaitis
Editor

NSF Science and Technology Center
in Discrete Mathematics and Theoretical Computer Science
A consortium of Rutgers University, Princeton University,
AT&T Labs, Bell Labs, and Bellcore

American Mathematical Society

Contents

Preface	Neil Immerman and Phokion G. Kolaitis	xi
1. Easier Ways to Win Logical Games	 Ronald Fagin	1
1	Introduction	1
2	Definitions and conventions	3
3	First-order games	5
4	Monadic NP	20
5	Examples	24
6	Some additional comments	27
7	Conclusions	28
2. On the Expression of Graph Properties in some Fragments of Monadic Second-Order Logic	Bruno Courcelle	33
1	Introduction	33
2	Monadic second-order logic	35
3	The definition of orientations by MS_2 formulas	42
4	The elimination of edge quantifications	45
5	It is easier to forbid than to build	50
6	Overview of further topics and open problems	57
3. Finite Models, Automata, and Circuit Complexity	Howard Straubing	63
1	Introduction	63
2	Finite automata	65
3	Circuit complexity	80

4	A logical interpretation of lower bounds	89
4.	Databases and Finite-Model Theory . . . Victor Vianu	97
1	Introduction	97
2	The Database Scenario	98
3	Landscape of Database Theory	102
4	Theory of Query Languages	112
5	The Frontier: New Applications, New Models	124
6	Interaction with Finite-Model Theory	132
7	Conclusion	134
5.	Why Is Modal Logic So Robustly	
	Decidable? Moshe Y. Vardi	149
1	Introduction	149
2	Modal Logic	151
3	Modal Logic vs. First-Order Logic	156
4	Computation Tree Logic	162
5	The Tree-Model Property	169
6.	Model Checking and the	
	Mu-calculus E. Allen Emerson	185
1	Introduction	185
2	The Mu-calculus	187
3	Temporal Logics	191
4	Expressiveness	194
5	Model Checking	197
6	Conclusion	208
7.	Algebraic Propositional Proof	
	Systems Toniann Pitassi	215
1	Introduction	215
2	Algebraic Proof Systems	216
3	Algebraic Size Complexity	220
4	Degree Complexity	227
5	Gröbner Proofs	234
6	Open Problems	236
8.	Program	245
