Contents

INTRODUCTION	xiii
1. ELEMENTARY GEOMETRY AND TRIGONOMETRY	1
1.1. <i>Plane geometry</i>	1
1.1.1. Introduction	1
1.1.2. Parallel lines	1
1.1.3. Triangles	1
1.1.4. Polygons	4
1.1.5. Quadrilaterals	4
1.1.6. Arcs	5
1.1.7. Similarity	6
1.1.8. Circles	8
1.1.9. Units for angles	10
1.2. <i>Coordinate geometry and trigonometry</i>	11
1.2.1. Cartesian coordinates	11
1.2.2. An example	14
1.2.3. Trigonometry	16
1.2.4. The solution of triangles	22
1.2.5. Polar coordinates	23
1.2.6. Changing the axes of Cartesian coordinates	25
1.3. <i>Conics</i>	26
1.3.1. Introduction	26
1.3.2. The ellipse	28
1.3.3. The parabola	30
1.3.4. The hyperbola	31
1.3.5. The general conic	32
2. SOLID GEOMETRY AND SPHERICAL TRIGONOMETRY	37
2.1. <i>Solids</i>	37
2.1.1. Volumes of solids	37
2.1.2. Polyhedra	38
2.1.3. The regular solids	38

2.1.4.	Three-dimensional Cartesian coordinates	40
2.1.5.	Other coordinate systems	41
2.2.	<i>Vectors in three dimensions</i>	43
2.2.1.	Introduction	43
2.2.2.	Parametric vector equations for line and plane	44
2.2.3.	Unit vectors	47
2.2.4.	The scalar product	48
2.2.5.	The vector product	50
2.2.6.	Some examples	52
2.3.	<i>The sphere and spherical trigonometry</i>	54
2.3.1.	The sphere	54
2.3.2.	Spherical trigonometry	55
2.4.	<i>Quadrics</i>	58
2.4.1.	Central quadrics	58
2.4.2.	Non-central quadrics	63
2.5.	<i>Geometry in n dimensions</i>	64
2.5.1.	Vectors in n dimensions	64
2.5.2.	Unit vectors in n dimensions	66
2.5.3.	Lines, planes and hyperplanes	67
3.	<i>CURVE SKETCHING</i>	71
3.1.	<i>Introduction</i>	71
3.2.	<i>Some basic graphs</i>	72
3.2.1.	Power functions	72
3.2.1.	Circular functions	73
3.2.3.	The exponential function	74
3.2.4.	The integer function	75
3.3.	<i>Transformations involving addition or multiplication by a constant</i>	75
3.4.	<i>Other transformations</i>	80
3.5.	<i>Combining graphs</i>	86
3.5.1.	Arithmetic mean	86
3.5.2.	Difference	87
3.5.3.	Sum	87
3.5.4.	Product function	87
3.6.	<i>Some algebraic and analytical techniques</i>	89
3.6.1.	Expression as product	89
3.6.2.	Expression as sum	90
3.6.3.	Symmetries of graphs	90
3.6.4.	Use of calculus	92
3.6.5.	Limits, approximations and asymptotes	92
3.7.	<i>Some important classes of graph</i>	93
3.7.1.	Polynomial functions	93
3.7.2.	Rational functions	93

3.7.3. Algebraic curves	94
3.7.4. Sigmoids	95
3.8. Graphs with parametric equations	96
3.9. Graphs with polar equations	100
3.9.1. Polar coordinates	100
3.9.2. Equations involving trigonometrical functions	100
3.9.3. Spirals	103
4. CONVEXITY	105
4.1. Introduction	105
4.2. Convex sets	106
4.2.1. Definitions and combinatorial properties	106
4.2.2. Separation and decomposition properties	112
4.2.3. Theorems of the alternative	115
4.2.4. Convex polytopes	118
4.3. Convex functions	122
4.3.1. Basic concepts	122
4.3.2. Differentiability properties of convex functions	124
4.4. Convex programming	128
4.4.1. General properties	128
4.4.2. Optimality conditions	131
5. TOPOLOGY	139
5.1. Fixed point theorems	139
5.2. General topology	140
5.2.1. Standard, induced and metrizable topologies	140
5.2.2. Compactness	141
5.2.3. Neighbourhoods	142
5.2.4. Interiors	143
5.2.5. Closed sets	144
5.2.6. Connectedness	144
5.2.7. Bases	145
5.2.8. Product and quotient topologies	146
5.3. Simplexes, complexes and polyhedra	148
5.4. The homology groups	153
5.5. The Lefschetz fixed point formula	155
5.6. Other fixed point theorems	157
5.7. The fundamental group	159
5.7.1. Definition	159
5.7.2. Covering spaces	160
5.7.3. Connection with homology groups	160
5.7.4. Hurewicz theorem	163
5.7.5. Knots	164
5.8. The classification of closed surfaces	165

6. <i>GRAPHS AND NETWORKS</i>	169
6.1. <i>Introduction</i>	169
6.1.1. Some simple graph concepts	170
6.1.2. Matrix representation	172
6.1.3. Connectivity	174
6.2. <i>Trees</i>	175
6.2.1. The shortest spanning tree of a graph	176
6.2.2. Steiner trees	178
6.2.3. Directed trees	179
6.3. <i>Shortest paths</i>	180
6.3.1. Shortest path from s to t	180
6.3.2. Shortest path from s to t (General arc costs)	185
6.3.3. Shortest paths between all vertices (General arc costs)	187
6.4. <i>Flows in networks</i>	187
6.4.1. The maximum flow from s to t	188
6.4.2. Variations of the s to t maximum flow problem	193
6.4.3. Maximum flow between every pair of vertices	194
6.4.4. Minimum cost flow from s to t	195
6.4.5. Flows in graphs with gains	197
6.4.6. Transportation and assignment problems	197
6.5. <i>Matchings</i>	198
6.6. <i>Some other graph problems and their applications</i>	200
6.6.1. The travelling salesman problem	200
6.6.2. Location problems	201
6.6.3. Independent and dominating sets	202
7. <i>TENSORS</i>	207
7.1. <i>Introduction</i>	207
7.2. <i>Cartesian tensors of rank 2</i>	208
7.2.1. Definition	208
7.2.2. Principal axes	210
7.2.3. Vector notation	210
7.2.4. The summation convention	210
7.3. <i>Cartesian tensors of any rank</i>	211
7.4. <i>Cartesian tensors of special form</i>	212
7.4.1. The unit tensor	212
7.4.2. The alternating tensor	212
7.4.3. Symmetric and anti-symmetric tensors	213
7.4.4. Isotropic tensors	213
7.5. <i>Algebra of Cartesian tensors</i>	214
7.5.1. Addition, subtraction and multiplication	214
7.5.2. Contraction	214
7.5.3. Products of vectors	215
7.5.4. Products of tensors of rank 2	215
7.5.5. Identities	216

7.5.6. The quotient rule	216
7.6. Cartesian tensor fields	217
7.6.1. Vector and tensor fields	217
7.6.2. Differentiation of fields	217
7.6.3. Grad, div and curl	218
7.7. General tensor calculus	218
7.8. Tensor fields on manifolds	219
7.8.1. Manifolds	219
7.8.2. Notation	219
7.8.3. Tensors of rank (r, s)	220
7.8.4. Special tensors	223
7.8.5. Tensor algebra	223
7.9. Metric tensor fields	225
7.9.1. Metric tensors and line elements	225
7.9.2. Lengths and angles	226
7.9.3. Associated tensors	226
7.9.4. Indefinite metric tensors	227
7.10. Differentiation	228
7.10.1. Connexions	228
7.10.2. Geodesics	230
7.10.3. Curvature	230
7.11. Cartesian tensors revisited	231
7.11.1. Contravariance and covariance	231
7.11.2. The connexion	232
7.11.3. Pseudo-cartesian tensors of special relativity	232
8. CATASTROPHE THEORY	235
8.1. Shapes in one variable	235
8.2. Shapes in several variables	242
8.3. Determinacy	250
8.4. Unfoldings	256
8.5. Catastrophes	259
8.6. Sample applications	264
8.6.1. Fluid mechanics	264
8.6.2. Collapsing structures	268
8.6.3. Archaeology	272
9. FINITE SPACES AND COMBINATORIAL DESIGNS	277
9.1. Finite fields and finite spaces	277
9.2. Finite planes	282
9.3. Balanced incomplete block designs	282
9.3.1. Symmetric BIBDs	283
9.3.2. Construction of BIBDs	285
9.4. Partially balanced incomplete block designs	289
9.4.1. Construction of PBIBDs	290

9.4.2. PBIBDs with two associate classes	292
9.4.3. PBIBDs with many associate classes	293
9.5. <i>Latin squares</i>	295
9.5.1. Construction of a complete set of Latin squares	296
9.5.2. Graeco-Latin squares	299
9.5.3. Latin squares based on groups	300
9.5.4. Orthogonal arrays	300
9.5.5. Latin rectangles	303
10. PROJECTIVE GEOMETRY	305
10.1. <i>Background and overview</i>	305
10.2. <i>Extended Euclidean geometry</i>	306
10.3. <i>Duality</i>	307
10.4. <i>Coordinates</i>	308
10.4.1. Homogeneous coordinates	308
10.4.2. Equations of lines	308
10.4.3. Equations of points	310
10.5. <i>The projective plane</i>	310
10.5.1. Perspectivities	311
10.5.2. Harmonic sets	313
10.5.3. Projectivities	314
10.5.4. Projectivities on the same line. Involutions	317
10.6. <i>Conic sections</i>	319
10.6.1. Generating conic sections	319
10.6.2. Conic sections and the line at infinity	320
10.6.3. Theorems of Pascal and Brianchon	321
10.7. <i>The projective space</i>	322
10.7.1. Homogeneous coordinates in three dimensions	322
10.7.2. Ruled surfaces	325
10.8. <i>Closing Note</i>	327
