

Anatoly M. Vershik (Ed.)

Asymptotic Combinatorics with Applications to Mathematical Physics

A European Mathematical
Summer School held at the Euler Institute,
St. Petersburg, Russia
July 9-20, 2001

Springer

Contents

Part I Random matrices, orthogonal polynomials and Riemann–Hilbert problem

Asymptotic representation theory and Riemann–Hilbert problem <i>A. Borodin</i>	3
Four Lectures on Random Matrix Theory <i>P. Deift</i>	21
Free Probability Theory and Random Matrices <i>R. Speicher</i>	53

Part II Algebraic geometry, symmetric functions and harmonic analysis

A Noncommutative Version of Kerov’s Gaussian Limit for the Plancherel Measure of the Symmetric Group <i>A. Hora</i>	77
Random trees and moduli of curves <i>A. Okounkov</i>	89
An introduction to harmonic analysis on the infinite symmetric group <i>G. Olshanski</i>	127
Two lectures on the asymptotic representation theory and statistics of Young diagrams <i>A. Vershik</i>	161

Part III Combinatorics and representation theory

Characters of symmetric groups and free cumulants <i>P. Biane</i>	185
--	-----

Algebraic length and Poincaré series on reflection groups with applications to representations theory <i>M. Bożejko and R. Szwarc</i>	201
---	-----

Mixed hook-length formula for degenerate affine Hecke algebras <i>M. Nazarov</i>	223
--	-----
