|---------------------------------------------------------------------------|-----------|
| Preface .....                                                             | V         |
| <b>I – Sets and Functions .....</b>                                       | <b>1</b>  |
| §1. Set Theory .....                                                      | 7         |
| 1 – Membership, equality, empty set .....                                 | 7         |
| 2 – The set defined by a relation. Intersections and unions ...           | 10        |
| 3 – Whole numbers. Infinite sets .....                                    | 13        |
| 4 – Ordered pairs, Cartesian products, sets of subsets .....              | 17        |
| 5 – Functions, maps, correspondences .....                                | 19        |
| 6 – Injections, surjections, bijections .....                             | 23        |
| 7 – Equipotent sets. Countable sets .....                                 | 25        |
| 8 – The different types of infinity .....                                 | 28        |
| 9 – Ordinals and cardinals .....                                          | 31        |
| §2. The logic of logicians .....                                          | 39        |
| <b>II – Convergence: Discrete variables .....</b>                         | <b>45</b> |
| §1. Convergent sequences and series .....                                 | 45        |
| 0 – Introduction: what is a real number? .....                            | 45        |
| 1 – Algebraic operations and the order relation: axioms of $\mathbb{R}$ . | 53        |
| 2 – Inequalities and intervals .....                                      | 56        |
| 3 – Local or asymptotic properties .....                                  | 59        |
| 4 – The concept of limit. Continuity and differentiability ...            | 63        |
| 5 – Convergent sequences: definition and examples .....                   | 67        |
| 6 – The language of series .....                                          | 76        |
| 7 – The marvels of the harmonic series .....                              | 81        |
| 8 – Algebraic operations on limits .....                                  | 95        |
| §2. Absolutely convergent series .....                                    | 98        |
| 9 – Increasing sequences. Upper bound of a set of real numbers            | 98        |
| 10 – The function $\log x$ . Roots of a positive number .....             | 103       |
| 11 – What is an integral? .....                                           | 110       |
| 12 – Series with positive terms .....                                     | 114       |
| 13 – Alternating series .....                                             | 119       |
| 14 – Classical absolutely convergent series .....                         | 123       |
| 15 – Unconditional convergence: general case .....                        | 127       |

|                                                                                 |     |
|---------------------------------------------------------------------------------|-----|
| 16 - Comparison relations, Criteria of Cauchy and d'Alembert                    | 132 |
| 17 - Infinite limits                                                            | 138 |
| 18 - Unconditional convergence: associativity                                   | 139 |
| §3. First concepts of analytic functions                                        | 148 |
| 19 - The Taylor series                                                          | 148 |
| 20 - The principle of analytic continuation                                     | 158 |
| 21 - The function $\cot x$ and the series $\sum 1/n^{2k}$                       | 162 |
| 22 - Multiplication of series. Composition of analytic functions. Formal series | 167 |
| 23 - The elliptic functions of Weierstrass                                      | 178 |
| <b>III - Convergence: Continuous variables</b>                                  | 187 |
| §1. The intermediate value theorem                                              | 187 |
| 1 - Limit values of a function. Open and closed sets                            | 187 |
| 2 - Continuous functions                                                        | 192 |
| 3 - Right and left limits of a monotone function                                | 197 |
| 4 - The intermediate value theorem                                              | 200 |
| §2. Uniform convergence                                                         | 205 |
| 5 - Limits of continuous functions                                              | 205 |
| 6 - A slip up of Cauchy's                                                       | 211 |
| 7 - The uniform metric                                                          | 216 |
| 8 - Series of continuous functions. Normal convergence                          | 220 |
| §3. Bolzano-Weierstrass and Cauchy's criterion                                  | 225 |
| 9 - Nested intervals, Bolzano-Weierstrass, compact sets                         | 225 |
| 10 - Cauchy's general convergence criterion                                     | 228 |
| 11 - Cauchy's criterion for series: examples                                    | 234 |
| 12 - Limits of limits                                                           | 239 |
| 13 - Passing to the limit in a series of functions                              | 241 |
| §4. Differentiable functions                                                    | 244 |
| 14 - Derivatives of a function                                                  | 244 |
| 15 - Rules for calculating derivatives                                          | 252 |
| 16 - The mean value theorem                                                     | 260 |
| 17 - Sequences and series of differentiable functions                           | 265 |
| 18 - Extensions to unconditional convergence                                    | 270 |
| §5. Differentiable functions of several variables                               | 273 |
| 19 - Partial derivatives and differentials                                      | 273 |
| 20 - Differentiability of functions of class $C^1$                              | 276 |
| 21 - Differentiation of composite functions                                     | 279 |
| 22 - Limits of differentiable functions                                         | 284 |
| 23 - Interchanging the order of differentiation                                 | 287 |
| 24 - Implicit functions                                                         | 290 |

|                                                                                    |     |
|------------------------------------------------------------------------------------|-----|
| <b>Appendix to Chapter III</b> .....                                               | 303 |
| 1 - Cartesian spaces and general metric spaces .....                               | 303 |
| 2 - Open and closed sets .....                                                     | 306 |
| 3 - Limits and Cauchy's criterion in a metric space; complete<br>spaces .....      | 308 |
| 4 - Continuous functions .....                                                     | 311 |
| 5 - Absolutely convergent series in a Banach space .....                           | 313 |
| 6 - Continuous linear maps .....                                                   | 316 |
| 7 - Compact spaces .....                                                           | 320 |
| 8 - Topological spaces .....                                                       | 322 |
| <br><b>IV - Powers, Exponentials, Logarithms, Trigonometric Functions</b> .....    | 325 |
| §1. Direct construction .....                                                      | 325 |
| 1 - Rational exponents .....                                                       | 325 |
| 2 - Definition of real powers .....                                                | 327 |
| 3 - The calculus of real exponents .....                                           | 330 |
| 4 - Logarithms to base $a$ . Power functions .....                                 | 332 |
| 5 - Asymptotic behaviour .....                                                     | 333 |
| 6 - Characterisations of the exponential, power and logarithmic<br>functions ..... | 336 |
| 7 - Derivatives of the exponential functions: direct method ..                     | 339 |
| 8 - Derivatives of exponential functions, powers and logarithms                    | 342 |
| §2. Series expansions .....                                                        | 345 |
| 9 - The number $e$ . Napierian logarithms .....                                    | 345 |
| 10 - Exponential and logarithmic series: direct method .....                       | 346 |
| 11 - Newton's binomial series .....                                                | 351 |
| 12 - The power series for the logarithm .....                                      | 359 |
| 13 - The exponential function as a limit .....                                     | 368 |
| 14 - Imaginary exponentials and trigonometric functions ....                       | 372 |
| 15 - Euler's relation <i>chez</i> Euler .....                                      | 383 |
| 16 - Hyperbolic functions .....                                                    | 388 |
| §3. Infinite products .....                                                        | 394 |
| 17 - Absolutely convergent infinite products .....                                 | 394 |
| 18 - The infinite product for the sine function .....                              | 397 |
| 19 - Expansion of an infinite product in series .....                              | 403 |
| 20 - Strange identities .....                                                      | 407 |
| §4. The topology of the functions $\text{Arg}(z)$ and $\text{Log } z$ .....        | 414 |
| <br><b>Index</b> .....                                                             | 425 |
